Markets Report

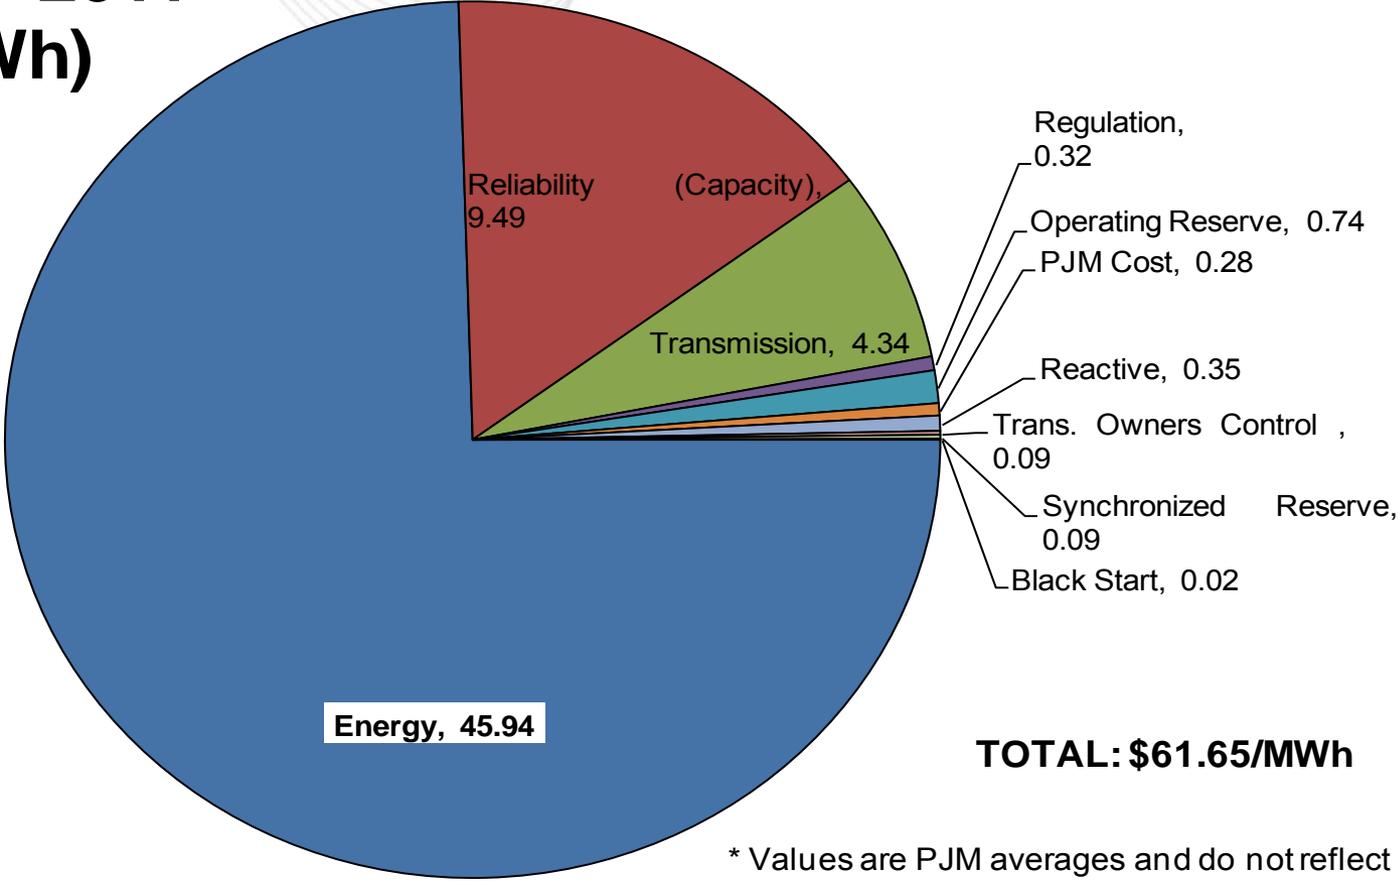

PJM Wholesale Cost Full-Year 2012 (\$/MWh)

* Values are PJM averages and do not reflect potential locational cost differences.

PJM Wholesale Cost Full-Year 2011 (\$/MWh)

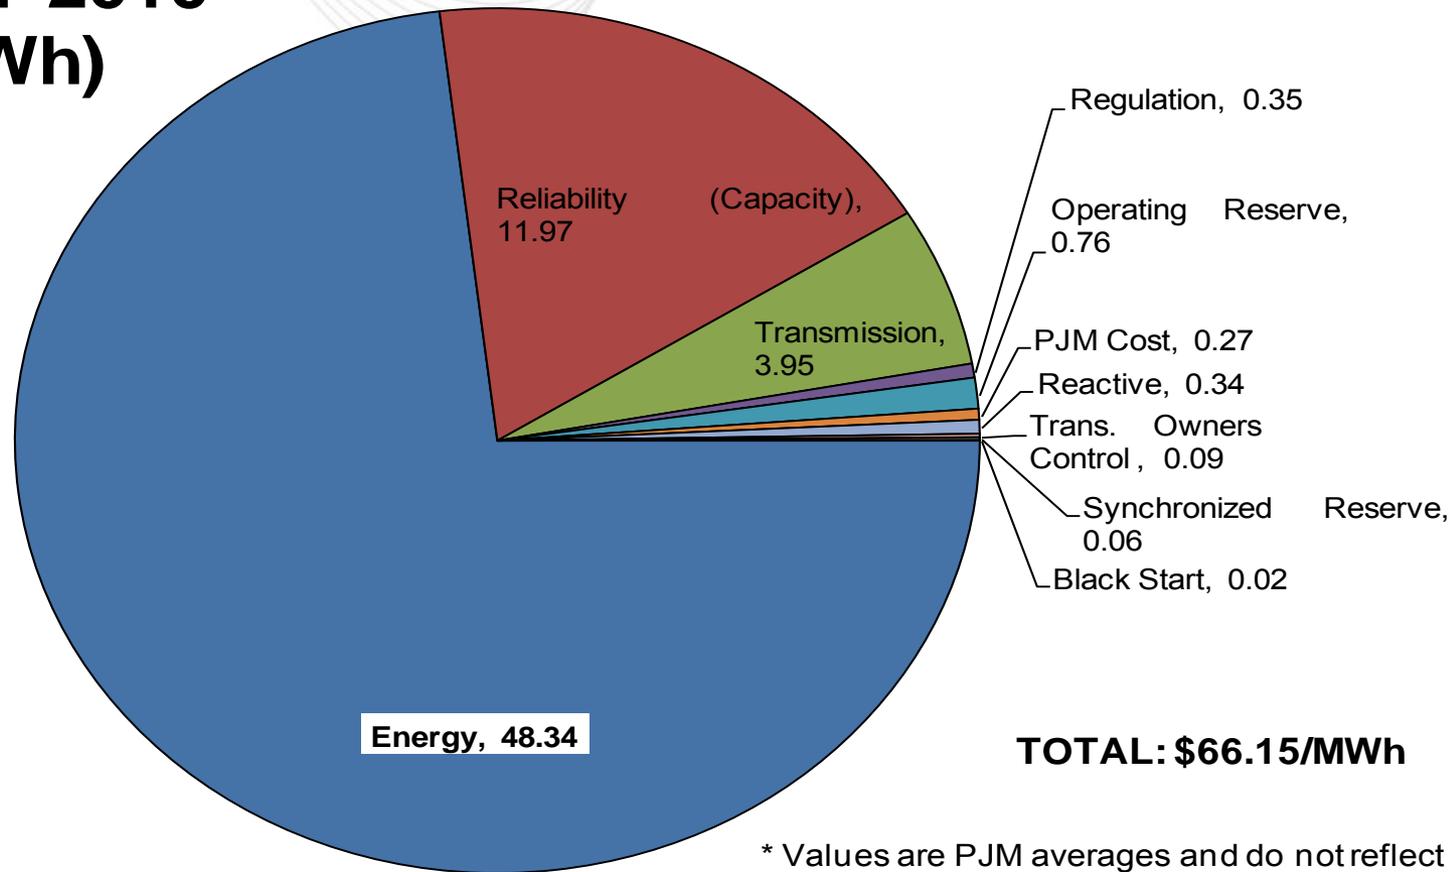

TOTAL: \$61.65/MWh

* Values are PJM averages and do not reflect potential locational cost differences.

PJM Wholesale Cost Full-Year 2010 (\$/MWh)

TOTAL: \$66.15/MWh

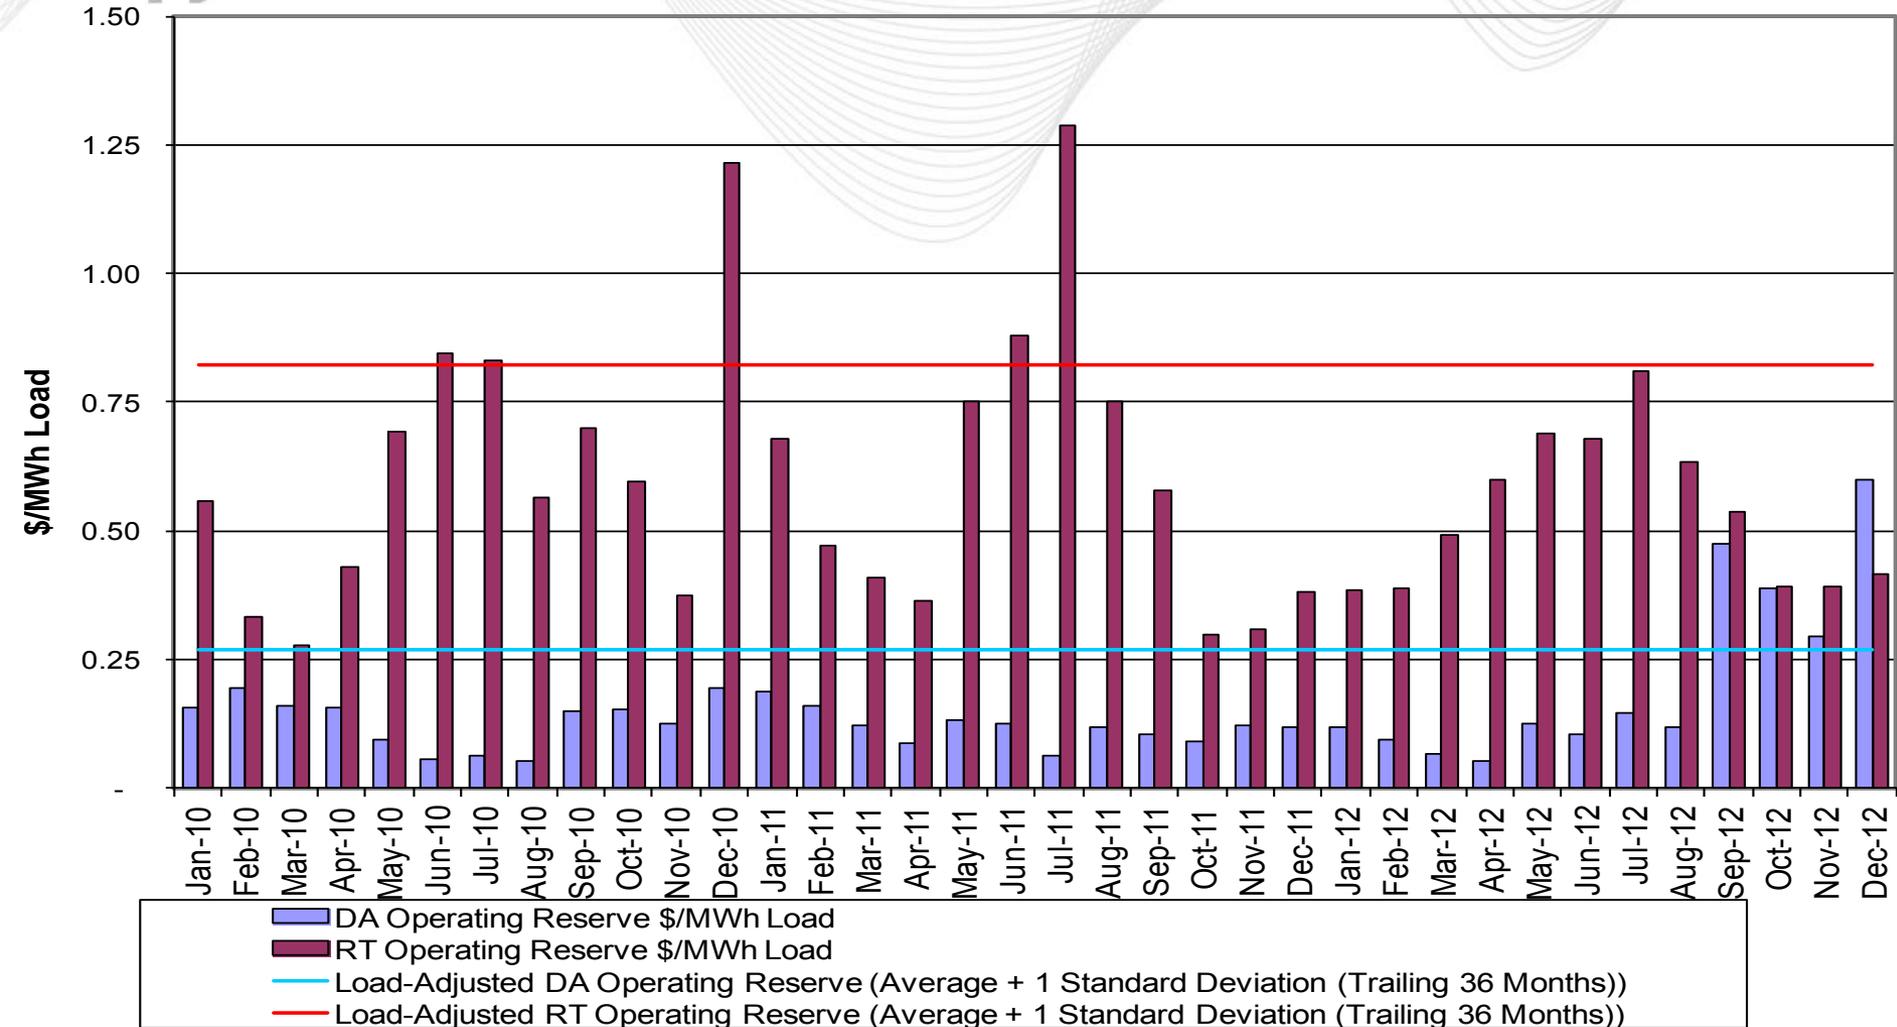

* Values are PJM averages and do not reflect potential locational cost differences.

- Horizontal lines on some of the charts in this report represent average *plus (or minus)* 1 standard deviation of the series for the previous 36 months. They are clearly labeled in the legends.
- The levels represented by these horizontal lines are intended to trigger an explanation by PJM staff when an observation above (or below) the threshold level is registered.
- An observation above (or below) the threshold level does not necessarily imply an extraordinary circumstance, neither does an observation that fails to exceed the threshold level preclude an explanation.
- PJM staff always welcomes questions about any of the observations or data presented in these charts.

PJM Operating Reserve Costs

PJM Operating Reserve Costs (\$/MWh Load)

- Beginning in December 2008, the daily Balancing Operating Reserves (BOR) rate was replaced with six different BOR rates: RTO BOR for Reliability Rate, RTO BOR for Deviations Rate, East BOR for Reliability Rate, East BOR for Deviations Rate, West BOR for Reliability Rate, West BOR for Deviations Rate.
- Reliability rates are charged to all real-time load and exports, whereas deviation rates, as before, are charged only to real-time deviations. RTO rates are charged to the whole footprint, whereas East and West rate adders are charged based on location.
- The table in the following slide shows average daily balancing operating reserves rates for each month since the implementation of the new regime.

Balancing Operating Reserves

Average Daily Balancing Operating Reserves Rates

| | RTO Balancing OR for Reliability Rate | RTO Balancing OR for Deviations Rate | East Balancing OR for Reliability Rate | East Balancing OR for Deviations Rate | West Balancing OR for Reliability Rate | West Balancing OR for Deviations Rate |

Reliability rates are \$/MWh of Real-Time Load plus Exports. Deviations rates are \$/MWh of Real-Time Deviations.

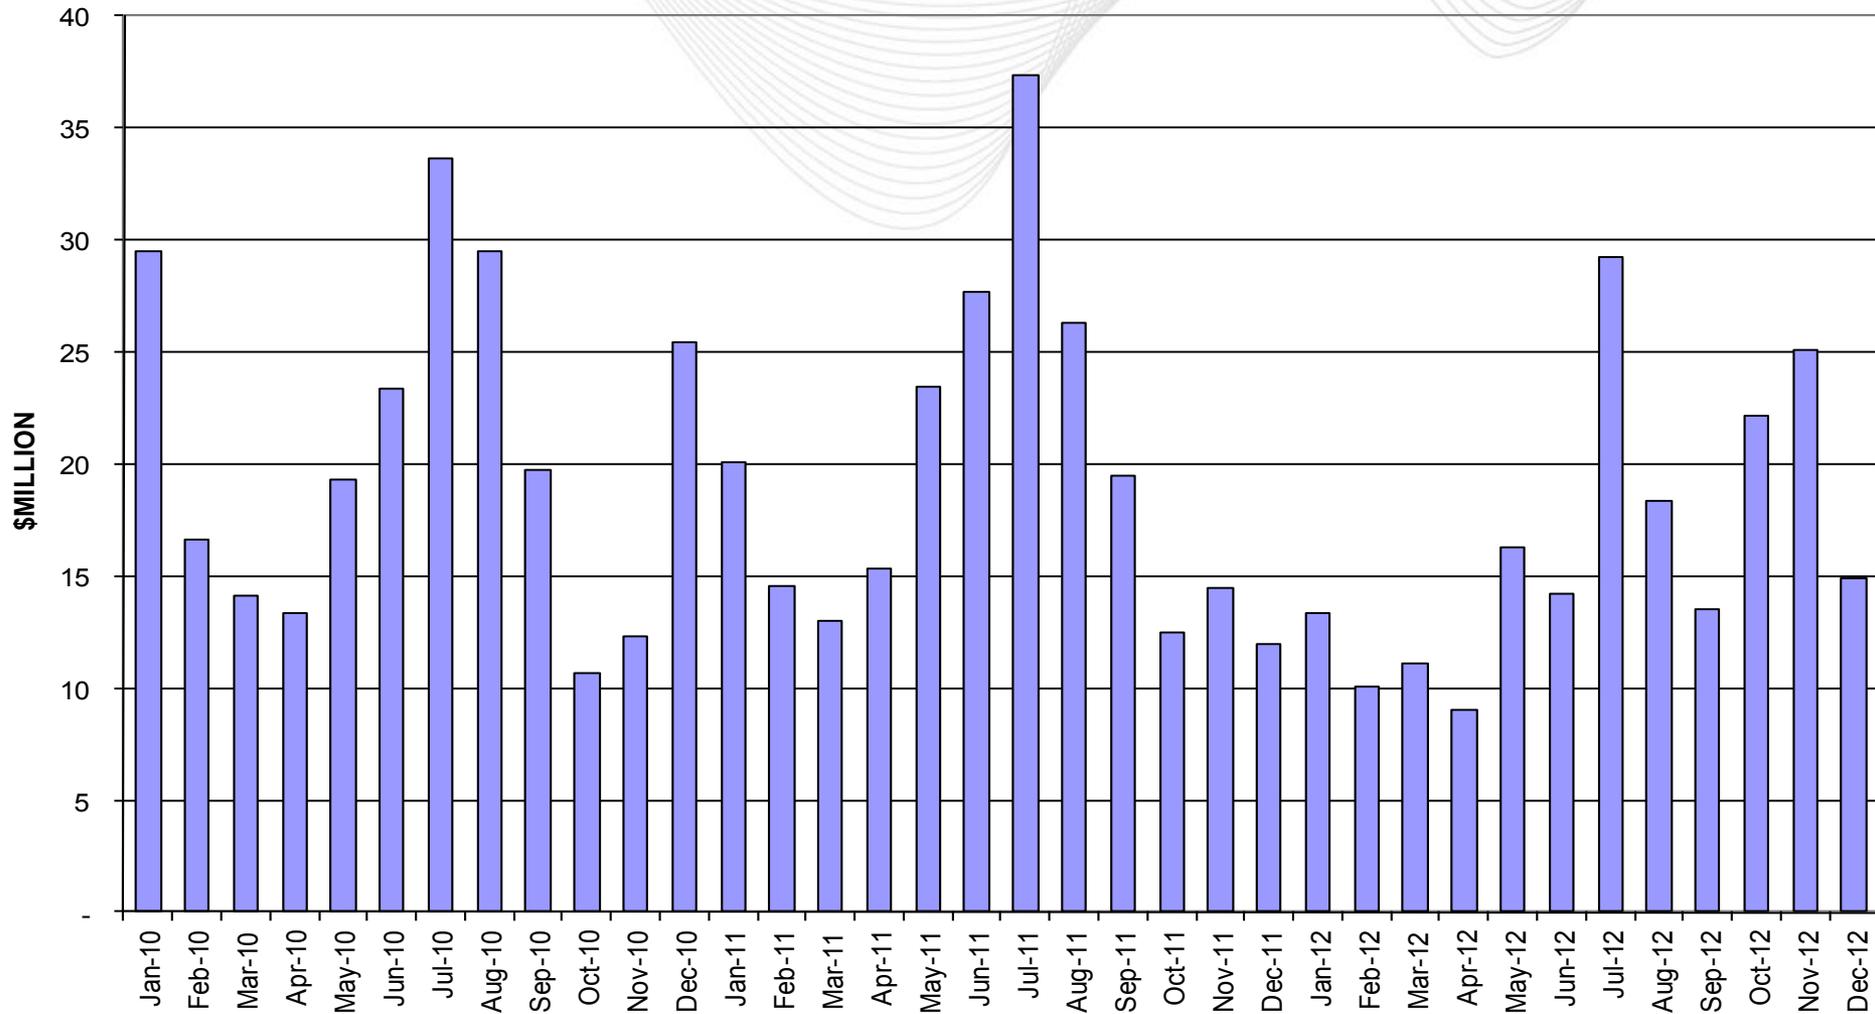

DA OR Charges & East BOR Rates

- In September PJM started committing reliability steam units that run in Real Time for Black Start and Voltage support in the Day Ahead Market in order to reduce the inconsistency between steam units run in Day Ahead opposed to what was actually run in Real Time, thus mitigating high RTO BOR Deviations rates.
- The high level of total DA OR charges in December is in part due to that factor. PJM was also running multiple units in the DA Market as black start units, for APSOUTH interface control, for CLEVELAND interface control, and for SENECA area voltage control.
- During the month of December 2012 PJM had to run additional generation for reliability to support outages in the JC area for repair work due to damage from Hurricane Sandy.
- Additionally, at the end of December 2012 and early January 2013 there was a spike in natural gas prices due to forecasted cold weather over the holidays. This spike impacted the offer prices of the aforementioned units and caused extraordinarily high BOR rates for the East on the days of 12/28-12/31.

PJM Regulation Costs

PJM Regulation Costs

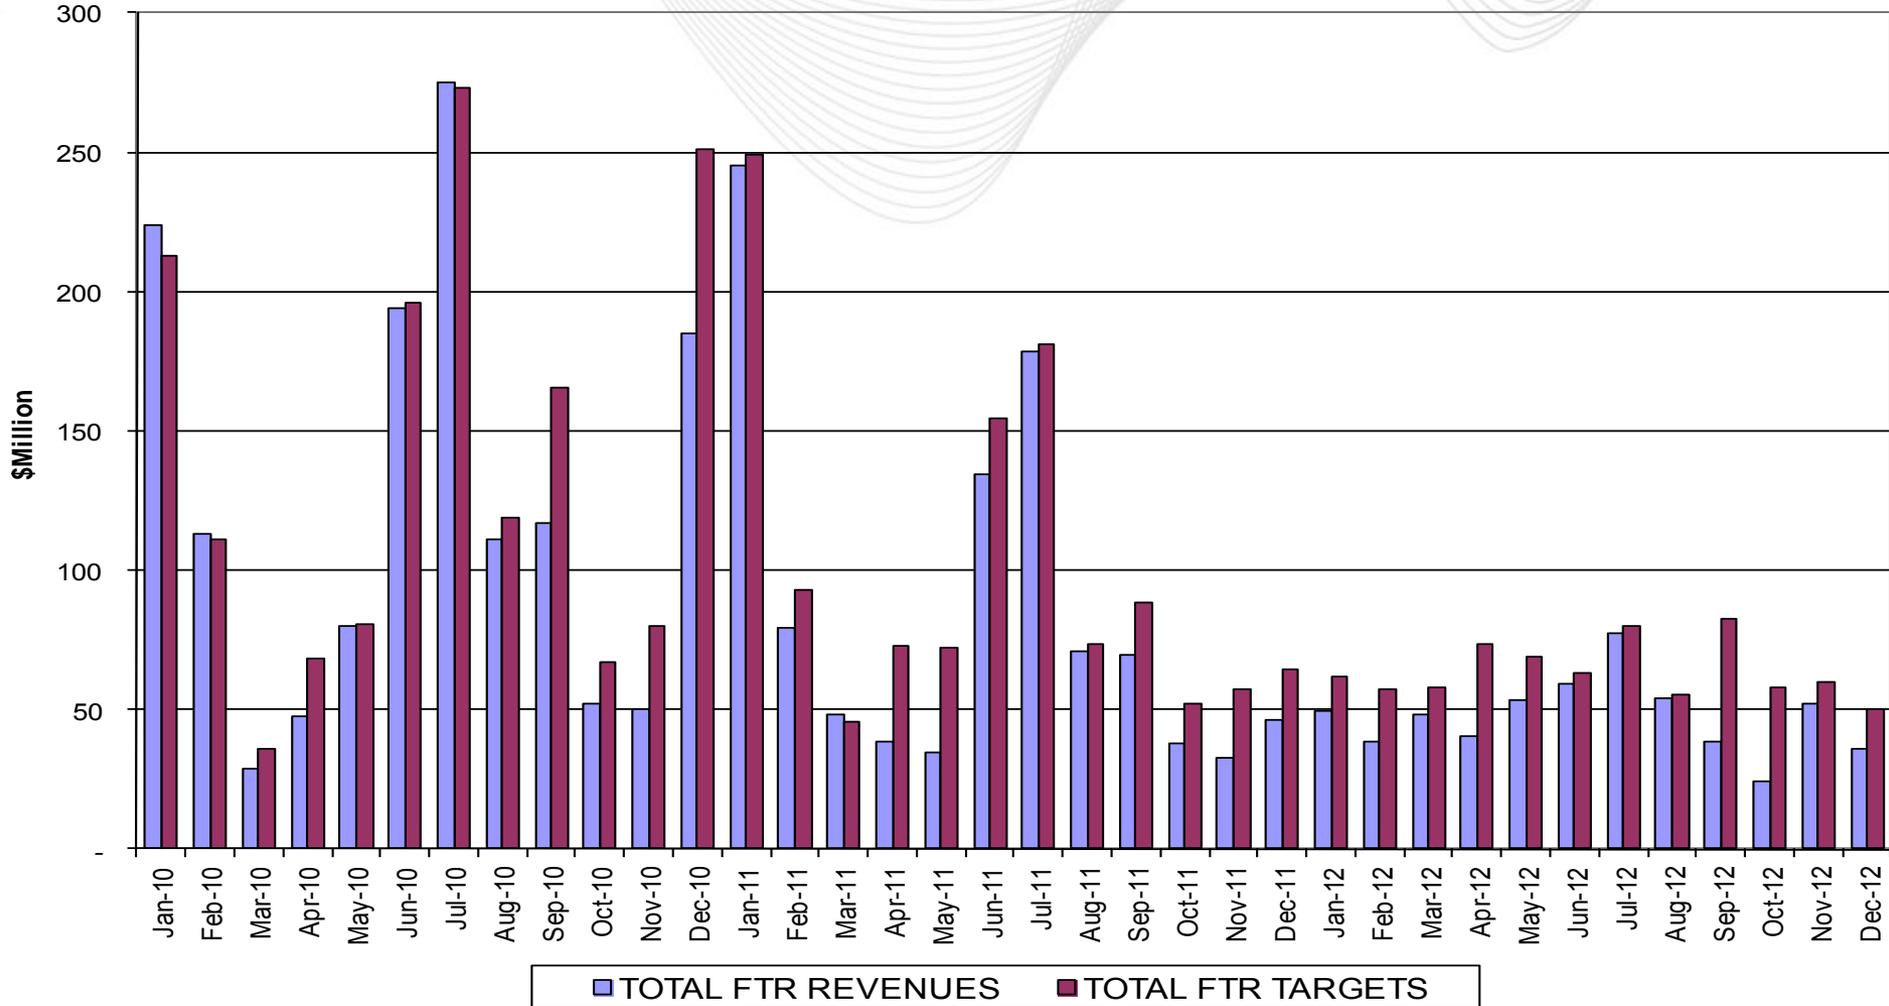

FTR Revenues vs. FTR Target Allocation

FTR TARGET ALLOCATIONS AND TOTAL FTR REVENUES

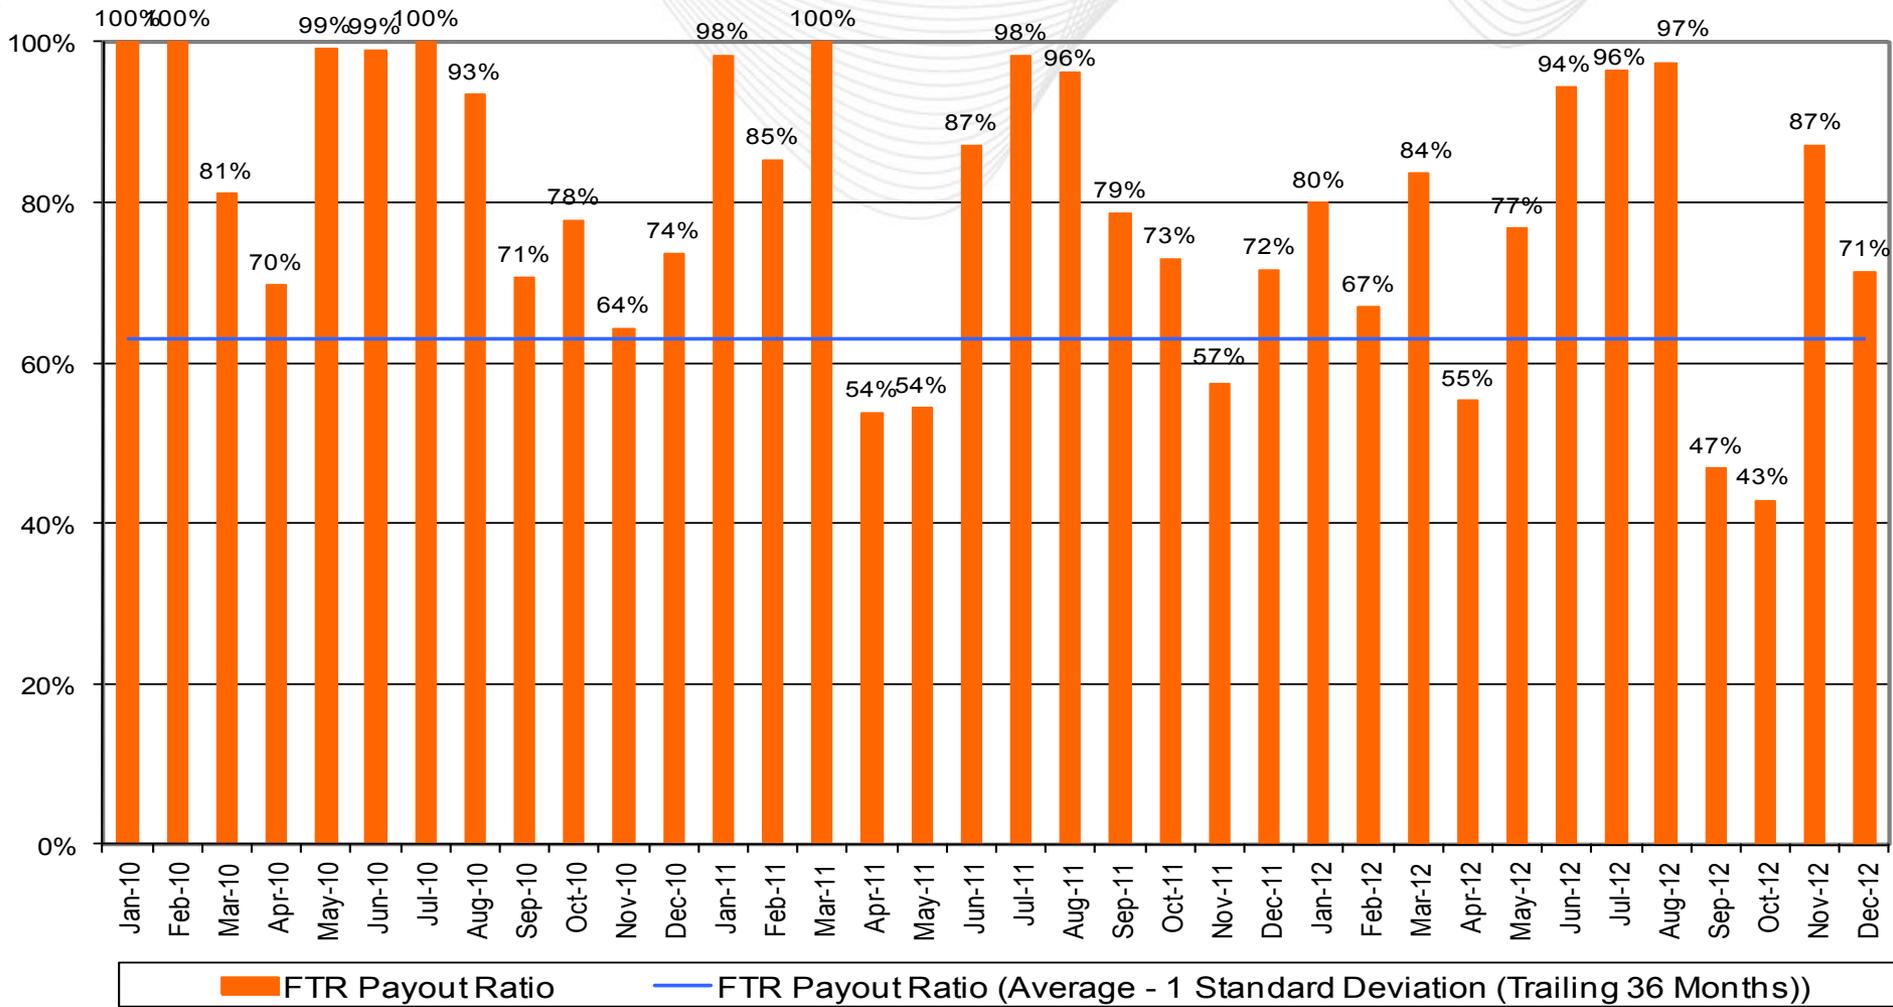

PY 2012-2013 Deficit through December:
\$107 Million

PJM FTR Payout Monthly

PJM FTR Payout Ratio

- FTRs in December 2012 fell \$14.4 million short of their targets, corresponding to a payout ratio of 71.4%. The deficit through the first seven months of the 2012/13 Planning Year (“PY”) stands at \$107 million and the revenue adequacy ratio at 76.1%. Cumulative FTR revenue shortfall for the 2011/12 PY as of the end of December 2011 was \$103 million.
- The transmission elements PJM incurred the largest revenue shortfall in December 2012 are listed below:
 - Leonia 230 KV LEO-NEW (PSEG) \$4.8M
 - Harwood 230 KV HAR_SUS (PPL) \$3.0M
 - Deans 500 KV 500-1 (PSEG) \$2.1M
 - Carl PN 115 KV CAR-ROX (PENELEC) \$2.0M
 - Maywood 230 KV MAY-SAD (PSEG) \$1.6M
 - Bridgewa 230 KV BRI-MID (PSEG) \$1.4M
 - Rising 45 TR1 (MISO FG) \$1.2M
 - Brokaw 345/138 (MISO FG) \$1.2M
 - Deans 500 KV 500-3 (PSEG) \$1.1M

* All values are converted into MWHs by multiplying MWs by event duration.

Price Posting Suspensions and Reruns Percentage of 5-Minute Intervals

***Reruns in October 2012 were higher due to those necessary during the initial implementation of Shortage Pricing.**

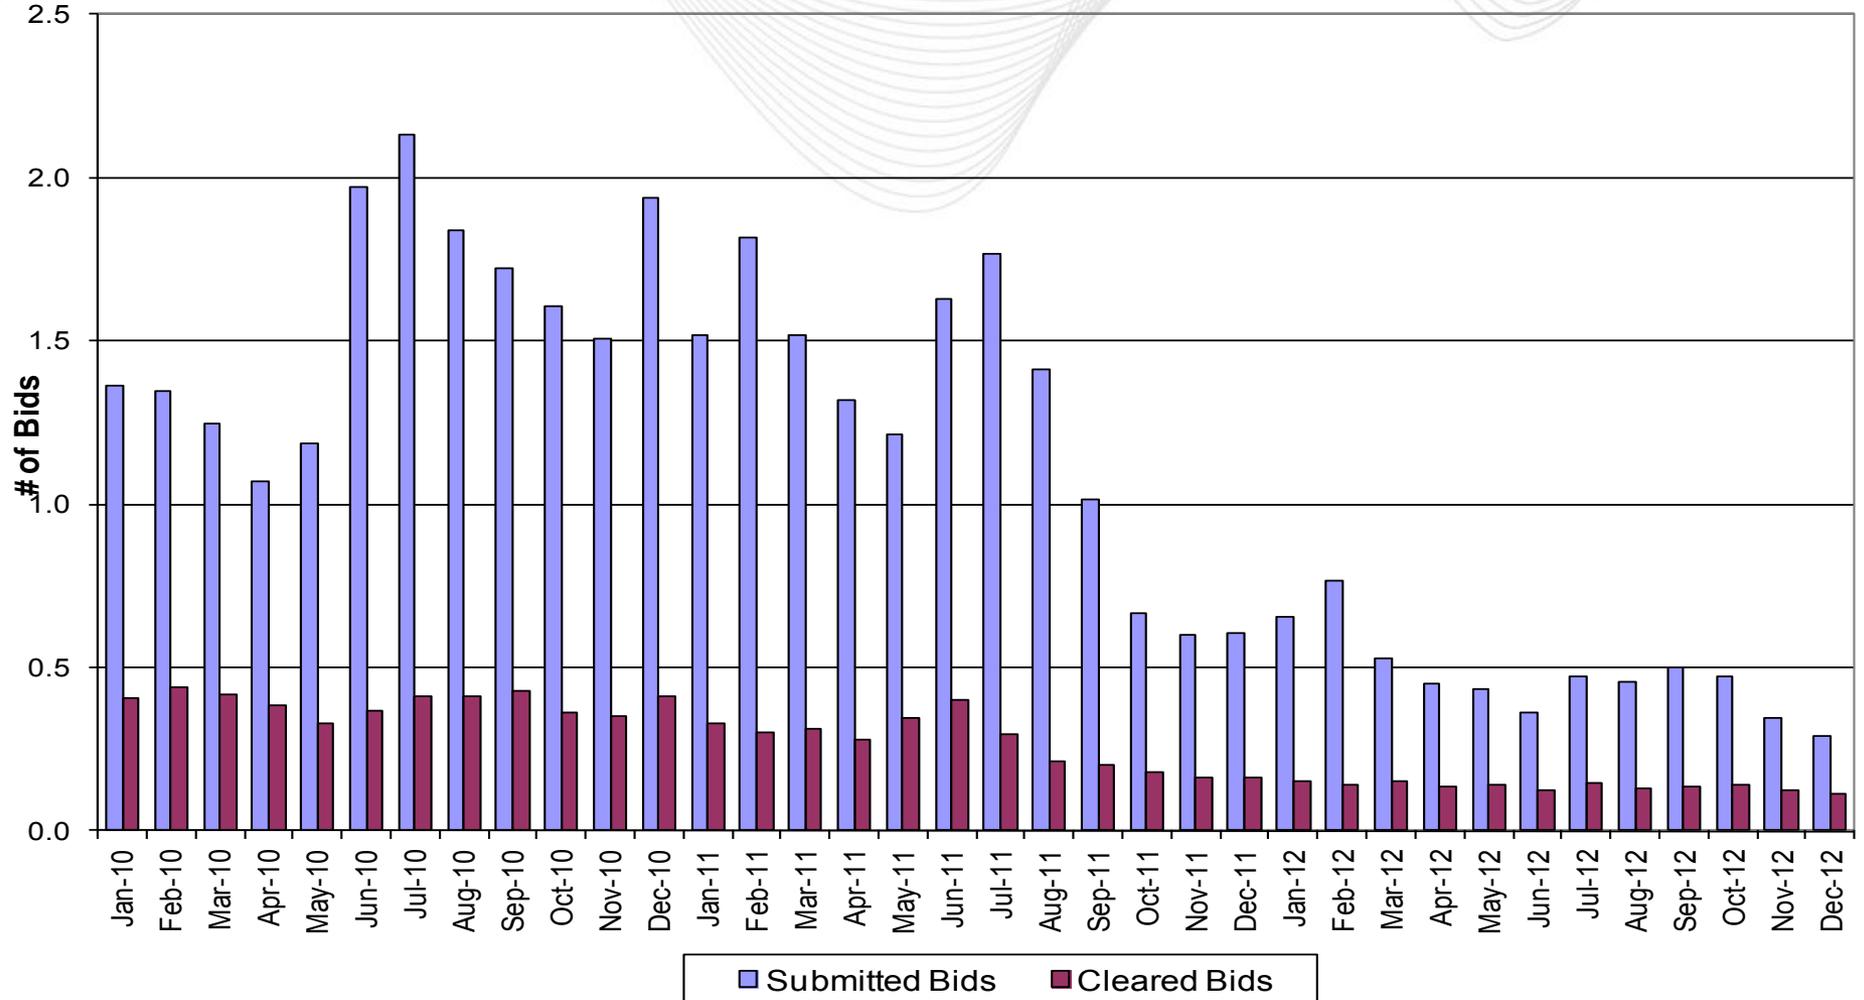

PJM Virtual & Up-To Transactions

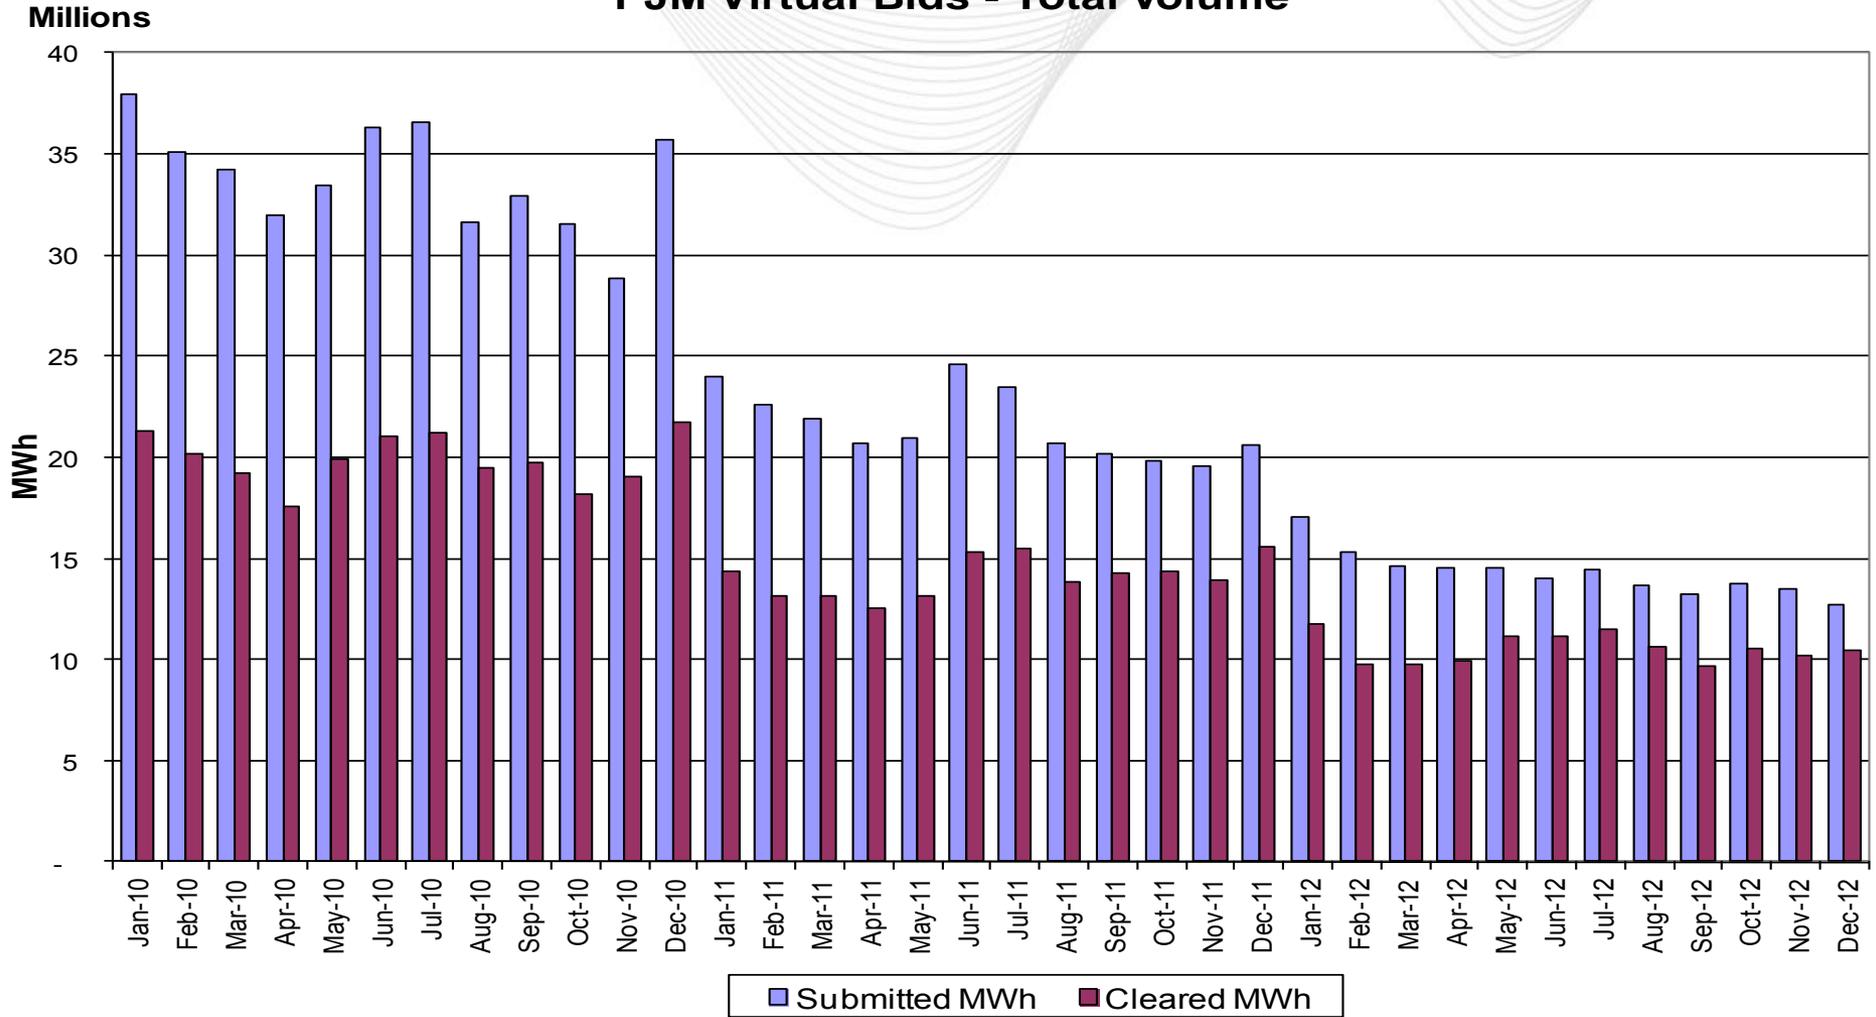

- The following six charts depict trends in submitted and cleared virtual and up-to-congestion transactions, in terms of number and volume, into the PJM Energy Market. The first two of these charts show the submitted and cleared increment and decrement bids (“virtual transactions” or “virtuals”) and they are the same as what was previously being presented in this report. The two charts after them display the trends in submitted and cleared up-to-congestion transactions into the PJM Energy Market. The last two of these six charts combine the virtual and up-to-congestion transactions and show the sum of these two categories.
- To clarify what a “bid” or “transaction” is please consider the following example: An offer (increment, decrement or up-to-congestion) of 10 MWs valid for eight hours for a given day is captured in the charts as eight submitted bids/transactions and 80 submitted MWh. If this offer fully clears for three of the hours it was submitted for, it shows in the charts as three cleared bids/transactions and 30 cleared MWh.
