

Load Reconciliation Problem Statement and Issue Charge

Ray Fernandez
Manager, Market Settlements Development
Market Settlements Subcommittee
October 24, 2019

www.pjm.com PJM©2019

- Review the Consensus Based Issue Resolution Process
- Education on current Load Reconciliation settlements
- Gain consensus to work on the issue
- Develop interests for the issue

- Evaluate the issue based on the approved Problem Statement, Issue Charge and Charter
- Four steps:
 - Problem Investigation
 - Proposal Development
 - Openion Making
 - Reporting to Standing Committees

1

Problem Investigation

Develop a detailed work plan to assist the group in identifying key milestones and deliverables based on the Charter

- Education and joint fact finding:
 - Describe existing operations and procedures
 - Determine whether any information necessary to do the work that is missing
 - Agree on roles, responsibilities, deadlines and goals
 - Explore and consider "best practices"
 - Determine whether outside expertise or assistance may be needed

1

Problem Investigation

Identify interests to ensure all stakeholders have a common understanding of each others' position and/or interest

- Ask participants to communicate the importance of the issue to their organization
- Ask participants to share the most and least important interests in regards to the issue
- Consolidate responses

Problem | Proposal | Development

Propose solutions using a two-step process

- Step 1: Options Matrix
 - Develop options for design components
 - Identify priority level
 - Propose solution options
 - Evaluate and narrow down options ("winnowing")

Problem | Proposal | Development

- Step 2: Solution Matrix
 - Discuss development of packages, encouraging broad stakeholder proposals
 - Use solution option for each package
 - Identify similarities and differences
 - Prioritize, refine and consolidate as best as possible

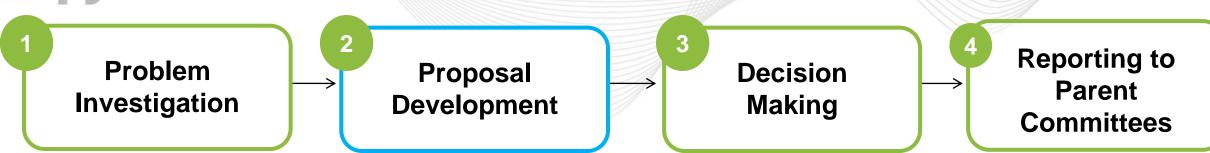

Problem | Proposal | Decision | Making

- Step 3: Decision making
 - Tier 1: Achieve consensus on a single proposal that all parties accept with no objections
 - Tier 2: Provide 2-3 alternatives when consensus is not obtained under the Tier 1 approach

The Task Force or Subcommittee is required to provide *periodic* updates and a *final report* to the Parent Committee

- Updates should include progress on milestones and deliverables
- The final report will detail all the of steps used in the evaluation process including the proposed solutions

Load Reconciliation Education

www.pjm.com PJM©2019

- Load reconciliation data is provided by EDCs no later than two months after the original billing month
- Reconciliation data represents the difference between the initial values submitted into InSchedule and the "actual" usage based on metered data
- Load reconciliation data can be submitted for each applicable InSchedule contract
- Load reconciliation charges and credits are calculated for EDCs and LSEs for past billed months on a 2 or 3 month lag

www.pjm.com 11 PJM©2019

- Majority of load reconciliation billing
 - Hourly kWh value times applicable billing determinant
 - Results are summed to a monthly charge or credit
- Reconciliations appear on the monthly invoice, in most cases as a separate billing line item (BLI)
- Currently there are 19 charge BLIs and 2 credit BLIs

Load Reconciliation Overview

- Changes made in 2015 to include load reconciliation MWs in Emergency Energy, Emergency Demand Response, and Operating Reserves for deviations
- Impact of load reconciliation applied to these charges as adjustments to prior billed months and not with separate BLIs

www.pjm.com 13 PJM©2019

- Technology refresh for internal settlement calculation system
- Opportunity to standardize load reconciliation settlements
- PJM proposes to handle all load reconciliation settlements as adjustments to prior billed months and eliminate the 21 distinct BLIs

- Standardize load reconciliation settlements across all impacted BLIs
- 2. Standardize load reconciliation data on settlement reports
- 3. Reduce the number of BLIs on the monthly bill
- 4. Eliminate confusion between source month and billing month for reruns for load reconciliation data

- Reduce the number BLI transfers that members need to manage
- Improve settlement calculation efficiencies for PJM Settlement staff
- Unify Balancing Operating Reserve deviation and reliability charges under the same settlement method
