

eMKT XML Modification

Some flowgates that are monitored by PJM in the day-ahead market have names that exceed the current XML schema limit of 60 characters. In order to properly return the full BranchName in the Binding Limits query, the eMKT XML Schema has been modified to extend the maxLength of the BranchNameType to 90 characters.

Participants that process the BranchName element in the Binding Limits query should increase the field size to 90 characters. eMKT has been updated in the customer training site at <https://esuitetest.pjm.com>. Participants can test any necessary changes against this system. PJM plans on making this change to the production system on Wednesday, December 8, 2004.
