

PJM Interconnection  
Report to the OC on the June 2010 SIS Meeting  
955 Jefferson Avenue  
Norristown, PA  
July 20, 2010

1. PJM'S NEW EMS (AC<sup>2</sup>) UPDATE

Mr. John Collier provided an update on the AC<sup>2</sup> project, focusing on SOW#3 (EMS).

2. PJM OPERATIONS, EDART AND ESUITE

Mr. Jerry Whooley reviewed the presentation. Preliminary results indicate eDataFeed posts its data before OASIS does just over 50% of the time. An eDART release is scheduled for June 30<sup>th</sup>.

Mr. Ron Graff reviewed the SOS reports. There were no concerns.

3. REMOVAL OF ZONAL LAMBDA

Mr. Jeff Hoffman provided a presentation. The removal of zonal lambda is still planned, and is expected to occur in the fourth quarter of this year. PJM will be conducting a test on July 1<sup>st</sup> to stop UDS for 30 minutes, and will send out an all call to alert companies. Members were asked to monitor economic base points to ensure continued availability during the scheduled stop. A comment was made that some companies calculate their own base point from the UDS lambda.

Mr. Hoffman stated he would verify that this information will still be provided during such an outage.

PJM will take feedback from the test on July 1<sup>st</sup> and will determine if a follow-up test (to be conducted on August 3<sup>rd</sup>) is needed.
