**Subject:** power

Dear all concerned officials of PJN -

I am concerned about the latest proposal that would likely result in coal burning residue into the lower Delaware region. I have been very supportive of the wind power plant plan because I have asthma. I have a retirement home in Delaware and don't want any additional air pollution that would ultimately force me to relocate. Coal is the cheapest form of power but at a price. The National Trust for Historic Preservation criticized the draft rule as potentially devastating to historic sites and natural areas. Expand the plan for wind energy sources to send power west and make Delaware resources pay off for the state rather than make Delaware in so many ways.

Thank you for your consideration.  
Sincerely,  
Brenda Kriegel, Resident of RBYCC
