Transmission Line Outages
Impact of Outages

• Transmission line outages impact both the day ahead and real time markets/prices.
• Changes in transmission line outages after the day ahead market closes can also affect uplift payments.
  • Cancellations
  • Scheduling (additions)
  • Re-scheduling
Proposal

• Twin Cities proposes charging an uplift allocation to transmission line outage deviations for changes made after the DAM closes.

• Transmission lines are physical assets (load, generation), and as such should have a physical deviation uplift allocation.
