| Ike-Egbuonu, Chidiogo | PJM Interconnection, LLC |
| Patterson, Justin | PJM Interconnection, LLC |
| Sujon, Abul | PJM Interconnection, LLC |

eDART Transmission Members Participating via Teleconference & WebeX:

| | |
|-------------------|---|
| Chanoski, Sam | Duquesne Light Company |
| DeLoach, Ron | PJM Interconnection, LLC |
| Harchick, Jason | Public Service Electric and Gas Company |
| Karasiewicz, John | Duquesne Light Company |
| Sebold, Mike | Public Service Electric and Gas Company |

1. Minutes Review

Ron DeLoach reviewed the highlights from the last EDUG-T meeting which was on **December 7th, 2009**. This included enhancements related to Future facilities, ticket notification downloads, date log, PSS functionality, EMS outage lists and the need for a consensus on multiple company ticket IDs.

2. Telemetry Coordination Enhancements

Ron DeLoach discussed the postponed enhancements to the Telemetry Coordination functionality including:

- The change of company interaction in Telemetry's main menu to viewing the "Today's File". This file displays telemetry information for current and new facilities.
- The addition of LOAD and BUSBAR equipment facilities.
- Retention of the morning and evening notification emails that provide new Object IDs.

He also mentioned that the enhancements have been delayed due to further development requirement for interaction with the new AC² EMS. Ron will sent out notification when the release is rescheduled.

3. Transmission Outage Tickets Enhancements

Ron DeLoach discussed changes to Transmission Outage Tickets functionality, including:

- Transmission facility outage notification emails now list the Equipment Start/End Dates instead of only the ticket Start/End Dates.
- In the Current & Future Outages and Historical Outages filters, there is now option for multi-select for the zones within a company. By default all will be selected.
- The moving of the EMS Outages List button to Facilities Outages Reports section of the Transmission Outage Main Menu. This is a correction from the last release so that generation and market users can view the outage list.
- The archiving of old comment versions in a comment log to address the 500-character limit comment issue.

4. TERM Functionality

Ron DeLoach discussed TERM functionality enhancements in the May 5th release:

- A new "Bulk Upload" functionality added to relieve the burdens of Winter/Summer switchover for Ratings Facilities, enabling automatic and multiple ticket creation. This also helps with audit and tracking of submissions. No file can be uploaded if it has warnings or fatal errors. Addition to slide # 18: Columns M-P added for limitations.
- Breaker-Breaker and Internal/External ties are now indicated in the TERM Ticket Revision view.
- "Y" equipment ratings can now be downloaded by companies in addition to their own ratings information.

5. Question and Answer Session

Jason Harchick asked if Ron DeLoach would send the meeting PowerPoint presentation to the meeting attendees. DeLoach informed Harchick that the PowerPoint was readily available at the eDUG site (<http://www.pjm.com/committees-and-groups/user-groups/edart-ug.aspx>).
