

Resource Tracker Ownership Confirmation Requirement

Problem / Opportunity Statement

PJM's Resource Tracker tool provides a single point for unit specific ownership information to be housed and confirmed. Over the last two years, PJM has recognized different enhancements to increase ease of use of the tool and provide more information in this single location. PJM will start a refresh project on Resource Tracker in 2021, which will refresh the user interface to reflect that of the other PJM Tools, add additional fields to provide contacts associated with that unit and enhance access through Account Manager. However, while reviewing preliminary requirements for this refresh project, it was determined that a Generation Owners are not required to confirm this information, only requested. It was also determined that an old term of Market Participant was still being used in Manual 14D, Section 5.3.7 instead of Generation Owner, as used elsewhere in the Manual to properly reflect the proper authority.

As stated in the Operating Agreement, Section 11.3.1(a) Members are responsible for maintaining complete and accurate records. Conducting a required annual confirmation within Resource Tracker is one to way ensure these records remain complete and accurate. Over 95% of units are confirmed today, PJM is looking to codify current practice within Manual 14D, Section 5.3.7. Since the information being collected is associated with each specific unit, the Generation Owner, or a designated agent through a Declaration of Authority, is responsible for ensuring the confirmation is completed annually.
