DR Hub January 2024 Release Changes

- **Changes to Winter Peak Load validation and Summer Only checkbox**
 - “Summer Only” designation on a Load Management registration
 - This means the registration should be linked to a DR resource in Capacity Exchange with a summer only commitment.
 - The registration is required to test if not dispatched during the summer months
 - PJM will still include this registration for Winter dispatch so the registration may respond on a voluntary basis (eligible for energy payment and/or bonus payment under existing rules)
 - WPL is not required on the registration but can be included after a winter event if the resource did respond to dispatch

Additional information on new changes available at the Distributed Resources Subcommittee (DISRS).

DR Hub January 2024 Release Changes

- **Changes to Winter Peak Load validation and Summer Only checkbox – Cont'd**
- DR Hub enhancement to allow annual Load Management registration without WPL information
 - When checking the Completed checkbox, if the Winter Peak Load is blank (null) and Summer Only is not checked, a popup box will appear
 - "The Winter Peak Load does not have a value, therefore the Winter Nominated ICAP is zero for this registration" (Confirm/Cancel buttons)
 - Annual registrations are only required to test if not dispatched
 - Annual Capacity Resources have annual penalties for test shortfall

Additional information on new changes available at the Distributed Resources Subcommittee (DISRS).

DR Hub January 2024 Release Changes

- **Mass Market Enhancements for Residential registrations**
 - Mass Market Enhancements have been postponed due to technical issues that are being investigated.

Additional information on new changes available at the Distributed Resources Subcommittee (DISRS).

Future DR Hub 2024 Releases

- Test/Retest Compliance Record Enhancements (2024).
- Peak Shaving Adjustment (PSA) - new program with registration and compliance (2024)

Additional information on new changes available at the Distributed Resources Subcommittee (DISRS).

Product Details

[DR Hub](#) allows PJM members to administer the registration, notification, meter data and settlement process for Demand Response resources in the PJM markets.

Key Product Features

- User Interface that allows CSP's, EDC's and LSE's to manage tasks, create/ manage locations, registrations and settlements
- Web Services that allows many of the same UI features and includes a polling mechanism for Events

[Power Meter](#) calculates a market participant's actual interchange energy amounts to be used for real-time energy market settlements. Transmission and generation owners submit hourly tie and generator values to be verified and corrected on a next-hour basis.

Key Product Features

- User Interface that allows users to set up meter accounts and manage data submissions and corrections
- Web Services that allows users to upload meter data

[InSchedule](#) is a tool used by power marketers, load serving entities and generation owners in PJM to submit their internal PJM energy schedule data. All PJM internal transactions, including load and generation interchange adjustment modeling and implicit internal Spot Market schedules are handled through InSchedule.

Key Product Features

- Allows participants to submit internal PJM energy schedule data

The [Billing Line Item Transfer](#) tool replaces the current paper process completed with the Declaration of Authority form, allowing users to easily create billing line item transfers online. This tool may be used by PJM participants who want to transfer charges and/or credits to other organizations through their billing. Transfers are created by one party and approved by another party to complete the transfer process.

Key Product Features

- Allows participants to transfer charges and/or credits to other organizations through their billing
