

Fuel Security Phase 2 Terminology

- Problem:
 - Fuel Security: Availability of fuel both on-site and assessed from delivery systems required for a unit to generate consistent with dispatch signals or operating instructions. Includes all resource types.
- Solution:
 - Energy Security: Includes multiple potential solutions and recovery options. Can be a combination of fuel, resource, and system attributes that can be achieved through existing, modified, or new mechanisms. Acceptable risk level to be determined.

Problem: Fuel Security

Pipeline Disruptions
Coal Unavailable
Oil deliveries

Which reduces
generation
diversity to meet
energy needs
