Education Material Related to Transmission Service

Rich Souder, Manager
Dan Coll, Analyst
Transmission Service Department
June 17, 2016

- Firm Transmission service is required to pseudo-tie into PJM
 - Network External Designated (NED) Firm Transmission Service is used to import installed capacity resources into PJM.
 - NED service is studied based on a specific generator
 - Firm Point-to-Point (PTP) Transmission Service can be used to import or export capacity and energy.
 - PTP has a transmission service charge of \$18,888/MW-Year

- PTP and NED requests are processed via the requirements outlined in Parts II and III of the OATT, respectively.
- The long-term firm study process is outlined in Part VI of the OATT with associated analysis outlined in Manual 14A.
- Deliverability results determine whether upgrades are required to grant service request.
- If a generator is no longer a PJM capacity resource the associated NED transmission service is terminated.

NED Definitions

RAA Section 1.33 - 1.49A

- Network External Designated Transmission Service shall mean the quantity of network transmission service confirmed by PJM for use by a market participant to import power and energy from an identified Generation Capacity Resource located outside the PJM Region...

PJM Regional Practices Section 1.5

- Each network transmission use delivering designated resources to serve PJM designated load must be requested on the PJM OASIS by the load serving company or a PJM Customer importing installed capacity resources into the PJM Balancing Authority.
