

## Letters Received as of April 1, 2026 Regarding Proposed Transmission Upgrades

The following emails were submitted to the Secretary of the PJM Members Committee - David Anders - pursuant to the Board Communications process and are being posted pursuant to that process.

Subject: Input on the Planned Addition of More Transmission Lines in Virginia

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I am extremely concerned about this proposal and need the environmental impacts reviewed closely. Please make better choices!

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Mrs. Deborah Foulk Libby

Warrenton, VA 20187-2557

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands. And why is that? Because the Board of Supervisors went overboard on approvals for datacenters. And now who pays the price? The consumers. We have already lost acres upon acres upon acres of woodlands, forests, and habitat that had made Loudoun County and the surrounding areas so special. Now, I drive down Belmont Ridge Road - a once beautiful road as it approaches Rt 7 - and now it is just barren and desolate.

And now with these added powerlines - where will they go? What more natural habitat will be destroyed to make room for them? I am very concerned about them running through neighborhoods which causes numerous issues. Have you ever stood near large powerlines? They are LOUD.

It would be quite ridiculous for PJM to approve additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1).

Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Please do not look at the lines through money eyes. Please consider our land, our habitat, and open spaces that will be lost. And whatever cost needs to occur, be sure these costs are passed on to the multi-billion dollar industries who are building the datacenters. I can't afford the increase - they can.

Sincerely,

Ms Jennifer Gonzalez

Ashburn, VA 20147-7454

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers. I attended a Dominion community Meeting in early October, and I viewed the proposed transmission line expansions proposed in my vicinity. I asked the Dominion engineers if these were needed to meet data center demands, and they said "no". It concerns me that these people could not be honest in their answers. Studies show that energy demands for residential and small businesses have actually decreased. Why do we need expanded transmission lines?

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Ms. Bridget Meagher

Why don't you require the data center operators to locate the data centers near the power plants that serve them - rather than run power to the data centers? Fiber is significantly easier to install than large primary power cabling.

Sincerely,

Mr. Michael Byrnes

Winchester, VA 22603-2456

These projects disrupt the beautiful rural landscape of Fauquier County, where I live. In addition, as a private citizen and small consumer of energy, I should not be responsible for paying a large share of any data center's electrical cost. They should pay their fair share.

Sincerely,

Ms. Rebecca Benoit

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Ms. Victoria Shih

Plano, TX 75025-3743

In closing, we already pay subscription fees for access to data and voice communications, what need we pay increased electric device invoices. Data center operators should pay a million dots month in electricity they are all profitable, let them pay

Sincerely,

Mr. Leonard Brown III

Middleburg, VA 20117-3224

Dear PJM Members Committee Secretary David Anders,

Regarding PJM's planned regional transmission expansion: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy: these additional lines are supposedly needed because data center growth is so rampant.

All of these numerous lines will cross through valuable farmland and impact residential neighborhoods, parks, trails, historic sites, and large areas set aside for preservation.

PJM shouldn't be approving additional transmissions lines before building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing plans for additional lines so far ahead is bound to lead to conflicts.

Sincerely,

Mr. Dan Bieker

North Garden, VA 22959-2039

Dear PJM Members Committee Secretary David Anders,

I support data's centers being required to supply their own energy needs. Some communities and states are requiring this. Let's do it in Virginia!!!no more pollution and higher electric bills!!

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

It is outrageous that all ratepayers are paying for all these huge projects that are specifically being done to support data centers. The data center operators must pay for all of this instead of being subsidized by people who don't benefit from the expense. If anything, the public is being hit twice, once the cost and once by the noise, pollution, traffic, etc.

Please fix this problem or stop approving more of these projects!

Thank you,

Sincerely,

Mr Roderick Walker

Subject: I am against the Planned Addition of More Transmission Lines in Virginia, especially in our rural and farmland areas.

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers. I am OPPOSED to this expansion. Not only will these enlarged transmission centers end up costing ALL of us Dominion Energy customers more in our electric bills, but, these centers will require the use of MASSIVE amounts of water for cooling. Water is already a major concern in our area with recurring droughts and the utility company using valuable drinking water and water needed for farms.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am VERY concerned that all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Subject: Planning More Transmission Lines in Virginia

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my views on PJM's consideration of additional regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

All of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

The current rate of growth of data center capacity is much faster than considered policy or adequate citizen input allows. There is also considerable evidence that demands for new capacity are a bubble, far exceeding what actual demand would be. Building new lines to serve demand that will ultimately not be needed would be a travesty.

Finally, no more lines should be built until Va requires that new infrastructure be paid for by the companies that are creating the demand and pocketing the profit - not by ratepayers. Those that must be built must be placed underground with the cost, again, borne by the developers.

Thank you for your consideration

Sincerely,

Ms. Jessica mathews

Marshall, VA 20115-2743

Dear PJM Members Committee Secretary David Anders,

You jace completely destroyed our lands with these data centers and ugly powerlines everywhere. Millions of animals have been killed and displaced what used to be a beautiful area to raise. A family has turned into an industrial wasteland. Our air quality is going downhill and many people I know are moving away. I really don't know a worst case of greed over our environment. To move forward with this type of technology without sustainable, clean energy is madness. These data centers could've been built, underground or several stories wrapped in solar panels. All of you went ahead and kept building with no regard for the devastation that has ensued.

PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers needs to stop.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Drs James and Liz Lee

It is imperative that the long-term undesirable effects and consequences are seriously considered in making these decisions. Whether or not one wants to publicly acknowledge such, everyone is well aware that our quality of life, truly the most important factor—as opposed to profit and greed—will be negatively impacted. To ignore such factors would be negligent and shameful.

Sincerely,

Mrs. Kathleen Lazar

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals

275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

ms Robin Hoffman RN MA

Charlottesville, VA 22902-5428 [r](mailto:robin.hoffman@pjm.com)

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers. Already power poles are being altered along Rt. 29 in Albemarle County for the possibility that data centers would come here. This is the major entrance corridor into Albemarle and Charlottesville. They are unsightly at the very least, adding to our electric bills, and most of all, the data centers are not wanted here by the citizenry. I know this is not part of your plans at the moment, but the real truth is they are definitely anticipated by the BOS all over Virginia. These lines destroy bucolic lands, interrupt the peace in

neighborhoods and seemingly we have no input that is ever heard. Please hear me and stop these ruinous plans.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Ms. Jenny Jeffress

Barboursville, VA 22923-1626

Dear PJM Members Committee Secretary David Anders,

I live in Manakin-Sabot and we residents are currently fighting a TOD. I am opposed to PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers. We should not allow data centers without independent impact analyses and ordinary customers should not be paying for the hardware and energy of alphabet companies!

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands. The Virginia United Methodist Bishop has called this growth unsustainable.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Mrs. Lisa Sykes

Dear PJM Members Committee Secretary David Anders,

We're losing beautiful parts of Virginia tearing down trees and criss crossing these massive towers across the land! Our leaders need to wake up and stop this nonsense! Bury your ugly lines if you have to have them and don't make residential customers pay for it! Do the right thing for our ecosystem and for the people who live in the states affected by these transmission lines!

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

Dear PJM Members Committee Secretary David Anders,

Regarding ongoing plans and proposals for the expansion of transmission lines in Virginia to serve the out of control data center expansion, please be advised that our family of four is strongly against additional data center construction and strongly against the expansion of transmission lines. Your out of control expansion reflects a serious lack of vision as well as consideration for local communities. We don't want more data centers, we don't want to pay for data center energy consumption and we certainly don't want massive transmission lines constructed. Stop the nonsense!

Sincerely,

Mrs. Joan Konz

I am concerned that a large majority of these lines will cross Fauquier County yet almost none of the demand resides in the county. Why should Fauquier lose valuable greenfields and accept significant impact on residential neighborhoods to enable growth in other locations. Please change your process of evaluating powerline routes to maximize paths in locations that use the power even if it is more expansive.

Sincerely,

Mr. Fred Smith

Broad Run, VA 20137-1931

Dear PJM Members Committee Secretary David Anders,

NO COST TO RATE PAYERS FOR DATA CENTERS! It's like writing a check to Amazon and all the big AI companies. They should pay for the infrastructure at the same percentage and rate per wattage (or more) as the general public or private business. And, DON'T put ANY large power lines through Rappahannock County where power lines will destroy the uniquely beautiful landscapes.

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Ms Theresa Kilby

Reva, VA 22735-1846

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

I am deeply concerned about urgent push to add data centers to our state. They create vast amounts of noise and air pollution, and require large quantities of drinking water to run. This is moving in the wrong direction for our energy future.

As a consumer I'm also extremely upset that my family and others are footing the bill for billionaire corporations to earn even more money all while increasing environmental damage during a climate emergency.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Ms. Johannah Willsey

Columbia, VA 23038-2632

Subject: Input on the Planned Addition of More Transmission Lines in Virginia

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

Proposal 331 is directly through my local community, and will ruin its rural nature.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands. Data center development is happening too fast and without enough knowledge, and we need to get ahead of this issue.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands. Proposal 331 runs directly through mostly rural areas. People won't want to move to the country anymore (and will likely move away (and therefore hurt the local economy) if these transmission lines are built.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems. We need to figure out the energy needs before putting in more transmission lines, because we're going to end up with a problem that can never be undone.

Please, don't give in to the current popularity of AI and the need for data centers without first looking far into the future and what we want that to look like, and what we (and our children) will have to contend with.

Sincerely,

Miss Shelly Evans

Concord, VA 24538-2024

Dear PJM Members Committee Secretary David Anders,

Science is clear. The planet is warming, atmospheric CO2 is rising, the consequences are enormous, and we have the technology to do something about it. Increasing the use of

solar and wind energy is a very important way of reducing fossil fuel burning and increasing CO2. Ways the CJM system m can contribute include:

- 1) Giving priority to and expediting the transmission systems for wind and solar farms.
- 2) Making it easier for future solar and wind projects to connect and shortening the time required to do so.
- 3) Making better use of right-of-way by encouraging the installation of solar panels in the open space.

Please read this short article to get the latest on the world we are leaving for our children and grandchildren:

Just published in Academic Rigor, journalistic flair The world lost the climate gamble. Now, it faces a dangerous new reality

<https://www.msn.com/en-us/weather/topstories/the-world-lost-the-climate-gamble-now-it-faces-a-dangerous-new-reality/ar-AA1R3JVJ?ei=5>

I hope that you will be able to expedite the use of solar and wind and encourage legislature to support CJM in doing so.

Thank you for considering this.

Sincerely,

Mr. Douglas Mitten

Haymarket, VA 20169-6130

Subject: Input on the Planned Addition of More Transmission Lines in Virginia

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

The more I learn about data centers, the more concerned I am that 1) generative AI will be more harmful to society than helpful 2) the resource demands of data centers (water, energy) are wholly unsustainable 3) the energy required by data centers is extending and expanding the use of fossil fuels 4) data centers are keeping America from reducing emissions in line with the Paris climate agreement, which is both a necessary and responsible goal, if we care at all about the habitability of Earth and the quality of life for future generations.

I'm writing to share my input regarding PJM's regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional proposed lines are needed because data center growth in Virginia is out of control. Why is PJM acceding to these seemingly unending resource demands instead of pursuing a more measured, responsible and sustainable path of data center power provision?

As proposed, the numerous transmission lines will cross through valuable greenfields and will have a significant negative impact on residential neighborhoods and community resources like parks, trails and scenic and historic sites, as well as large areas of conserved lands, which should be left undisturbed.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for

additional lines so far ahead is bound to lead to unforeseen conflicts and problems. People like me are increasingly disturbed about data centers and their attendant resource and infrastructure needs, such as these multiple new transmission lines. I question the expense, use of resources, disruption and harms they bring, and I look to PJM to rein in hasty transmission line sprawl.

Sincerely,

Ms. Margaret Gilges

Charlottesville, VA 22901-7807

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, especially Proposal 331, from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

I am also concerned that the cost of all the newly proposed lines will be imposed on all ratepayers, who are already burdened with the costs of data center needs despite not wanting any more data centers in Virginia. If you will not demand that Virginia law be changed to impose ALL data center costs directly onto the data center builders/owners/users, no additional costs should be incurred at all.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems. We individual ratepayers **MUST NOT BE FURTHER BURDENED WITH THESE UNNECESSARY COSTS.**

Sincerely,

Ms. Linda Chase

Crozet, VA 22932-3187

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers. I live in Southern Albemarle County near where a line is being proposed. I see that Proposal 331 will go across greenfields (forests and agricultural land). I own property that has a Dominion ROW for a larger power transmission line. I have to listen to the crackle of electricity through the lines 24/7 and am subjected to the noise of chainsaws and the use of herbicides to manage the vegetation.

This is especially upsetting in light of the fact that it is being caused by data centers and that ratepayers will be footing the bill.

Please slow down on these overly aggressive plans. We should be working to conserve energy rather than making it easier to produce and use more!

Sincerely,

Mrs. Christine Putnam

Scottsville, VA 24590-3102

We need to be considering our children's future and see that data centers and AI are a massive step back in preserving the ecosystem and preventing climate change. There have already been NUMEROUS deaths due to AI psychosis. AI is dangerous. Its ability to generate images makes it immensely easy for criminals and predators to generate child pornography. There is a woman that went public stating that she was shown child pornography of herself that was generated by AI utilizing old photos of her from childhood. Criminals are utilizing these tools to victimize and abuse grown adults. Each AI generation uses a significant amount of water and produces carbon waste. AI is also often regularly incorrect and misleading, and multiple studies have been released showing that reliance on AI results in declining intelligence and lessened reasoning ability. Please for the sake of our futures and all things sane, do not allow this AI nonsense to receive yet another pass and go ahead to spread nonsense destroying the environment and peoples brains and lives.

Thank you.

Sincerely,

Mr. Oliver Kennedy

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

And in no way does it make sense for our current and future environmental needs to burn MORE GAS and DIESEL fuel and pollute our air. We MUST use clean energy solutions, and require data centers to pay for the increased infrastructure needs AND have a net-neutral carbon footprint!

Don't take our tax money and enable them to pollute our air and water.

Sincerely,

Mr. Charles Macri

Norfolk, VA 23505-4349

Subject: Input on the Planned Addition of More Transmission Lines in Virginia

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

Data centers have a significant environmental impact, there are local quality of life concerns, and they increase the strain on local infrastructure and utilities. They consume massive amounts of energy, often from fossil fuels, and large volumes of water for cooling, while also generating noise, which can lower property values and affect resident well-being. They can also lead to higher electricity rates for all consumers due to increased demand and the cost of necessary grid upgrades.

Please protect the land and environment.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Mrs. Beth Jones

Midlothian, VA 23113-2230

Dear PJM Members Committee Secretary David Anders,

It is time to pause building infrastructure to support data centers. The cost to Virginia ratepayers and burden on water resources has gotten out of hand.

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

Dear PJM Members Committee Secretary David Anders,

I'm so upset as a lifelong resident of Virginia to see the explosion of huge, polluting data centers in the state, including being located right next to neighborhoods. This has got to stop!

PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers has to be halted in its tracks.

I am concerned these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM absolutely should NOT be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). The impact on our natural spaces, air and water as well as communities is unacceptable.

Sincerely,

Mrs. Kathleen Biesecker

Purcellville, VA 20132-4373

It is in my humble opinion the demands of data center should not necessitate this much demand on our currently strained electric grid. Virginia a deserve a focus on lowering energy costs and these projects jeopardize the possibility of lowering prices.

It is also ecologically unsound. I implore you to focus not on data centers, but on a tually Virginians and their needs.

Sincerely,

Miss Sarah Breeden

Henrico, VA 23229-3811

I am upset that these things are pushed through on promises and no real effort to enforce said promises once these data centers are approved. I am concerned that the massive water and energy needed for these data centers will hurt the average citizen by raising electric bills and causing blackouts. I fear it will also lead to water restrictions for consumers while the data centers continue to operate unabated.

Sincerely,

Ms Tina Jones

Dear PJM Members Committee Secretary David Anders,

Stop ruining Virginia!

Virginia used to be known for history, beauty and education...now it's known as the data center capital of the world. We're becoming a state that would sell out the environment and the health of residents for greed.

I'm referring to PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands. I am concerned about the health issues this could cause.

And, another thing...when we buy a new home and the electric bill comes in, we don't give it to the HOA to pay, we don't give it to our neighbors to pay...WE PAY IT OURSELVES! Businesses should do the same.

Sincerely,

Mrs. Maureen Stoetzel

Charlottesville, VA 22903-8800

Subject: Let's make a grid for the people, not just the data centers

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my concerns about PJM's planned regional transmission expansion across Virginia—specifically RTEP 2025 Window 1 and the selected Proposals 275 and 331 from Dominion Energy. As I understand it, these new lines are being proposed largely to feed yet another wave of data-center growth.

That's exactly what worries me. We're adding transmission lines at a pace that seems driven not by what our communities need, but by what data centers demand. If two previous regional expansion plans (2022 Window 3 and 2024 Window 1) weren't enough to satisfy that load, it feels like a sign that the growth model itself is out of balance—not a reason to keep stacking more lines on top of it.

I'm deeply concerned about the cumulative impact: these lines cut through greenfields and conserved lands, they border residential neighborhoods, and they place long-term burdens on parks, trails, and historic sites that people rely on for quality of life, not just convenience. These are places that make communities livable and connected—unlike a server farm, they can't simply be “relocated” when plans change.

Before approving new lines, we should at least build—and learn from—the ones already in progress. Pushing ahead with future planning before earlier projects even break ground is almost guaranteed to create conflicts, inefficiencies, and unintended consequences.

Most of all, I hope PJM will consider a different lens: a grid designed around humans, not data centers. A grid that strengthens resilience, protects the places we value, and grows at

a pace communities can meaningfully participate in. Right now, the process feels inverted—community impact is the afterthought instead of the starting point.

I'm asking PJM to slow down, reassess, and make sure our energy planning reflects the needs, health, and long-term wellbeing of the people who live here.

Sincerely,

Mr John Rabasa

Charlottesville, VA 22901-7807

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands. I read more every day about how VA can't even import enough power to supply all the data centers that are planned and how data centers will rapidly become obsolete as technologies improve. Let's stop the insanity and plan for reasonable growth and end trying to build out in advance of all these data center projects that may not even happen or might require less power in 10 more years.

These lines have a major impact on greenfields, residential neighborhoods and community resources like parks, trails and historic sites as well as large areas of conserved land and the wildlife therein.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). We don't have an obligation to supply power to these big tech businesses at the expense of our land, our citizens and our electric bills. Slow this down and force the industry to develop less power and water intensive solutions.

Sincerely,

Ms. Colleen Bohlman

Glen Allen, VA 23059-5467

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I hope there is still time to consider input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

I am appalled at the rapid plans for expansion. My understanding is that these additional lines are only needed because data center growth is so rampant that the first two regional transmission expansion plans won't be enough to meet their massive energy demands. The General Assembly is currently working on proposals to better regulate energy use and development of data centers in Virginia, so planning additional lines at this time is premature.

In much of central and western Virginia, our natural resources are the most important determinants of our quality of life as well as our economy. Agriculture and forestry production is still the largest industry in Virginia. In addition outdoor recreation opportunities are very important. Such large powerlines will impact viewsheds, provide corridors for invasive species, and may disturb fragile habitats. I am concerned that many of these lines will cross through valuable natural areas and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Thank you for your attention.

Sincerely,

Ms. Carola Haas

Subject: Input on the Planned Addition of More Transmission Lines in Virginia

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

I have multiple concerns about these lines, including their impacts on communities, the environment, health, sustainability, and cost. Virginia has experienced explosive growth in terms of data center construction and energy needs with 17% growth in data-fueled energy demand since 2024.

This is also the serious ethical issue. This growth comes at an enormous cost for citizens because companies get away with passing the increased rates onto the public without paying taxes. It's estimated that Virginia household will be paying more than \$2,600 per year to subsidize the data center industry and the richest corporations in the world.

These additional lines are an extension of the issue. This is a clear example of rampant unfettered growth, as the first two regional transmission expansion plans aren't enough to meet their massive energy demands. Where does this lead? How can we plan better?

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

Virginia deserves more than to be sold out to these tech companies.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

I'm insisting on a responsible plan for growth that takes the public impact into account. Without it, the future of our state is seriously in peril.

Sincerely,

Mrs Ellie Myers

Charlottesville, VA 22911-8647

Subject: Input on the Planned Addition of More Transmission Lines in Virginia

⚠ External Email! Think before clicking links or attachments. Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

I value good air quality, and am concerned that continued data center growth is impacting our air quality (through the use of fossil fuels rather than renewable energy to power the centers), and also impacting our ground water availability. With climate change, we will continue to see droughts that impact water levels in the Potomac river. We need to conserve our groundwater resources.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Thank you for your consideration of air quality and water conservation. Please do not approve the addition transmission lines.

Sincerely,

Ms. Kristen Patterson

S Arlington, VA 22204-3312

Dear PJM Members Committee Secretary David Anders,

I absolutely OPPOSE PJM's planned regional transmission expansion plans throughout Virginia, specifically: RTEP 2025 Window 1, and the selected Proposals 275 and 331, both from Dominion Energy, in order to provide yet more power to serve data centers.

Has there been any EXTENSIVE due diligence and environmental studies to understand the effects on both residents and land/water alike?

I am concerned all of these numerous lines will cross through valuable greenfields and will have a significant impact on residential neighborhoods and community resources like parks, trails and historic sites, as well as large areas of conserved lands.

PJM should not be approving additional transmissions lines before we've even begun building on the previous plans (2022 Window 3 and 2024 Window 1). Continuing to plan for additional lines so far ahead is bound to lead to unforeseen conflicts and problems.

Sincerely,

Ms. Bonnie Lehem

Subject: NextEra request for increased project funding for MARL

⚠ External Email! Think before clicking links or attachments.

Contact the Support Center immediately if you click on a link or open an attachment that appears malicious.

Dear Board of Managers,

I am writing on behalf of the many West Virginia residents who are opposed to the MARL project because of the increased cost we will see in our electric bills. We are not in favor of paying for infrastructure that will not serve our people or our businesses. The original projected cost of this transmission line was bad enough at \$440 million, but now an anticipated doubling of the cost to almost \$1 billion is absolutely staggering for a state that has an almost 17% poverty rate and already very high electric rates. And we are an exporting energy state which makes those high rates even more unbelievable.

It seems to me that NextEra energy should have conducted more thorough research into the actual costs this project would incur. A legally binding contract was signed and NextEra made certain commitments and concessions for which they should be held accountable. We the ratepayers should not bear the burden of their malfeasance.

Folks here are tired of NextEra's land agents trespassing on their property, aggressively trying to obtain signatures on survey contracts and right-of-way access, threatening eminent domain, not leaving contracts for people to review with their lawyers, not being truthful with respect to what folks are signing, and badgering our seniors who are unable to even research what is going on because they have no internet access in rural areas. This is despicable behavior when there is clearly a code of conduct for land agents.

On behalf of many West Virginians and myself, I am respectfully requesting the PJM Board of Managers DENY NextEra Energy's request for increased funding for MARL and instead re-bid the whole project.

Thank you for allowing us to voice our opinion on this very important issue.

Sincerely,

Judith A. Delagarza

# Braemar

To Whom it May concern:

On behalf of the Braemar Community Association, representing more than 5,000 residents in Bristow, we are respectfully requesting the following:

**1. A Unified Mandate for Modern Infrastructure** We, the undersigned community leaders and residents, represent a unified force of property owners who are no longer willing to accept fragmented, overhead transmission expansions that undermine community harmony. We stand in full support of the Prince William BOCS resolution (December 2025) demanding that all new high-voltage transmission lines in the Bristow/Nokesville area be placed underground.

**2. The LS Power Precedent and the "Competitive standard"** We are closely monitoring the proposals within PJM 2025 RTEP Window 1, specifically the competitive bids submitted by LS Power and other developers. These proposals, which prioritize undergrounding along existing transportation rights-of-way like Route 28, can set a new standard for technical and social feasibility in Northern Virginia.

If PJM is evaluating a competitive underground solution along Route 28, it confirms what our community has long asserted: **Undergrounding is the only sensible path forward.**

**3. Demand for Colocation and a "Dig Once" Policy** The pending Nokesville–Bristow (N-B) project and the broader regional expansion must not be treated as separate, competing disruptions. We formally request that:

- **Colocation:** PJM and the BOCS mandate that any approved route along Route 28 serve as a shared utility corridor. If LS Power or another entity is awarded a route, Dominion Energy must be required to co-locate its N-B transmission lines within the same underground trench.
- **Coordination:** Infrastructure construction must align with the county's existing transportation plans for Route 28 to minimize costs and community impact.

**4. Notice of Intent to Intervene** Our communities will not support any proposal, whether from the incumbent utility or a competitive developer, that resorts to overhead structures in residential areas. We are prepared to act as a unified "party of record" to oppose any such filing at the State Corporation Commission (SCC) in Q2 2026.

We urge the PJM Board to approve only those projects that respect local land-use plans and utilize the proven feasibility of undergrounding along established transportation corridors.

On behalf of the Braemar HOA and Joined Community Partners.

Subject: Input on the Planned Addition of More Transmission Lines in Virginia

Dear PJM Members Committee Secretary David Anders,

I'm writing to share my input regarding PJM's planned regional transmission expansion plans throughout Virginia, specifically: Joshua Falls to Yeat , in order to provide yet more power to serve data centers.

These additional lines are needed because data center growth is so rampant that the first two regional transmission expansion plans aren't enough to meet their massive energy demands.

I am extremely concerned as three of the planned routes for the 765KV Joshua Falls to Yeat cross my pristine, rural 350 acres in Orange County. I can assure that that I will fight this tooth and nail. There will be no quarter given whatsoever and in fact I am currently seeking legal counsel.

Sincerely,

Mr Paul McDonald

Locust Grove, VA
