

Markets Report

MC Webinar
June 24, 2026

- PJM Wholesale Cost is now being calculated exclusively by Monitoring Analytics. ([Slide 4](#))
- Slides pertaining to weather conditions, in addition to slides showing average fuel prices, generation on-line fuel mixes, and System Marginal Prices have been combined into a **Market Conditions** section. ([Slides 6-19](#))
- In May, temperatures overall were in line with a typical level. The sum of Heating and Cooling Degree Days was at the historic average. ([Slides 7-8](#))
- Energy use was slightly above the historic average for May. ([Slides 7-8](#))
- In May, uplift exceeded \$2.25M on 8 days. ([Slide 24](#))

- Load-weighted average LMP for 2025 is \$75/MWh: ([Slides 32-33](#))
 - May 2025 was \$56/MWh, which is higher than May 2024 (\$36/MWh) and May 2023 (\$36/MWh).
- There were four 5-minute intervals that experienced shortage pricing in May. ([Slide 31](#), Report Appendix)
- FTR revenue adequacy for the month of May is 100% and the 2025-2026 Planning Year is funded at 100%. ([Slides 49-52](#))
- Congestion values in 2026 are higher than those seen in 2025. ([Slide 50](#))
- Regulation and Synchronized Reserve market costs have generally tracked with energy prices over time, however, Regulation costs have seen increases since the implementation of Regulation Redesign – Phase 1. ([Slides 66-68](#))

- PJM Wholesale Cost is now being calculated and published exclusively by Monitoring Analytics (IMM).
- Annual and quarterly updates can be found in the IMM's State of the Market Reports:
 - https://www.monitoringanalytics.com/reports/PJM_State_of_the_Market/2024.shtml
- Monthly updates can be found in Excel format on the IMM's website:
 - https://www.monitoringanalytics.com/data/pjm_price.shtml
- Year-to-Date updates will be presented by the IMM at the monthly MC Webinar.
- PJM will continue to monitor the IMM's Wholesale Cost calculation.

Market Conditions

- The weather parameter shown in the following slide is a monthly sum of daily Heating Degree Days (HDD) and Cooling Degree Days (CDD).
- Degree days represent a deviation from a baseline temperature, in this case 60 degrees for HDD and 65 degrees for CDD. As temperatures get more extreme, colder or hotter, either HDDs or CDDs, respectively, will increase.
- Typically, winter months will only record HDDs, while summer months will only record CDDs. Shoulder months may have both HDDs and CDDs.
- Degree Days are calculated using a daily load weighting that weights values from stations in each TO zone according to the zonal contribution to the RTO peak on that day.
- Average values use data from 1998 to the most recent complete year, in this case, 2024. Averages include load data for all of TO zones in the current RTO footprint.

Historic Average Weather and Energy versus Current Month

Historic Average Weather and Energy versus Current Month - Daily

Fuel Price Source: S&P Global Platts

Fuel Price Source: S&P Global Platts

Daily Difference Between Day-Ahead and Real-Time System Marginal Prices

Positive values represent days when the DA daily average price was higher than RT. Negative values represent days when the DA price was lower.

Load Forecast Error - Monthly Absolute Error, 10:00 Forecast

Load Forecast Error - May Daily Peaks, 10:00 Forecast

- PJM prepares a day-ahead load forecast at 10:00 am for use by our members.
- This forecast is not used to clear the day-ahead market and is not utilized for the reliability tools that run subsequent to the day-ahead market.

Missed day:	Reason
5/17/2026	Rapid temperature increase and weather forecast error led to high load and underforecasting
5/24/2026	Temperatures came in much cooler across the RTO, leading to low load and overforecasting
5/29/2026	Temperatures came in warmer in several zones, leading to high load and underforecasting
5/31/2026	Temperatures came in warmer in the East, leading to high load and underforecasting

*Other includes Hydro, Oil, Solar, Wind, and Other

'Other' includes Flywheels, Multiple Fuels, Storage, and Other Renewables

*Other includes Hydro, Oil, Solar, Wind, and Other

Daily Generation by Fuel, Other - May

'Other' includes Flywheels, Multiple Fuels, Storage, and Other Renewables

Percent of Renewable and Clean Generation

'Renewable' includes Wind, Solar, Hydro, and Other Renewables. 'Clean' includes Renewable and Nuclear.

Operating Reserve (Uplift)

*Uplift for January 2025 totaled nearly \$400M. Please see previous reports or the report appendix for the breakout of costs.

*Uplift for January 2026 totaled nearly \$850M. Please see previous reports or the report appendix for the breakout of costs.

*Uplift for January 2025 totaled nearly \$5/MWh. Please see previous reports or the report appendix for the breakout of costs.

*Uplift for January 2026 totaled nearly \$10.50/MWh. Please see previous reports or the report appendix for the breakout of costs.

Monthly Uplift as a Percent of Energy Costs

Percent of Total CT, CC and Steam Hours with LMP < Offer

- Beginning in December 2008, the daily Balancing Operating Reserves (BOR) rate was replaced with six different BOR rates: RTO BOR for Reliability Rate, RTO BOR for Deviations Rate, East BOR for Reliability Rate, East BOR for Deviations Rate, West BOR for Reliability Rate, West BOR for Deviations Rate.
- Reliability rates are charged to all real-time load and exports, whereas deviation rates, as before, are charged only to real-time deviations. RTO rates are charged to the whole footprint, whereas East and West rate adders are charged based on location.

Energy Market

Virtual Activity Summary

- The following six charts depict trends in submitted and cleared virtual and up-to-congestion transactions, in terms of number and volume, into the PJM Energy Market. The first two of these charts show the submitted and cleared increment and decrement bids (virtual transactions or virtuals) and they are the same as what was previously being presented in this report. The two charts after them display the trends in submitted and cleared up-to-congestion transactions into the PJM Energy Market. The last two of these six charts combine the virtual and up-to-congestion transactions and show the sum of these two categories.
- To clarify what a bid or transaction is, please consider the following example: An offer (increment, decrement or up-to-congestion) of 10 MW, valid for eight hours for a given day, is captured in the charts as eight submitted bids/transactions and 80 submitted MWh. If this offer fully clears for three of the hours it was submitted for, it shows in the charts as three cleared bids/transactions and 30 cleared MWh.

Virtual Bids (INCs & DEC)s - Total Number

Virtual Bids (INCs & DEC)s - Total Volume

Up-To-Congestion Transactions - Total Number

Up-To-Congestion Transactions - Total Volume

INCs, DECs and Up-To-Congestion Transactions - Total Number

INCs, DEC and Up-To-Congestion Transactions - Total Volume

Energy Market

Congestion and FTR Summary

Period	Surplus / Underfunding	Payout Ratio
May 2026	\$84,203,913	100%
2026	\$557,970,910	100%
2025/2026	\$757,051,061	100%

FTR Revenue vs. FTR Target Allocation

Ten Most Heavily Congested Transmission Facilities - Overall, May

The ten most heavily congested facilities account for 69% of total congestion for May.

Ten Most Heavily Congested Transmission Facilities - Overall, 2026

The ten most heavily congested facilities account for 68% of total congestion for 2026.

Interchange/Seams Summary

Hourly Difference Between PJM and MISO Real-Time Prices

Positive values represent hours when the PJM price was higher. Negative values represent hours when the PJM price was lower.

Hourly Difference Between PJM and MISO Day-Ahead Prices

Positive values represent hours when the PJM price was higher. Negative values represent hours when the PJM price was lower.

Hourly Difference Between PJM and NYISO Real-Time Prices

Positive values represent hours when the PJM price was higher. Negative values represent hours when the PJM price was lower.

Hourly Difference Between PJM and NYISO Day-Ahead Prices

Positive values represent hours when the PJM price was higher. Negative values represent hours when the PJM price was lower.

PJM-MISO Market-to-Market Coordination Settlement

Negative M2M Credit represents PJM payment to MISO

PJM-NYISO Market-to-Market Coordination Settlement

Negative M2M Credit represents PJM payment to NYISO
