

## **1 | 205 Filing Rights – Energy & Ancillary Services and Transmission Planning**

PJM shall have the exclusive and unilateral rights to file, pursuant to Section 205 of the Federal Power Act (FPA), changes to the following schedules of the PJM operating Agreement (these rights will be set forth in Section 10.4 of the OA):

- Schedule No. 1 (“PJM Interchange Energy Market”)
- Schedule No. 2 (“Components of Cost”)
- Schedules No. 6 (“Regional Transmission Expansion Planning Protocol”)
- Schedule No. 6-A (“Interregional Transmission Coordination Between the SERTP and PJM Regions”); and
- Schedule No. 6-B (“Interregional Transmission Coordination Between PJM, New York Independent System Operator, Inc. and ISO New England Inc.”)

With respect to these schedules, PJM will not be obligated to make a Section 205 filing of a Members Committee package pursuant to Section 10.4 (xiii) nor would the Members Committee be able to effectuate a Section 205 filing (in accordance with Section 18.6(a)), except where PJM is effectuating a Section 205 filing and the Members Committee has acted in accordance with Section 8.4 (sector-weighted two-thirds majority) to approve an alternate package with respect to Schedule Nos. 1 and 2. Accordingly, the Members Committee will retain “jump ball” rights over Schedule Nos. 1 and 2.

In the event that the Members advance a problem statement/issue charge related to Schedules 1 and 2, PJM must develop a proposal for consideration during the associated stakeholder process. This would then trigger the “jump ball” opportunity for the Members. Should the Member proposal pass by two-thirds sector-weighted majority, PJM will work to try and coordinate its proposal with the Member proposal to advance one 205 filing with the FERC. If this is not possible, then PJM would make its own 205 filing *and* would utilize its authority to concurrently file the Member proposal via “jump ball” 205 with the Commission, the intention being that both proposals would be on equal footing when filed.

In addition, while PJM intends to utilize the stakeholder processes as revised herein, PJM would replicate the language found in Section 9.2(b) of the Tariff (with notice to the Transmission Owners on Schedule No. 6).

## **2 | Revise Manual 34 To Improve Stakeholder Process Efficiency and To Include Additional Expedited Stakeholder Processes**

With the change to the Section 205 rights set forth above, Manual 34 should be amended such that Manual 34 is treated as all other PJM manuals over which PJM has responsibility pursuant to

**For Discussion Purposes Only**  
**Settlement Communication**  
**Drafted 9-16-2026 / Latest Revised 9-23-2026**  
**Term Sheet 1**

Operating Agreement Section 10.4(iii). PJM commits to a thorough examination of Manual 34 with the Members every three years, and will seek Members Committee endorsement on any changes made to Manual 34. An element of this is to address the constraint on “main motions” from lower committees and to allow PJM’s package to be considered on equal footing at every stage of the process. PJM would have an absolute right to advance its proposal on equal footing with any approved package.

PJM also proposes to amend Manual 34 to add two additional stakeholder processes that will provide for expedited consideration of issues. The first would have the following requirements: (i) triggered by the CEO; (ii) requires PJM staff to present a proposal; (iii) allows for feedback and consideration of changes to PJM’s proposal; and (iv) receives a vote by the Members on PJM’s proposed package (nonbinding for endorsement purposes). The second would create the ability for PJM, in limited circumstances, to conduct a stakeholder process principally in writing with PJM’s commitment to perform in-person or recorded education.

PJM and the stakeholders commit to working through the following additional stakeholder process reforms:

- Recording and public posting of education sessions and exploring with Members recording and public posting of full meetings beyond just education sessions;
- Submittal of Q&A documents to supplement the material;
- Reduction of time between meetings when working through complex material requiring engaged meeting participation;
- Retention of CBIR concepts while streamlining administration of CBIR process;

PJM will furnish and fund independent counsel to assist the Members Committee (including lower committees as may be necessary or appropriate) in navigating and resolving issues in the stakeholder process that have complex dynamics, multiple interests, and a high potential impact, and to provide legal advice and guidance to the Members Committee. Such independent counsel may serve to draft and support a Members Committee “jump ball” filing where applicable. The selection of such counsel would be subject to approval by the Members Committee.

### **3 | Revise PJM Committee Structure**

PJM proposes to eliminate the Markets and Reliability Committee as duplicative and refine the lower standing committees to make them more effective, subject to appropriate Committee approval. Work is duplicated in lower committees and their corresponding standing committees, especially when proposal development and votes are required at both levels. PJM proposes to refine the voting structure at the lower committees (that require a vote) to align with the Members Committee

**For Discussion Purposes Only**  
**Settlement Communication**  
**Drafted 9-16-2026 / Latest Revised 9-23-2026**  
**Term Sheet 1**

sector-weighted voting framework. For transparency purposes, PJM will publish full lower standing committee voting reports.

**4 | Extend Board Terms**

PJM would extend the term of Board service to four years, with the opportunity for two renominations (for a total of three terms, with an additional allowance for Board members who served a partial term). Members will develop and approve a transition mechanism. PJM also proposes to reduce the “cooling off” period to one year for Board appointments to allow for additional qualified candidates to be considered in the nomination process (note that restrictions on financial interests would remain). A preference will be given to qualified candidates that reside within the PJM region.

**5 | Advance Board Transparency**

PJM recognizes that there is a desire for increased transparency from the PJM Board of Managers in its independent decision-making.

The Board will commit to, with respect to Regional Transmission Organization functions (with the exception of attorney client privilege materials, critical infrastructure, and national security needs):

- publish meeting minutes and the voting result of each approval by the PJM Board of Managers of changes to the PJM governing documents (continuing its current practice);
- provide a public written explanation supporting an independent decision and how the decision will achieve a just, reasonable and not unduly discriminatory or preferential outcome along with an explanation for why it rejected certain other views. This written explanation will also provide insight into the written materials utilized to make its decision, including inputs utilized from consultants, the Independent Market Monitor and the PJM Staff.

**6 | State (including the District of Columbia) and Member “Jump Ball” 205 Filing Rights Over Resource Adequacy**

PJM proposes to utilize its Section 205 rights over the Reliability Assurance Agreement and Attachment DD of the Tariff to make a “jump ball” filing on behalf of OPSI on a matter that pertains to resource adequacy with the following conditions:

1. the matter has an approved problem statement/issue charge;
2. the states execute a Memorandum of Understanding memorializing the shared responsibility and roles between the states and PJM over reliability and resource adequacy (to be filed at FERC);

**For Discussion Purposes Only**  
**Settlement Communication**  
**Drafted 9-16-2026 / Latest Revised 9-23-2026**  
**Term Sheet 1**

3. the proposal has been approved by a simple majority of OPSI which must comprise at least 8 states and at least 66% of the load in the PJM region;

Members will similarly be provided with a “jump ball” 205 opportunity over resource adequacy.

There is an ongoing issue being considered related to the voting dynamics for both the OPSI and Member jump ball opportunities.

OPSI and the Members must develop and support all jump ball filings. If the PJM Board determines, on the basis of quantitative analysis, that any OPSI or Member jump ball proposal would substantially compromise the safety or reliability of the bulk electric system or the PJM region, it would not be required to make the filing with FERC. In that case, PJM shall append its analysis and the OPSI or Member proposal to the PJM filing, and PJM’s determination to not file such proposal shall be subject to FERC review.

## **7 | State Participation in PJM Processes**

PJM proposes to increase state participation in PJM in two ways. First, PJM will work with the states to enhance OPSI to include a structure such that each state speaks with one voice through OPSI. PJM would support increased funding for a reconstituted OPSI, recognizing not only the addition of the executive branch, but also the need for greater engagement in the stakeholder process. Second, PJM proposes to revise the stakeholder process to allow for OPSI to make a proposal on equal footing with any Member proposal or any PJM proposal in the area of resource adequacy, at any stage in the stakeholder process. Third, the limitation on one statutory consumer advocate per jurisdiction will be removed, such that all statutory consumer advocates can join as Members.

## **8 | State Participation on the Nominating Committee for the PJM Board of Managers**

PJM supports the addition of state appointees to the Nominating Committee. There is an ongoing issue being considered related to the number of state appointees.

## **9 | Annual Prioritization Process and Work Plan**

This process is meant to establish an annual work plan for PJM and stakeholders in the stakeholder process and Manual 34 will need to be amended accordingly.

- PJM, states and Members shall develop a Joint Steering Committee (JSC) that will serve to develop an annual work plan for the stakeholder process and to identify short and long-term priorities.
- The structure and responsibilities of the JSC shall be codified in PJM Manual 34.

**For Discussion Purposes Only**  
**Settlement Communication**  
**Drafted 9-16-2026 / Latest Revised 9-23-2026**  
**Term Sheet 1**

- The JSC shall be comprised of Members, states and PJM as follows: one representative from each Member sector, plus the Members Committee Chair and Vice Chair. The states, through OPSI, would nominate two representatives. PJM will designate the Chief Strategy Officer and appropriate senior management to provide input on proposed stakeholder priorities.
- In the third quarter of each year, the JSC will meet to discuss priorities and to identify consensus matters that PJM and/or stakeholders should address in the next year and over a longer-term (3-5 year) horizon.
- The JSC shall thereafter produce an annual work plan for work to be conducted within the stakeholder process for the following year.
- The proposed work plan will be presented to the Members Committee and to the PJM Board.
- The work plan should assist the Board in its evaluation of PJM management effectiveness.
- The JSC will finalize the work plan, and will meet quarterly the following year, or as needed, to assess progress on the priorities and to recommend adjustments as contingencies arise.
- An “inject” process would be developed by the JSC that will allow for the annual work plan to be amended due to emergent matters.

**10 | Adding Public Interest Mandate to the Operating Agreement, Wholesale/Retail Impact Statement and Cost Analyses for Certain Proposals**

PJM supports the addition of a public interest mandate to Section 7.7 of the Operating Agreement – “operate in the public interest pursuant to its obligations as a FERC-regulated Regional Transmission Organization.”

On matters of significance that could necessitate independent action by the Board of Managers related to changes to governing documents on Markets and Planning, PJM will develop for the Board of Managers an “Impact Statement” of proposals for the Board’s review. This document will be made available to stakeholders prior to submittal to the Board of Managers. Conceptually, this document will endeavor to include the following sections:

- Key drivers of costs and anticipated benefits that consider the observable impact of major decisions on Markets and Planning (including any stakeholder analyses);
- Assessment of the extent of how the proposal serves the public interest – both short and long term; and
- Information related to how decisions can affect the mechanics of competitive retail electricity markets, such as timing of processes or established arrangements (PJM will seek stakeholder input to incorporate into impact statement).

**For Discussion Purposes Only**  
**Settlement Communication**  
**Drafted 9-16-2026 / Latest Revised 9-23-2026**  
**Term Sheet 1**

For any Markets or Planning proposal being considered in a Standing Committee for which the approved Issue Charge indicated a requirement for a cost impact analysis, the proposer must provide independent analysis performed by themselves or a third-party of potential cost impacts before that proposal may be voted.
