## Congestion Management Process / Freeze Date

CMP members continue to meet on a regular basis working through Freeze Date data analysis.

May 29,2025May 6, 2025June 26, 2025Last CMPWGLast CMPNext CMPWGmeetingCouncil meetingmeeting

May CMP meetings focus on planning processes in determining Firm vs Non Firm values submitted for Generator Priority Schedules and Designated Network Resources

## Congestion Management Process / Freeze Date

#### Other Areas of Focus in CMPWG

Firm Flow Limit Update
Considering PFV for FFL

Energy Storage Resource
Considerations in Market Flow
Calculation

FERC Order 881 Impacts to Flowgate Allocation

Review Current Transmission Upgrade Study Process

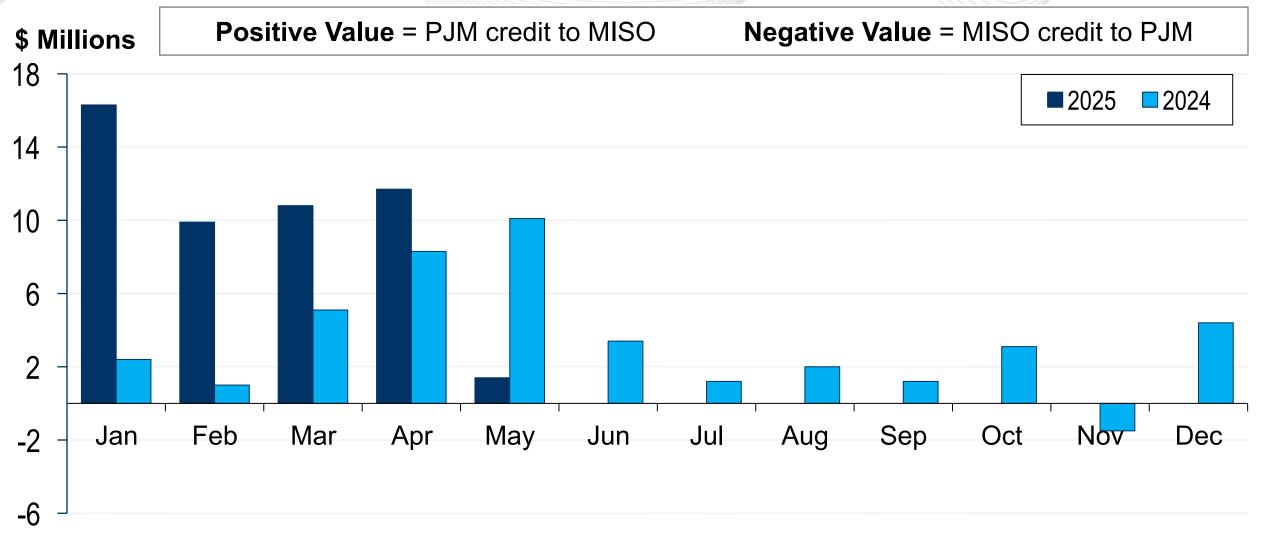

# Market-to-Market Metrics based on Joint Operating Agreements

#### M2M Coordination with MISO

- PJM-MISO JOA Attachment 2 Congestion Management Process
- PJM-MISO JOA Attachment 3 –
   M2M Coordination
- PJM-NYISO JOA Schedule D –
   M2M Coordination & PAR Coordination

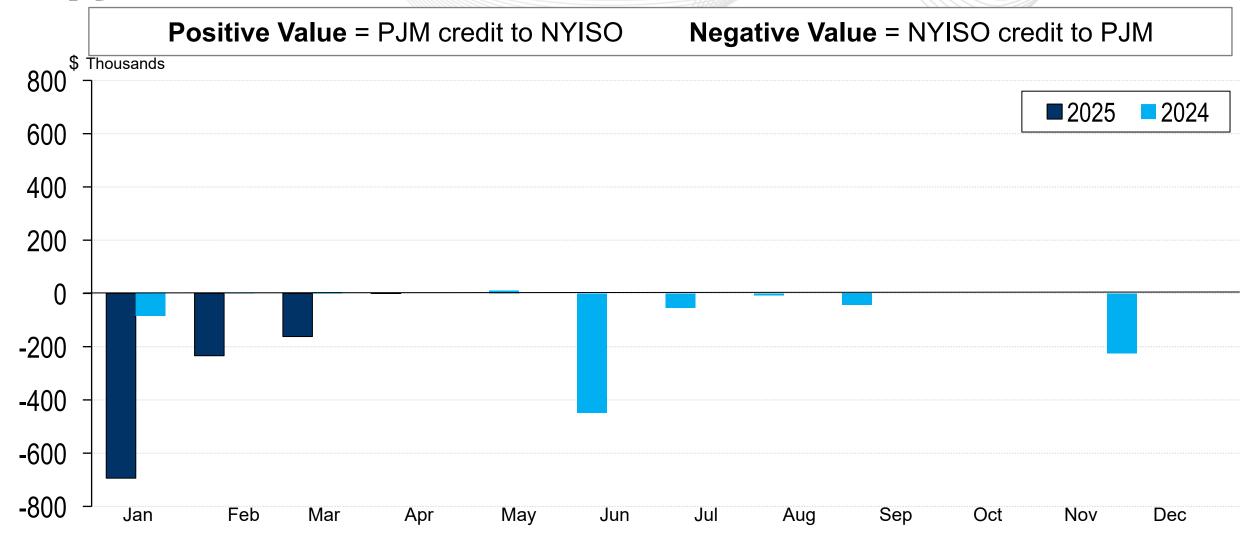

#### YTD MISO M2M Credit

#### YTD NYISO PAR Coordination Credit

- NYISO is installing two new phase angle regulators (PARs) at the Dover station. The new PARs will be located on the Dover – Long Mountain 398 intertie between NYISO and ISONE.
- The Dover PARs are expected in-service in October 2025.
- NYISO is adding the new Dover PARs to the NYISO-PJM Joint Operating Agreement (JOA).
- PJM studied the impact of the Dover PARs on the existing PJM PAR coordinated, and Redispatch Flowgates with NYISO. The PAR shift factors are minor, or zero on the existing coordinated Flowgates.

 The NYISO-PJM Joint Operating Agreement (JOA) is being updated to reflect the recent NYISO change.

35.23 Schedule D – Market-to-Market Coordination Process – Version 1.0

5.6 <u>Compute the PAR Effects for all Flowgates</u>

 For the PARs listed in Table 4 below, the RTOs will determine the generation-to-load flows and interchange schedules, in MWs, that each PAR is impacting.

<sup>\*</sup>Pursuant to the rules for implementing the M2M coordination process over the NY-NJ PARs that are set forth in this M2M Schedule.

- PJM and TVA coordinating on Joint Emergency Energy Agreement
  - Similar to MISO-TVA agreement filed with FERC in December 2024
  - Addresses TVA limitations for Emergency Energy Sales
    - TVA not limited in purchase, only in sale as outlined in the amended TVA Act of 1959, known as the TVA Fence
  - Agreement will utilize PJM members that fall within TVA Fence
  - Next meeting scheduled for June

## MISO/PJM Joint Stakeholder Meeting

Feb. 7, 2025 - Most recent Joint and Common Market meeting was held.

**Sep. 12, 2025** – Next joint stakeholder meeting will be hosted by PJM via WebEx.

Meeting materials are posted approximately one week in advance on the **PJM Meeting Center**: <u>PJM – PJM/MISO Joint & Common Market Initiative</u>.

CMPC requested the CMPWG to review principles and the usage of PFV as an alternative to Freeze Date.

CMPC understands the urgency of the Freeze Date solution.

#### Parallel Flow Visualization (PFV)

- PFV is an Eastern Interconnect agreed solution that improves the wide area view of RCs and equips them to assign relief obligations during periods of congestion that are more representative of those contributing to congestion.
- Uses Generation to Load (GTL) Flow Concept for all BAs, replacing the previous used Network and Native Load (NNL) Flow relief obligation and Market Flow construct
- GTL Priorities GTL incorporates new methods to establish transmission priority of a generator. (established under v3.3 of the NAESB WEQ-008 TLR standard)
- Specifically looking to leverage the Generator Prioritization Method and associated Generator Prioritization Schedules (GPS) to establish Firm Market Flow entitlements for use in M2M settlements vs the Freeze Date method.
- The GPS data submission to the IDC is required of the RTO/ISO (i.e. all the market entities have designated this methodology under the NAESB standard)

The IDC PFV engine already calculates real time firm and non-firm right values based on the GPS method for market entities.

Aligns entities with Industry Standard NAESB WEQ-008 version 3.3 Reduces complexity of processes by utilizing real time data.
