

PJM Markets & Reliability Committee

Exelon Alternate Issue Charge (Tweaks to Constellation Alternate Issue Charge)

Storage Integration (Phase II): Transmission Asset Utilization in Operations

6. Identify the use case for which the battery is planned and identify the times to operate that are consistent with that use case.
6. Develop the use cases for which the battery is planned and identify the times to operate that are consistent with those use cases.
7.
 - d. Identify what the market impacts could be and a commitment to address them. Included in those market impacts could be charging and discharging revenues and re-dispatch. Included in those market impacts could be: charging and discharging revenues and re-dispatch.
 - d. Ensure a storage device identified as transmission only and not a market resource is treated no differently than any other transmission asset, including with respect to market impacts. Ensure that PJM has situational awareness of the operation of the storage device, including identification of market impacts such as charging and discharging revenues and re-dispatch.
 - e. Develop rules setting the priority of use of the battery in relation to market-based resources.
 - e. Develop rules setting the use of the battery as a transmission resource only
