

System Operations Report

Marcus Smith, Lead Engineer –
Markets Coordination

David Kimmel, Sr. Engineer II –
Performance Compliance

Operating Committee

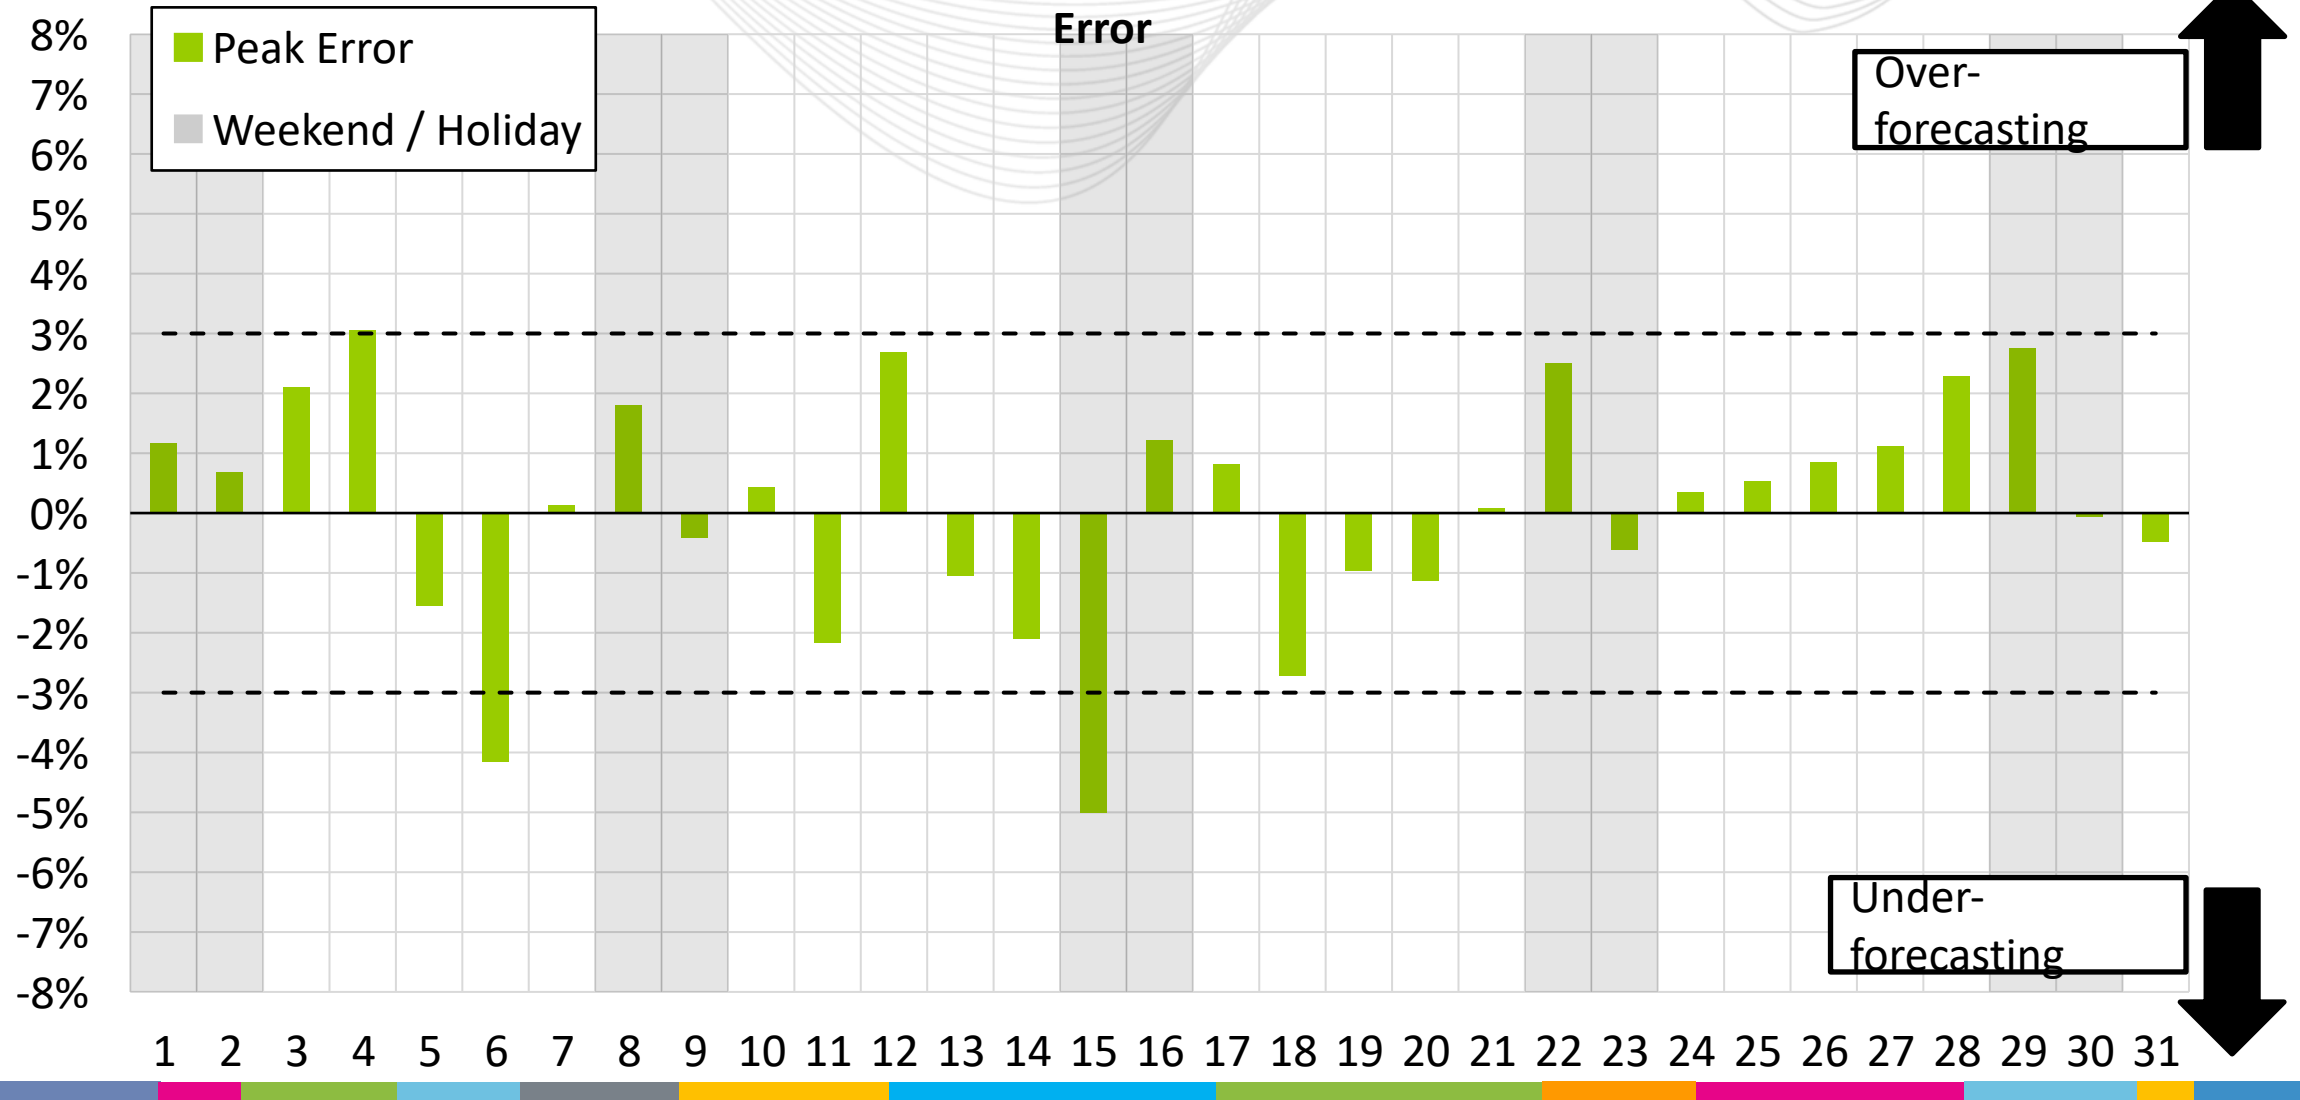

April 3, 2025

Average Load Forecast Error

Daily Peak Forecast Error (March)

18:00 Day Ahead Forecast

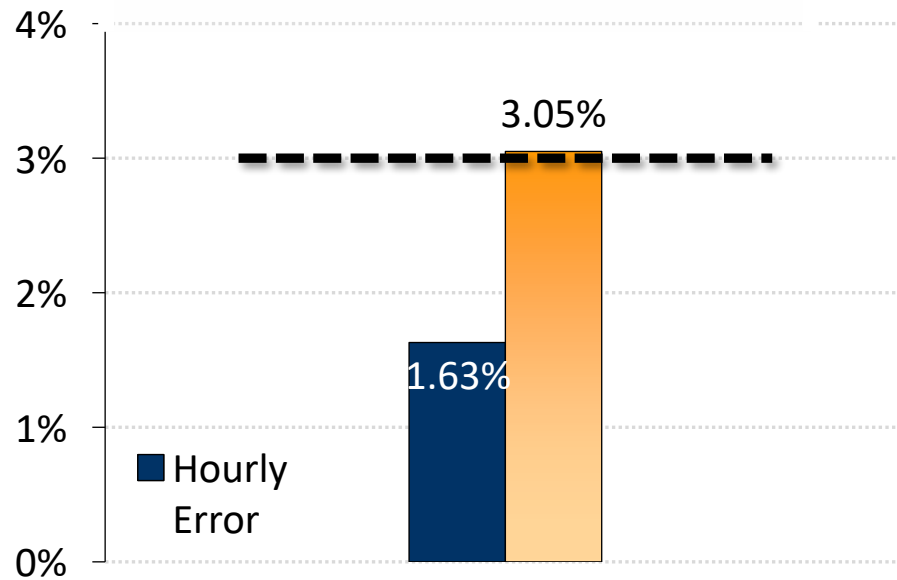

Days Exceeding 3% Forecast Error at Peak Hour

Over-forecasting

Mar. 4

Temperatures came in 4-7°F warmer than forecast across many regions, leading to lower loads and over-forecasting

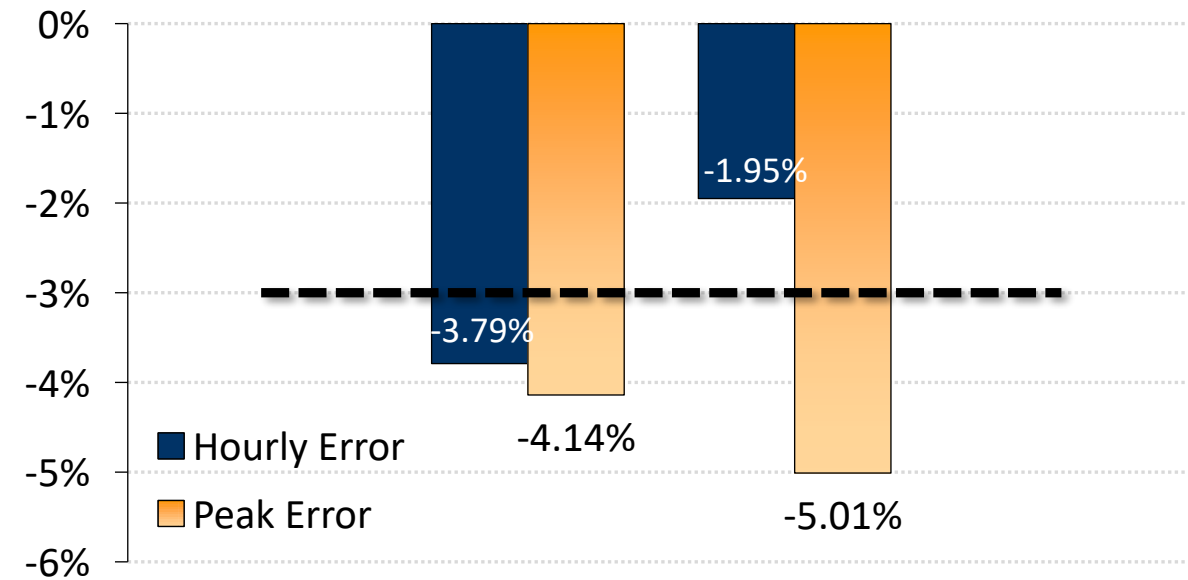

Under-forecasting

Mar. 6

A period of mild temperatures ended with colder conditions, leading to higher load response and under-forecasting.

Mar. 15

Temperatures in the east came in ~10°F cooler than forecast, leading to higher loads and under-forecasting.

Monthly BAAL Performance Score

PJM’s BAAL performance has exceeded the goal of 99% for each month in 2024 and 2025.

- The following Emergency Procedures occurred:
 - 3 Shared Reserve events
 - 1 High System Voltage Action
 - 7 Post Contingency Local Load Relief Warnings

- 6 Shortage Cases Approved
- The approved Shortage Cases occurred on:
 - 03/15/2025:
 - 2 shortage cases approved
 - Factors: line tripping
 - 03/19/2025:
 - 4 shortage cases approved
 - Factors: load increase and reduced available reserve

RTO Generation Outage Rate - Monthly

The 13-month average forced outage rate is 4.44% or 8,782 MW.

The 13-month average total outage rate is 15.70% or 30,978 MW.

2024-2025 Planned Emergency, Unplanned, and Total Outages by Ticket (Transmission Only)

Note: "Unplanned Outages" include tripped facilities. One tripping event may involve multiple facilities.

PCLLRW Count Vs. Peak Load – Daily Values For 3 Months

- There have been no spin events for the month of March 2025

Appendix

Goal Measurement: Balancing Authority ACE Limit (BAAL)

- The purpose of the new BAAL standard is to maintain interconnection frequency within a predefined frequency profile under all conditions (normal and abnormal), to prevent frequency-related instability, unplanned tripping of load or generation, or uncontrolled separation or cascading outages that adversely impact the reliability of the interconnection. NERC requires each balancing authority demonstrate real-time monitoring of ACE and interconnection frequency against associated limits and shall balance its resources and demands in real time so that its Reporting ACE does not exceed the BAAL ($BAAL_{LOW}$ or $BAAL_{HIGH}$) for a continuous time period greater than 30 minutes for each event.
- PJM directly measures the total number of BAAL excursions in minutes compared to the total number of minutes within a month. PJM has set a target value for this performance goal at 99% on a daily and monthly basis. In addition, current NERC rules limit the recovery period to no more than 30 minutes for a single event.

RTO Generation Outage Rate - Daily

The 13-month average forced outage rate is 4.44% or 8,782 MW.

The 13-month average total outage rate is 15.70% or 30,978 MW.

PCLLRW Count Vs. Peak Load – Daily Values For 13 Months
