Needs

Stakeholders must submit any comments within 10 days of this meeting in order to provide time necessary to consider these comments prior to the next phase of the M-3 process

Need Number: ACE-2026-002

Process Stage: Need Meeting 03/18/2026

Project Driver: Equipment Material Condition, Performance and Risk, Operational Flexibility and Efficiency

Specific Assumption Reference:

- Enhancing system functionality, flexibility, visibility, or operability
- Transmission infrastructure replacements (EOL/condition/obsolescence) that are consistent with efficient asset management decisions

Problem Statement:

- The Glassboro 69kV bus is tapped off the Monroe-Rowan 69kV line and does not contain any circuit breakers or fault-interrupting devices.
- In the event of an outage on the Monroe-Rowan 69kV line, this configuration could cause the substation to become de-energized.
- Inspections of the Glassboro 69kV substation identified the electromechanical relays are in poor condition and need to be replaced.
