

EPAM

EPAM is a leading digital transformation services and product engineering company, providing a wide range of services in the US and worldwide. EPAM's operations in the US are part of its global presence, which spans over 130+ delivery centers in more than 55+ countries. The services provided by our team, which includes over 56,000 consulting and engineering professionals, includes:

- Digital platform engineering and software development
- Delivering business and technology transformation from start to finish
- Integrating strategic business and innovation consulting, design thinking, and physical-digital capabilities to deliver real business value.

For our power sector clients, we combine technical expertise with deep commercial and operational knowledge of PJM and other ISOs to solve difficult challenges in areas such as:

- **Trading and Risk Management systems**, including Allegro and Openlink
- **Physical Power systems**, such as SCADA and GMS/EMS
- **Custom solutions for forecasting, trading and hedging**, combining cutting-edge AI and machine learning with the latest advancements in data management and analytics

In conjunction with our Cloud partners like AWS, GCP, and Microsoft Azure, EPAM also offers a comprehensive range of cloud services, from strategy to migration, modernization, and optimization. We work with our energy clients to transform their digital landscapes from traditional on-premise environments to fast, scalable and highly secure Cloud ecosystems. Our team understands the unique requirements of the electricity industry such as NERC CIP compliance and are trusted by some of the largest US power companies as a key partner in advancing their IT organizations. Our Cloud transformation advisory areas include:

- Enterprise-wide and application-specific **data transformations** using the latest technology stacks, such as **Databricks** and **Snowflake**
- **Cybersecurity services** designed specifically for power companies, including audits, vulnerability assessments, incident response, and security monitoring, leveraging the latest approaches in proactive defense, actionable intelligence, and rapid threat response
