

DR Hub Updates for 202c Generators

Andrea Yeaton

Lead Analyst, Demand Side Markets

DISRS

October 5, 2026

Disclaimer: While materials are current at the time of publishing, applicable requirements may change. PJM Governing Documents control.

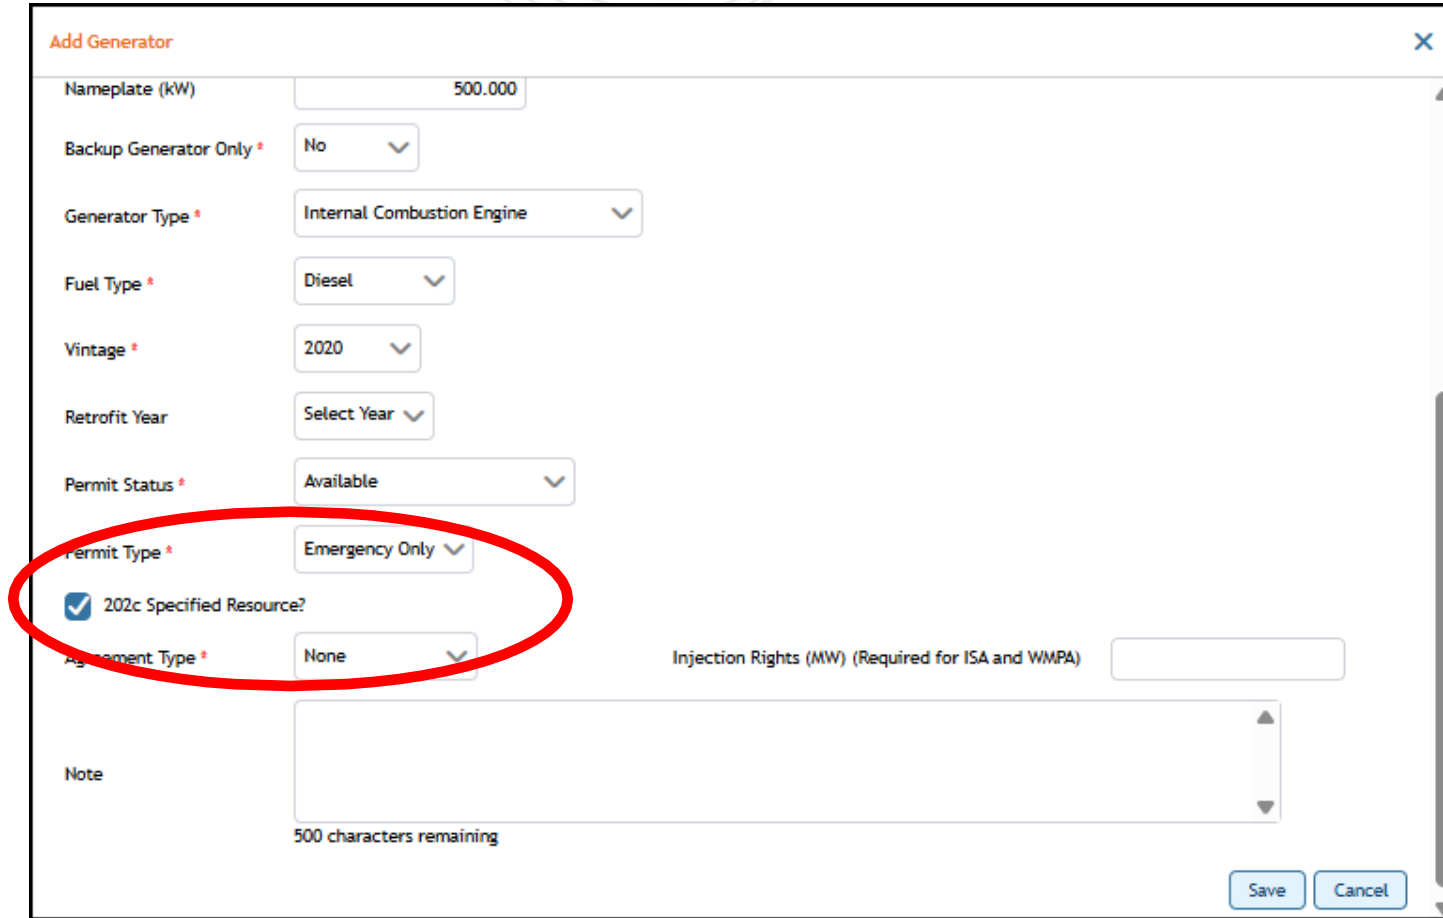

- When anticipating challenging operating conditions, PJM can request a DOE 202c waiver for generators with environmental limitations.
- Generators operating under the 202c waiver report daily run time hours to PJM who in turn reports to DOE
 - Example [Daily Compliance Report](#) (Sept 17, 2026)
- PJM needs to understand the potential magnitude of response from CSP-operated 202c generation during emergencies

- 202c Specified Resource checkbox added to DR Hub on 9/24/2026
- Location Details screen

Generator Attributes

Generator Attributes																
Actions	ID ↑	Name	Non-Retail BTMG	Max Output (kW)	Nameplate (kW)	Backup Generator Only	Generator Type	Fuel Type	Vintage	Retrofit Year	Permit Status	Permit Type	202c Specified Resource?	Note	Agreement Type	Injection Rights (MW)
 	83950	Gen 2	Yes	34		Yes	Internal Combustion Engine	Diesel	2024		Available	Emergency Only	No	No	ISA (wholesale)	
 	83951	Andrea's gen	No	500	500	No	Internal Combustion Engine	Diesel	2020		Available	Emergency Only	Yes	No	None	N/A

- Update Generator

Add Generator [X]

Nameplate (kW)

Backup Generator Only *

Generator Type *

Fuel Type *

Vintage *

Retrofit Year

Permit Status *

Permit Type *

☒ 202c Specified Resource?

Agreement Type *

Injection Rights (MW) (Required for ISA and WMPA)

Note

500 characters remaining

- Current functionality when adding a generator to a location
 - Automatic update to the Maximum Load Reduction Capability on the Location
 - Economic registrations use the Max Load Reduction to set the EcoMax in Markets Gateway
 - Load Management registration will display the Max Load Reduction the next time a registration is created
- Proposed new checkbox for choosing to update location and registration values when the 202c Specified Resource box is checked
 - By default (not checked), the 202c designated generator would not update the Max Load Reduction Capability on the location or registrations
 - If checked, automatic updates would take place (current functionality)

- Additional Information on Demand Response 202c Specified Resources
