# DR Hub: Emergency Energy Settlement Task

- CSP goes to each emergency energy settlement and:
  - Adjusts first 1 or 2 settlement hours associated with the notification time of the registration
  - DR Hub default is that all load management registrations began reductions when notified
    - If the registration did not start load reduction when notified (notification time), then CSP should deselect settlement hours as appropriate
  - **Ensures all selected settlement hours are one contiguous block**

# De-selecting Notification Time Hours

- PJM allows the CSP to de-select hours only if the site has not started to reduce *during the notification period*.
  - For QUICK lead (30 min): only de-select the first hour only if the notification time is ***after*** the 30-minute mark of that hour.
  - For SHORT lead (60 min) only de-select the first hour.
  - For LONG lead (120 min) only de-select the first two hours (must be contiguous – if the 2nd hour is de-selected then so must the first hour be de-selected).
- **No other hours at the start of a Load Management event are allowed to be de-selected**.

# Deselecting Release Time Hours

- Any hour less than 30 minutes at the end of a Load Management event may be deselected by the CSP.

- Example: Event release time 21:15
  - HE 22 may be deselected
  - That hour would not be used for compliance and therefore *may* be deselected by the CSP for emergency energy settlement.
