

Google

As a leader in energy innovation, Google is helping build the systems needed to power a brighter future for all. We've spent more than a decade adding more than 22 gigawatts (GW) of new energy to global grids — the equivalent of powering 4.7 million American homes per year.

To learn more, visit [Google's energy solutions page](#) and explore [Google's collaboration with Tapestry and PJM](#) to develop AI-driven data capabilities for a smarter, more reliable electricity system.
