

345kV/765kV Combined Project

General Information

Proposing entity name	Confidential
Does the entity who is submitting this proposal intend to be the Designated Entity for this proposed project?	Confidential
Company proposal ID	Confidential
PJM Proposal ID	907
Project title	345kV/765kV Combined Project
Project description	345kV Solution + 765kV Solution The proposed Project represents a comprehensive system enhancement that will resolve 626 thermal flowgates and 1044 voltage flowgates in the FE-ATSI and AEP zones respectively by creating a parallel path to the existing 138kV infrastructure in FE-ATSI area and reinforcing the 765kV network around the Marysville and Vassell substations. The solution strengthens both the 765kV and 345kV networks from a thermal and voltage stability perspective under critical N-1-1 outages affecting either network. The solution is also robust enough to accommodate load growth not only in the FE and AEP areas, but also in the AES Dayton system, due to the extension of the 765kV and 345kV corridors around the greater Columbus area. The solution consists of nine greenfield components to be built by the Project Team and seven station/line upgrades by incumbents.
Email	Confidential
Project in-service date	03/2032
Tie-line impact	Yes
Interregional project	No
Is the proposer offering a binding cap on capital costs?	Yes
Additional benefits	Confidential

Project Components

1. 345kV Greenfield Transmission Line from 345kV Transmission Line Upgrades to New 345kV Madison Yard Greenfield Station
2. 345kV Greenfield Transmission Line (Double Circuit) from 345kV Madison Yard Greenfield Station to Existing 138kV Melissa Station
3. 345kV Greenfield Transmission Line from 345kV Madison Yard Greenfield Station to 765/345kV New Greenfield Station
4. 765kV Greenfield Transmission Line from Existing 765kV Marysville Station to New 765kV Fostoria Yard Greenfield Station
5. 765kV Greenfield Transmission Line from Existing 765kV Marysville Station to Existing 765kV Vassell Stations
6. 765kV Greenfield Transmission Line from Marysville Station to 765/345kV Greenfield Station
7. 345kV Madison Yard Greenfield Station
8. 765/345kV New Greenfield Station
9. 765kV Fostoria Yard Greenfield Station
10. 345kV Greene Station Upgrade
11. 345kV Madison Station Upgrade
12. 345/138kV Melissa Station Upgrade
13. 765kV Marysville Station Upgrade
14. 345kV Fostoria Central Station Upgrade
15. 765kV Vassell Station Upgrade
16. 345kV Transmission Line Upgrades from Existing 345kV Greene Station to New 345kV Greenfield Transmission Line

Greenfield Transmission Line Component

Component title	345kV Greenfield Transmission Line from 345kV Transmission Line Upgrades to New 345kV Madison Yard Greenfield Station	
Project description	Confidential	
Point A	Greene Station	
Point B	345kV Madison Yard Greenfield Station	
Point C	Normal ratings	Emergency ratings
Summer (MVA)	1494.000000	1872.000000
Winter (MVA)	1689.000000	2074.000000

Conductor size and type	Two (2) 954 kcmil ACSR "Cardinal" conductors per phase
Nominal voltage	AC
Nominal voltage	345
Line construction type	Overhead
General route description	The 16 mile line travels generally east - west. The route is primarily through farm fields and 100% of this greenfield circuit follows (parallels) an existing transmission ROW.
Terrain description	The terrain for the route is largely characterized as generally flat and primarily traverses farmlands. There are some soft, rolling grade differences (not quite hills) on the eastern end of the route.
Right-of-way width by segment	The new transmission line will require a new right of way assumed to be 100-ft wide. The ROW widths have been selected to meet with NESC blowout requirements and minimize footprint impacts to surrounding areas.
Electrical transmission infrastructure crossings	Overhead Crossing of a 69kV line, Overhead crossing of two (2) 138kV lines in the same ROW
Civil infrastructure/major waterway facility crossing plan	Refer to attached crossing plan attached pdf

Environmental impacts	The Greene to Madison (Segment 2) route was designed to minimize impacts on physical & environmental resources by using overhead transmission (OH) and placing structures/spans to avoid impacts to resources. The second segment of this route proposes to co-locate on existing transmission ROW to minimize impacts. Specific considerations that were evaluated include: Wetlands: Where feasible, permanent structures (towers) will be placed outside of wetlands. Construction workspace will be minimized and where avoidance is unfeasible, wetland access/timber support mats will be used to minimize rutting & soil displacement. Appropriate wetland mitigation and restoration will occur. Waterways: Waterways will be spanned via OH lines and structures will be placed above the ordinary high-water mark where possible. Temporary construction mat bridges & culverts will be used to cross smaller streams where equipment travel is needed. Structures will be sited outside floodzones where feasible. Forest & Riparian Habitat: This route crosses ~1.5 miles of forested land. The Project will adhere to bat & migratory bird TOYR for tree clearing & will minimize the amount of tree clearing to the extent possible. Terrestrial Wildlife: No significant impacts to terrestrial wildlife are anticipated. The Project will plan construction activities to avoid critical breeding/migration periods in accordance with agency consultation. Sensitive Species/Natural Areas: The Project will consult with Ohio DNR & U.S. Fish and Wildlife Service to identify sensitive species that may occur in the route area. No critical habitat or designated natural areas are expected to be impacted. Farmland/Conservation Easements: The Project will coordinate with landowners and agencies to minimize impacts on Ag land and conservation easements. Four agricultural easements appear to be crossed by this route. Cultural: This route is not within 1,000 feet of known National Register of Historic Places. The Project Team will complete Phase I cultural surveys and consult with regulatory agencies regarding survey findings. Recreational: This route crosses a recreational trail north of Old Town/Xenia & is 0.2 miles north of the Great Council State Park. The Project proposes to use existing transmission structures to install this line therefore no direct impact to this area is anticipated. Federal/State Land: No federal or state owned land is anticipated to be crossed by the route based on desktop reviews.
Tower characteristics	This 345kV single circuit will utilize Monopoles in a delta configuration.

Point A	345kV Madison Yard Greenfield Station	
Point B	Melissa Station	
Point C		
	Normal ratings	Emergency ratings
Summer (MVA)	1494.000000	1872.000000
Winter (MVA)	1689.000000	2074.000000
Conductor size and type	Two (2) 954 kcmil ACSR "Cardinal" conductors per phase, Two (2) circuits	
Nominal voltage	AC	
Nominal voltage	345	
Line construction type	Overhead	
General route description	The 345kV line will be approximately 12.7 miles and travels generally southeast - northwest from the greenfield station 345kV Madison Yard to the existing Melissa 345kV station.	
Terrain description	The terrain for the route is largely characterized as generally flat and primarily traverses farmlands.	

Right-of-way width by segment	The new transmission line will require a new right of way assumed to be 100-ft wide. The ROW widths have been selected to meet with NESC blowout requirements and minimize footprint impacts to surrounding areas.
Electrical transmission infrastructure crossings	Overhead Crossing of East Springfield - Tap OH 138kV and London - East Springfield OH 138kV (in same ROW), Overhead OH Crossing of a 69kV line
Civil infrastructure/major waterway facility crossing plan	Refer to attached crossing plan - attached pdf
Environmental impacts	<p>The Madison to Melissa route was designed to minimize impacts on physical and environmental resources by using overhead transmission (OH), positioning structures/spans to avoid direct resource impacts and routing within agricultural land. Physical and environmental considerations that were evaluated to minimize resource impacts include: Wetlands: Where feasible, permanent structures (towers) will be placed outside of wetlands. Construction workspace will be minimized and where avoidance is unfeasible, wetland access/timber support mats will be used to minimize rutting & soil displacement. Appropriate wetland mitigation and restoration will occur. Waterways: All surface waters will be spanned via OH transmission lines and structures will be placed above the ordinary high-water mark. Temporary construction mat bridges & culverts will be used to cross smaller streams if needed. Structures will be sited outside flood zones where feasible.</p> <p>Forest/Riparian Habitat: This route crosses ~0.3 mile of forested land. The Project will adhere to applicable bat and migratory bird TOYR for tree clearing activities. Terrestrial Wildlife: No significant impacts to terrestrial wildlife are anticipated; activities will be planned to avoid critical breeding/migration periods in accordance with agency consultation. Sensitive Species/Natural Areas: The Project will consult with Ohio DNR and U.S. Fish and Wildlife Service to identify sensitive species that may occur in the route area. No critical habitat or designated natural areas are expected to be impacted. Farmland/Conservation Easements: The Project will coordinate with landowners and agencies to minimize impacts on Ag land and conservation easements. Based on initial desktop review, it appears nine agricultural easements may be crossed by the Madison to Melissa route; this information will be reviewed with the appropriate regulatory agencies and property owners upon a potential bid award to confirm details and potential restrictions of the easements if applicable. Cultural Resources: This route is not within 1,000 feet of known National Register of Historic Places. The Project will complete Phase I cultural surveys and consult with the State regarding survey findings. Recreational Areas: This route crosses a recreational trail (Prairie Grass Trail) south of Highway 42. Only short-term impacts to trail use are anticipated. Federal/State Land: No federal or state owned land is anticipated to be crossed by the route.</p>

General route description	A 24.6 mile circuit that travels generally west - east, paralleling the existing Madison - Beatty 345kV circuit. The route then turns north-south to the new station . The route is primarily through farm fields and roughly a quarter (22.4%) of this circuit parallels an existing ROW.
Terrain description	The terrain for the route is largely characterized as generally flat and primarily traverses farmlands.
Right-of-way width by segment	The new transmission line will require a new right of way assumed to be 100-ft wide. The ROW widths have been selected to meet with NESC blowout requirements and minimize footprint impacts to surrounding areas.
Electrical transmission infrastructure crossings	crossing overhead - London - East Springfield OH 138kV and Beatty - London Tap OH 138kV (same ROW), Madison -Beatty OH 345kV
Civil infrastructure/major waterway facility crossing plan	Refer to attached crossing plan attached pdf

Environmental impacts	The Madison to 765/345kV New Greenfield Station route was designed to minimize impacts on physical and environmental resources by using overhead transmission (OH), siting structures/spans to avoid direct resource impacts where feasible, and co-locating ~5.6 miles of the route with existing transmission ROW. Physical & environmental considerations that were evaluated to minimize resource impacts include: Wetlands: Construction workspace & temporary access roads will be located to minimize and/or avoid wetland impacts to the extent practicable. Where avoidance is unfeasible, timber matting will be used to minimize rutting and soil displacement. Appropriate wetland mitigation and restoration will occur. Structures will be sited outside floodzones where feasible. Waterways: All surface waters will be spanned via OH transmission lines and structures will be placed above the ordinary high-water mark. Temporary construction mat bridges & culverts will be used to cross smaller streams where equipment travel is needed. Structures will be placed outside of flood zones where feasible. Forested Area: Per desktop review, Based on desktop reviews, this route crosses ~1.0 mile of forested land. The Project will adhere to applicable bat and bird TOYR for tree clearing activities. Terrestrial Wildlife: No significant impacts to terrestrial wildlife are anticipated by construction of this route. The Project will plan construction activities to avoid breeding periods in accordance with agency consultation & permits. Sensitive Species/Natural Areas: The Project will consult with Ohio DNR and U.S. Fish and Wildlife Service to identify sensitive species that may occur in the route area. No critical habitat or designated natural areas are expected to be impacted. Farmland/Conservation Easements: The Project will coordinate with landowners and agencies to minimize impacts on Ag land and all Ag easements. Two agricultural easements are crossed by this route. Cultural Resources: Based on preliminary analysis, this route is not within 1,000 feet of known National Register of Historic Places properties. Phase I cultural surveys will be completed and consultation with the State Historic Preservation Office regarding survey findings will occur. Recreational Areas: This route crosses a recreational trail (Ohio to Erie Trail) south of Highway 42. Only minor, short-term impacts to trail use are anticipated. Federal/State Land: No federal or state owned land is crossed by the route.

General route description	A 56.8 mile circuit that travels generally north - south. The route is primarily through farm fields.	
Terrain description	The terrain throughout the route is generally flat.	
Right-of-way width by segment	The entire circuit will be new 200-ft wide ROW.	

Electrical transmission infrastructure crossings	Crossing Below - Sorensen - Marysville OH 765kV, Overhead Crossing - East Lima – Marysville 345kV OH (2 circuits), Overhead Crossing - Two 138kV OH circuits
Civil infrastructure/major waterway facility crossing plan	Refer to attached crossing plan pdf
Environmental impacts	<p>The Marysville – New 765kv Fostoria Yard route was designed to minimize impacts on physical and environmental resources by using overhead transmission (OH), positioning structures/spans to avoid direct resource impacts and routing within agricultural land. Specific physical and environmental considerations that were evaluated to minimize resource impacts include:</p> <ul style="list-style-type: none"> Wetlands: Construction workspace and temporary access roads will be located to minimize and/or avoid wetland impacts to the extent practicable. Where avoidance is unfeasible, mitigation measures will be used including timber matting, invasive species mgmt plan and wetland setbacks for equipment storage. Appropriate wetland mitigation and restoration will occur. Structures will be sited outside floodzones where feasible. Waterways: All surface waters will be spanned via OH transmission lines and structures will be placed above the ordinary high-water mark. Temporary construction mat bridges & culverts will be used to cross smaller streams where equipment travel is needed. All efforts will be made to place structures outside of flood zones where feasible. Forest Habitat: Based on desktop reviews, this route crosses ~4.4 miles of forested land. The Project will adhere to applicable bat and migratory bird TOYR for tree clearing activities. Terrestrial Wildlife: No significant impacts to terrestrial wildlife are anticipated by construction of this route. Sensitive Species/Natural Areas: The Project will consult with Ohio DNR and U.S. Fish and Wildlife Service to identify sensitive species that may occur in the route area. No critical habitat or designated natural areas are expected to be impacted. Farmland/Conservation Land: The Project will coordinate with landowners and agencies to minimize impacts on Ag land and conservation easements. No agricultural easements were found along this route based on initial reviews. Cultural Resources: This route is not within 1,000 feet of known National Register of Historic Places. The Project will complete Phase I cultural surveys and consult with the State regarding survey findings. Recreational Areas: This route crosses a recreational trail south of Highway 36. Only minor, short-term impacts to trail use are anticipated during construction. No other designated recreational area will be affected. Federal and State Land: Based on initial desktop reviews of publicly available GIS data, no federal or state owned land is crossed by the route.

Nominal voltage	765	
Line construction type	Overhead	

General route description	The route is 42.5 miles long and it travels through 2 counties. It primarily goes through farm fields, and is generally flat. The first section stays in an east-west direction, to stay north of Delaware, Ohio. The second section starts to head south, in the vicinity of I-71, towards Vassell, coming in from the east of the station.
Terrain description	The terrain throughout the route is generally flat.
Right-of-way width by segment	The entire circuit will be new 200-ft wide ROW.
Electrical transmission infrastructure crossings	Crossing Below - Marysville – Maliszewski OH 765kV, Crossing Below- Marysville – Flatlick OH 765kV, Overhead Crossing - Four 69kV OH lines, Overhead Crossing - Two 138kV OH Lines
Civil infrastructure/major waterway facility crossing plan	Refer to attached crossing plan pdf
Environmental impacts	The Marysville to Vassell route was designed to minimize impacts on physical and environmental resources by using overhead (OH) transmission, positioning structures/spans to avoid resource impacts where feasible, & routing within largely agricultural land. Specific physical and environmental considerations that were evaluated to minimize impacts include: Wetlands: Where feasible, permanent structures (towers/poles) will be placed outside of wetland areas. The construction workspace will be reduced to the extent practicable to minimize wetland disturbances. Temporary construction roads will be positioned within the construction right-of-way to avoid wetlands. Where avoidance is unfeasible, mitigation measures will be used including timber matting. Waterways: All surface waters will be spanned via OH transmission lines and structures will be placed above the ordinary high-water mark. Temporary construction mat bridges & culverts will be used to cross smaller streams where equipment travel is needed. Larger streams will not be spanned by temporary equipment bridges. Structures will be sited outside flood zones where feasible. Multiple larger waterways will be crossed by this route including the Scioto River, the Olentangy River, and Big Walnut Creek. Forest and Riparian Habitat: Per desktop review, this route crossed ~6.7 miles of forested land. The Project will adhere to applicable bat and bird TOYR for tree clearing activities. Terrestrial Wildlife: No significant impacts are anticipated by construction of the route; activities will avoid critical breeding or migration periods in accordance with permits. Sensitive Species: The Project will consult with Ohio DNR and U.S. Fish and Wildlife Service to identify sensitive species that may occur in the route area. No critical habitat or designated natural areas are expected to be impacted. Farmland and Easements: The Project will coordinate with landowners and agencies to minimize impacts on Ag land and conservation easements. No agricultural easements are crossed by this route. Cultural Resources: The route is not within 1,000 feet of any mapped National Register of Historic Places. The Project will complete Phase I cultural surveys. Recreational Areas: This route crosses a recreational trail south of Highway 36. Only minor, short-term impacts to trail use are anticipated while the line is strung across the trail. Federal and State Land: No federal or state owned land is crossed by the route.

Nominal voltage	765	
Line construction type	Overhead	
General route description	A 20.2 mile circuit that travels generally north - south. The route is primarily through farm fields. Roughly 18% of this circuit follows existing transmission ROW.	
Terrain description	The terrain throughout the route is generally flat farm fields.	
Right-of-way width by segment	The entire circuit will be new 200-ft wide ROW.	
Electrical transmission infrastructure crossings	Overhead Crossing - 69kV OH Line, Overhead Crossing - Two 138kV OH Lines	
Civil infrastructure/major waterway facility crossing plan	Guyed Structured. Single monopole per phase - PI & Dead Ends"	

Environmental impacts	The Marysville to Resaca route was designed to minimize impacts on physical and environmental resources by using overhead (OH) transmission, positioning structures and spans to avoid direct resource impacts where feasible, and routing within predominantly agricultural land. Specific physical and environmental considerations that were evaluated to minimize resource impacts include: Wetlands: Where feasible, permanent structures (i.e. transmission towers/poles) will be placed outside of wetland areas. The construction workspace will be reduced to the extent practicable to minimize wetland disturbances. Temporary construction roads will be positioned within the construction right-of-way to avoid wetlands to the extent practicable and wetland/timber matting will be used where needed. Waterways: All surface waters will be spanned via OH transmission lines and structures will be placed above the ordinary high-water mark. Temporary construction mat bridges & culverts will be used to cross smaller streams where equipment travel is needed. Larger streams will not be spanned by temporary equipment bridges. Structures will be sited outside flood zones where feasible. Forest and Riparian Habitat: Per desktop review, this route crosses 2.9 miles of forested land. The Project will adhere to applicable bat and migratory bird TOYR for tree clearing activities. Terrestrial Wildlife: No significant impacts are anticipated by construction of the route; activities will avoid critical breeding or migration periods in accordance with permit. Sensitive Species: The Project will consult with Ohio DNR and U.S. Fish and Wildlife Service to identify sensitive species that may occur in the route area. No critical habitat or designated natural areas are expected to be impacted. Farmland/Conservation Easements: The Project will coordinate with landowners and agencies to minimize impacts on Ag land and conservation easements. No agricultural easements are crossed by this route. Cultural: The proposed route is 800 ft southwest of the historic Bigelow Covered Bridge. The Project will ensure that appropriate procedures/visual impact analysis occur per permit requirements and the bridge is protected during construction as appropriate. The Project will complete Phase I cultural surveys for this route. Federal and State Land: No federal or state owned land is crossed by the route.

Greenfield Substation Component	
Component title	345kV Madison Yard Greenfield Station
Project description	Confidential
Substation name	345 kV Madison Yard
Substation description	Engineer and construct a new 345 kV substation consisting of nine (9) 345 kV dead tank circuit breaker, twenty-one (21) 345 kV disconnect switches, one (1) control house, and associated 345 kV bus and hardware.
Nominal voltage	AC
Nominal voltage	345
Transformer Information	
None	
Major equipment description	345 kV dead tank circuit breakers, disconnect switches, and one control house
	Normal ratings Emergency ratings
Summer (MVA)	
Winter (MVA)	

Environmental assessment	The New 345 kV Madison Yard will be sited in agricultural land adjacent to an existing substation. No effects on forested/wooded areas, wetlands, waterbodies, flood zones, sensitive species habitat, or recreational uses are anticipated based on the Project's initial desktop reviews and diligence. Phase I cultural surveys will be completed and consultations will occur with the State Historic Preservation Office regarding survey findings. The Project team will also coordinate with state, county, and local agencies to obtain any necessary zoning, stormwater, erosion and sediment control authorizations, and comply with setback requirements that may apply to the Project. The Project will design construction and post-construction erosion and sediment control and stormwater management plans for agency review and approval.

Greenfield Substation Component	
Component title	765kV Fostoria Yard Greenfield Station

Project description	Confidential				
Substation name	765 kV Fostoria Central Yard				
Substation description	Engineer and construct a new substation consisting of one (1) 345 kV dead tank circuit breaker, two (2) three (3) phase 345 kV disconnect switches, four (4) single phase 345 kV disconnect switches, one (1) 765 kV dead tank circuit breaker, ten (10) single phase 765 kV disconnect switches, four (4) single phase 765/345 kV transformers (750/833 MVA each, total of 2250/2500 MVA), one (1) control house, and associated 345 & 765 kV bus and hardware.				
Nominal voltage	AC				
Nominal voltage	765				
Transformer Information					
	Name	Capacity (MVA)			
Transformer	T1	2500			
	High Side	Low Side	Tertiary		
Voltage (kV)	765	345	13.8		
Major equipment description	765 kV dead tank circuit breaker, 345 kV dead tank circuit breaker, 765 kV disconnect switch, 345 kV disconnect switches, and a control house.				
	Normal ratings	Emergency ratings			
Summer (MVA)					
Winter (MVA)					

Environmental assessment	The New 765kV Fostoria Central Yard will be sited in agricultural land adjacent to an existing substation. No effects on forested/wooded areas, wetlands, waterbodies, flood zones, sensitive species habitat, or recreational uses are anticipated based on the Project's initial desktop reviews and diligence. Phase I cultural surveys will be completed and consultations will occur with the State Historic Preservation Office regarding survey findings. The Project team will also coordinate with state, county, and local agencies to obtain any necessary zoning, stormwater, erosion and sediment control authorizations, and comply with setback requirements that may apply to the Project. The Project will design construction and post-construction erosion and sediment control and stormwater management plans for agency review and approval.
Outreach plan	Refer to land acquisition plan reference as part of this proposal.

Substation Upgrade Component	
Component title	345kV Greene Station Upgrade

Project description	Confidential
Substation name	Greene
Substation zone	Dayton
Substation upgrade scope	Create a new 345 kV position in the Greene Substation by engineering and constructing one (1) new 345 kV dead tank circuit breaker, three (3) 345 kV disconnect switches, 345 kV string bus, associated 345 kV bus and hardware, and shifting two (2) existing transmission lines in order to install the new transmission line on the Western section of the substation.

Transformer Information

None	
New equipment description	345 kV dead tank circuit breakers and disconnect switches
Substation assumptions	The Greene Substation is currently arranged in a six (6) breaker ring bus. There is space within the boundaries of the existing substation to install a new 345 kV dead tank breaker and associated disconnect switches. We assumed there is adequate space in the existing controls room to accommodate the new protection and control and instruments needed to support this solution.
Real-estate description	Refer to land acquisition plan included as part of this proposal.

Substation Upgrade Component	
Component title	345kV Madison Station Upgrade
Project description	Confidential
Substation name	Madison Station
Substation zone	
Substation upgrade scope	Extend the two (2) main buses of the 345 kV yard via a string bus between the existing Madison Substation and the new substation to the South.
Transformer Information	
None	
New equipment description	No major equipment will be needed to support this solution.
Substation assumptions	Madison Substation is arranged in a breaker and half scheme, this solution the two (2) main 345 kV buses can be extended to the new substation where a bus section breaker will be used to connect and to protect both stations.

Substation Upgrade Component	
Component title	345/138kV Melissa Station Upgrade
Project description	Confidential
Substation name	Melissa
Substation zone	ATSI
Substation upgrade scope	This solution assumes the Melissa 138 kV Substation has completed its construction and accept two (2) additional line positions from an expanded 345 kV Substation. The 345 kV substation will be arranged as a four (4) breaker ring bus, with four (4) 345 kV dead tank breakers, twelve (12) 345 kV disconnect switches, two (2) 345/138 transformer (rated for 750 MVA), one (1) control house, and associated 345 kV bus and hardware.
Transformer Information	
None	
New equipment description	345 kV dead tank breakers, disconnect switches, 345/138 kV transformers, and one (1) control house.
Substation assumptions	This solution assumes the Melissa 138 kV Substation will be completed on schedule.

Substation Upgrade Component	
Component title	765kV Marysville Station Upgrade
Project description	Confidential
Substation name	Marysville
Substation zone	AEP
Substation upgrade scope	Create three (3) new 765 kV position in the Marysville Station by engineering and constructing an extension of the 765 kV substation consisting of seven (7) 765 kV circuit breakers (21 single pole breakers), three (3) 765 kV transmission lines, fifty-one (51) single phase 765 kV disconnect switches, one (1) control house, and associated 765 kV bus and hardware. The expansion of the Marysville Station will also require extending both 765 kV main buses via two (2) new 765 kV string bus.
Transformer Information	

None

New equipment description	765 kV dead tank breakers, disconnect switches, and a control house
Substation assumptions	The Marysville Station is arranged in a two (2) bay breaker and half scheme. Due to limited space to the South West on the existing station, this solution proposes expanding the station approximately 1200 feet South West of the existing station.

Substation Upgrade Component	
Component title	345kV Fostoria Central Station Upgrade
Project description	Confidential
Substation name	Fostoria Central

Substation zone	AEP
Substation upgrade scope	Create a new 345 kV position in the Fostoria Central Substation by engineering and constructing one (1) new 345 kV dead tank circuit breaker, two (2) 345 kV disconnect switches, 345 kV string bus, associated 345 kV bus and hardware.
Transformer Information	
None	
New equipment description	345 kV dead tank breaker and disconnect switches
Substation assumptions	Fostoria Central Station is arranged as a five (5) breaker ring bus arrangement, consisting of four (4) 345 kV transmission lines and one (1) 345/138 kV XFMR position. There is space in the existing substation to add a new 345 kV position to support this solution.

Substation Upgrade Component

Component title	765kV Vassell Station Upgrade
Project description	Confidential
Substation name	Vassell
Substation zone	AEP
Substation upgrade scope	Create a new 765 kV position in the Vassel Substation by engineering and constructing two (2) new 765 kV dead tank circuit breaker, fifteen (15) single phase 765 kV disconnect switches, associated 765 kV bus and hardware.

Transformer Information

None	
New equipment description	765 kV dead tank circuit breakers and disconnect switches
Substation assumptions	The Vassel Station is arranged in double bus double breaker scheme, this solution proposes installing two (2) additional breakers to create a new position within the boundaries of the existing fence.

Transmission Line Upgrade Component		
Component title	345kV Transmission Line Upgrades from Existing 345kV Greene Station to New 345kV Greenfield Transmission Line	
Project description	Confidential	
Impacted transmission line		
Point A	Greene 345kV Station	
Point B	New Madison 345kV Yard	
Point C		
Terrain description	Soft rolling hills through a wooded area with a meandering river.	
Existing Line Physical Characteristics		
Operating voltage	345	
Conductor size and type	Two (2) 954 kcmil ACSR "Cardinal" conductors per phase	
Hardware plan description	New hardware will be needed, as the targeted crossarms on the existing towers do not have hardware mounted on them.	
Tower line characteristics	Age and condition will need to be provided/verified by incumbent.	
Proposed Line Characteristics		
	Designed	Operating
Voltage (kV)	345.000000	345.000000

	Normal ratings	Emergency ratings
Summer (MVA)	1494.000000	1872.000000
Winter (MVA)	1689.000000	2074.000000
Conductor size and type	Two (2) 954 kcmil ACSR "Cardinal" conductors per phase	
Shield wire size and type	not there currently	
Rebuild line length	5.4 Miles	
Rebuild portion description	5.4 miles of OH 345kV circuit shall be conducted, utilizing existing towers. It is assumed that the existing towers' crossarms are structurally capable to support the specified two conductors per phase, as the opposing crossarms also have two conductors per phase. It is also assumed that the existing towers are in adequate condition to support the new circuit.	
Right of way	It is assumed that all work will be completed within existing ROW. We do not believe the ROW will need expansion, nor will any new ROWs be necessary. The incumbent may utilize a temporary construction easement if they deem it is required.

New Flowgates

Confidential

Financial Information

Capital spend start date	06/2026
Construction start date	10/2028
Project Duration (In Months)	69

Cost Containment Commitment

Cost cap (in current year)	Confidential
Cost cap (in-service year)	Confidential

Components covered by cost containment

1. 345kV Greenfield Transmission Line from 345kV Transmission Line Upgrades to New 345kV Madison Yard Greenfield Station - Proposer
2. 345kV Greenfield Transmission Line (Double Circuit) from 345kV Madison Yard Greenfield Station to Existing 138kV Melissa Station - Proposer
3. 345kV Greenfield Transmission Line from 345kV Madison Yard Greenfield Station to 765/345kV New Greenfield Station - Proposer
4. 765kV Greenfield Transmission Line from Existing 765kV Marysville Station to New 765kV Fostoria Yard Greenfield Station - Proposer
5. 765kV Greenfield Transmission Line from Existing 765kV Marysville Station to Existing 765kV Vassell Stations - Proposer
6. 765kV Greenfield Transmission Line from Marysville Station to 765/345kV Greenfield Station - Proposer
7. 345kV Madison Yard Greenfield Station - Proposer
8. 765/345kV New Greenfield Station - Proposer
9. 765kV Fostoria Yard Greenfield Station - Proposer

Cost elements covered by cost containment

Engineering & design	Yes
Permitting / routing / siting	Yes
ROW / land acquisition	Yes
Materials & equipment	Yes

Construction & commissioning	Yes
Construction management	Yes
Overheads & miscellaneous costs	Yes
Taxes	No
AFUDC	No
Escalation	Yes
Additional Information	Confidential
Is the proposer offering a binding cap on ROE?	Yes
Would this ROE cap apply to the determination of AFUDC?	Yes
Would the proposer seek to increase the proposed ROE if FERC finds that a higher ROE would not be unreasonable?	No
Is the proposer offering a Debt to Equity Ratio cap?	Confidential
Additional cost containment measures not covered above	Confidential

Additional Comments

None
