Under-forecasting
Daily Peak Forecast Error (October)

- Error at Peak Hour
- Weekend / Holiday

Over-forecasting
Under-forecasting
PJM’s BAAL performance has exceeded the goal of 99% for each month in 2022.
• Two Spinning Events

• The following Emergency Procedures occurred:
  – 1 Hot Weather Alerts
  – 1 Geomagnetic Disturbance Warning
  – 13 Post-Contingency Local Load Relief Warnings (PCLLRW)
• One Spinning Event
• One Shared Reserve Event

• The following Emergency Procedures occurred:
  – 1 Emergency Load Management Reduction Action
  – 1 NERC EEA Level 2
  – 10 Post-Contingency Local Load Relief Warnings (PCLLRW)
Shortage Case Approvals

• 1 Shortage Case Approved

• The approved Shortage Case occurred on:
  – 10/12/22:
    – 1 Shortage Case for 14:10 interval
    – Due to load increase
The 13-month average forced outage rate is 4.63% or 9,267 MW. The 13-month average total outage rate is 17.61% or 35,332 MW.
2021-2022 Planned Emergency, Unplanned, and Total Outages by Ticket

Note: “Unplanned Outages” include tripped facilities. One tripping event may involve multiple facilities.
PCLLRW Count Vs. Peak Load – Daily Values For 3 Months
### Spin Response (September)

*Tier 2 Response is equal to Tier 2 Assigned for events with duration less than ten minutes*

#### Tier 1 Response

Appendix
Goal Measurement: Balancing Authority ACE Limit (BAAL)

- The purpose of the new BAAL standard is to maintain interconnection frequency within a predefined frequency profile under all conditions (normal and abnormal), to prevent frequency-related instability, unplanned tripping of load or generation, or uncontrolled separation or cascading outages that adversely impact the reliability of the interconnection. NERC requires each balancing authority demonstrate real-time monitoring of ACE and interconnection frequency against associated limits and shall balance its resources and demands in real time so that its Reporting ACE does not exceed the BAAL (BAAL_{LOW} or BAAL_{HIGH}) for a continuous time period greater than 30 minutes for each event.

- PJM directly measures the total number of BAAL excursions in minutes compared to the total number of minutes within a month. PJM has set a target value for this performance goal at 99% on a daily and monthly basis. In addition, current NERC rules limit the recovery period to no more than 30 minutes for a single event.
The 13-month average forced outage rate is 4.63% or 9,267 MW.
The 13-month average total outage rate is 17.61% or 35,332 MW.
