**Current Revision**..........................................................11

## Section 1: Introduction .....................................................12

1.1 About PJM Manuals ..........................................................12
1.2 How to Use This Manual ..................................................12
1.3 The intended audiences for this Manual: ................................12
1.4 What is in this Manual? ....................................................12
1.5 Cost Development Subcommittee Mission ................................12
1.6 Purpose of this Manual ....................................................13
  1.6.1 Reason for Cost Based Offers: Market Power Mitigation ....13
1.7 Components of Cost .......................................................13
  1.7.1 Generator offer curves ................................................14
  1.7.2 Start-up Cost ..........................................................14
  1.7.3 No Load Cost ..........................................................14
  1.7.4 Incremental Cost ......................................................14
  1.7.5 Total Production Cost ................................................15
1.8 Cost Methodology and Approval Process ................................15
1.9 References ..................................................................15

## Section 2: Policies for All Unit Types .....................................17

2.1 Heat Input and Rates ..........................................................17
  2.1.1 Heat Input and Rate Policy ..........................................17
2.2 Performance Factors ........................................................18
  2.2.1 Engineering Judgment in Performance Factors ..................18
  2.2.2 Higher Heating Value of Fuel ......................................18
  2.2.3 Calculation Methods of Performance Factors ..................19
  2.2.4 ‘Like’ Units for Performance Factors .............................19
2.3 Fuel Cost Policies and Guidelines ........................................19
  2.3.1 Submission of and/or Modifications to Fuel Cost Policies ....20
    2.3.1.1 Annual Review ...................................................20
    2.3.1.2 Outside Annual Review/New Resource ......................20
    2.3.1.3 Revocation .......................................................22
  2.3.2 Fuel Cost Calculation ..................................................22
  2.3.3 Total Fuel Related Costs ............................................23
  2.3.4 Types of Fuel Costs ....................................................23
  2.3.5 Emission Allowances ...................................................23

Revision: 30, Effective Date: 12/04/2018  PJM © 2018
2.3.6 Leased Fuel Transportation Equipment .............................................. 24
2.3.7 Engineering Judgement in Fuel Cost Calculations ............................... 24
2.4 Start-up Cost ...................................................................................... 25
  2.4.1 Start-up Cost Definitions ............................................................... 25
  2.4.2 Engineering Judgment in Start Costs ............................................. 25
2.5 No Load ............................................................................................. 25
  2.5.1 No-Load Definitions ..................................................................... 25
  2.5.2 No-Load Fuel .............................................................................. 25
  2.5.3 No Load Calculation .................................................................... 26
2.6 Variable Maintenance Cost .................................................................. 26
  2.6.1 Escalation Index .......................................................................... 27
  2.6.2 Maintenance Period ..................................................................... 28
  2.6.3 Incremental Adjustment Parameter .............................................. 29
  2.6.4 Equivalent Hourly Maintenance Cost ........................................... 29
  2.6.5 Immature Units: Maintenance Costs ............................................ 30
2.7 Synchronized Reserve ......................................................................... 31
2.8 Regulation Service ............................................................................. 32

Section 3: Nuclear Unit Cost Guidelines .................................................. 37
  3.1 Nuclear Heat Rate ........................................................................... 37
  3.2 Performance Factor .......................................................................... 37
  3.3 Fuel Cost ......................................................................................... 37
    3.3.1 Basic Nuclear Fuel Cost ............................................................... 37
    3.3.2 Total Fuel-Related Costs for Nuclear Units ......................... 37
  3.4 Start-up Costs ................................................................................... 37
    3.4.1 Hot Start-up Cost ................................................................. 38
    3.4.2 Intermediate Start-up Cost ...................................................... 38
    3.4.3 Cold Start-up Cost ............................................................. 38
    3.4.4 Additional Components Applied to Hot, Intermediate and Cold Start-up Costs ................................................................. 38
  3.5 No-Load Cost .................................................................................. 39
  3.6 Maintenance Cost ............................................................................ 39
    3.6.1 Configuration Addition Maintenance Adder .......................... 39
    3.6.2 Calculation of the Configuration Addition Maintenance Adder: 40
    3.6.3 Reductions in Total Maintenance Costs ....................................... 41
  3.7 Synchronized Reserve Cost ............................................................. 42
  3.8 Regulation Cost .............................................................................. 42

Section 4: Fossil Steam Unit Cost Development ..................................... 43
  4.1 Heat Rate ......................................................................................... 43
  4.2 Performance Factor .......................................................................... 43
  4.3 Fuel Cost ....................................................................................... 43
    4.3.1 Total Fuel Related Cost ............................................................ 43

Section 12: Energy Market Opportunity Cost and Non-Regulatory
Opportunity Cost Guidelines ............................................................................................... 72
12.1 Opportunity Cost Policy ............................................................................................... 72
12.2 Basis for Opportunity Cost to be included in Cost Offers ........................................... 72
12.2.1 Energy Market Opportunity Costs ................................................................. 72
12.2.2 Non-Regulatory Opportunity Cost: Physical Equipment Limitations: ........ 72
12.2.3 Non-Regulatory Opportunity Cost: Fuel Limitations ................................. 72
12.3 Calculation Method Options: Two Methodologies for calculating Opportunity Cost.. 73
  12.3.1 Long Term Method (greater than 30 days) ............................................. 73
  12.3.2 Short Term Method (30 days or less) ....................................................... 73
12.4 Definitions ........................................................................................................... 73
12.5 Long Term Methodology .................................................................................. 74
  12.5.1 Step 1: Derive Historical Monthly LMP Basis Differential between the
generation bus and western hub.............................................................................. 74
  12.5.2 Step 2: Derive hourly volatility scalars to incorporate hourly volatility into
the LMP forecast..................................................................................................... 77
  12.5.3 Step 3: Create three sets of hourly forecasted bus values ....................... 78
  12.5.4 Step 4: Create a daily fuel volatility scalar ............................................. 79
  12.5.5 Step 5: Create three daily delivered fuel forecasts ................................. 80
  12.5.6 Step 6: Create generating unit(s) cost for each of the three forecasts .... 81
.......................................................................................................................... 83
  12.5.7 Step 7: Calculate the margin for every hour in the three hourly forecasts... 83
  12.5.8 Step 8: Determine the opportunity cost component ............................. 84
12.6 Short Term Methodology .................................................................................. 85
  12.6.1 Step 1: Derive Historical Monthly LMP Basis Differential between the
generation bus and western hub.............................................................................. 85
  12.6.2 Step 2: Derive hourly volatility scalars to incorporate hourly volatility into
the LMP forecast..................................................................................................... 88
  12.6.3 Step 3: Create three sets of hourly forecasted bus values ....................... 89
  12.6.4 Step 4: Fuel Price ..................................................................................... 90
  12.6.5 Step 5: Create generating unit’s cost for each of the three forecasts .... 91
  12.6.6 Step 6: Calculate the margin for every hour in the three hourly forecasts... 92
  12.6.7 Step 7: Determine the opportunity cost adder ...................................... 94

Attachment A: Applicable FERC System of Accounts........................................ 95
  A.1 Balance Sheet Accounts ............................................................................... 95
    A.1.1 FERC FORM 1 ACCOUNT 151: Fuel Stock (Major only) ..................... 95
  A.2 Expense Accounts ....................................................................................... 95
    A.2.1 FERC FORM 1 ACCOUNT 501: Fuel ..................................................... 95

Approval

Approval Date: 12/05/2018
Effective Date: 12/04/2018
Glen Boyle, Chairman
Cost Development Subcommittee
Revision 31 (12/03/2019):

- FERC Order 841 Implementation
This section contains information for the development of battery and flywheel Energy Storage Resource cost offers. Regulation only resources should see Section 11.8.

Battery – device to store electrical energy via chemicals.
Flywheel – mechanical device for storing rotational energy.

### 11.1 Heat Rates Efficiency factor

Efficiency factor is a battery or flywheel version of a heat rate. Energy Storage Resources do not burn fuel so heat rates are not applicable. Efficiency factors measure the ratio of generation produced to the amount of electricity used to charge.

\[
\text{Efficiency factor} = \frac{\text{MWh Discharged}}{\text{MWh Charged}}
\]

Efficiency factors can be calculated over the time period specified by the Market Seller in the Fuel Cost Policy. A Market Seller must make the choice of method in their fuel cost policy and cannot change to another method for a period specified in Section 2.1.

### 11.2 Performance Factors

**Note:**
The information in Section 2.2 contains basic Performance Factor information relevant for all unit types. The following additional information only pertains to Energy Storage Resources, battery and flywheel.

Energy Storage Resources, battery and flywheel, do not burn fuel so Performance Factors are equal to 1.0.

### 11.3 Fuel Cost

**Note:**
The information in Section 2.3 contains basic Fuel Cost information relevant for all unit types. The following additional information only pertains to Energy Storage Resources, battery and flywheel.

Energy Storage Resource’s fuel costs are equal to zero.
11.3.1 Total Fuel Cost

Market Sellers for batteries and flywheels must identify in their Fuel Cost Policies the methodology they are using to calculate fuel cost (charging cost).

**Total Energy Input Related Costs for Battery/Flywheel**

\[
\text{Total Fuel Cost} \left( \frac{\$}{\text{MWh}} \right) = \left( \text{average charging cost} \left( \frac{\$}{\text{MWh}} \right) \times \text{efficiency factor} \right) + \text{maintenance adder}
\]

11.3.2 Operating Costs

Operating Costs may include, but are not limited to: acids and lithium ion replacement.

11.4 Start-up Cost

Energy Storage Resource’s Battery/flywheel’s Start Fuel and Total Fuel Related Costs are equal to zero.

11.5 No-Load Cost

Energy Storage Resources Batteries and flywheels no-load cost shall be equal to zero do not have No-load costs.

11.6 Maintenance

**Note:**
The information in Section 2.6 contains basic Maintenance Cost information relevant for all unit types. The following additional information only pertains to Energy Storage Resources.

Batteries and flywheels cannot include costs that can be include in their capacity offer such as straight time labor. Maintenance costs for batteries and flywheels may include, but are not limited to: cell repairs/replacements, inverter maintenance, and generation owned GSU/ Interconnection Transmission maintenance.

11.7 Synchronized Reserve Cost

**Note:**
The information in Section 2.7 contains basic Synchronized Reserve Cost information relevant for all unit types. The following additional information only pertains to Energy Storage Resources if applicable.

The cost to provide synchronous reserves from battery or flywheel resources shall be equal to the margin up of $7.50 per MWh of reserves offered plus the maintenance adder.
11.8 Regulation Cost

Note: The information in Section 2.8 contains basic Regulation Cost information relevant for all unit types. The following additional information only pertains to Energy Storage Resources.

Energy Storage Resources shall calculate Energy Storage Unit Losses in accordance with the equation below. The “Cost Increase due to Heat Rate Increase during non-steady state operation” and the “Fuel Cost Increase and Unit Specific Heat Rate Degradation due to Operating at lower loads” shall be equal to zero.

If a Market Seller wishes to change its method of calculating these losses, the Market Seller shall submit a request to change its Fuel Cost Policy to PJM and the MMU pursuant to Section 2.3.1. The approved method of calculation may be implemented upon approval and may be updated no more frequently than once every 12 months. If any action by a government or regulatory agency that results in a need for the Market Seller to change its method of cost calculation, the affected Market Seller may submit a request, or notification as appropriate, to PJM and the MMU for evaluation, pursuant to Section 2.3.1.

**Energy Storage Unit Losses ($/MW)** – shall be the calculated average of seven (7) days of rolling hourly periods where the real time bus LMP ($/MWh) at the plant node is multiplied by the net energy consumed (MWh) when regulating divided by the regulation offer (MW). The seven (7) days of rolling hourly periods shall consist of the unit’s last 168 hour periods with accepted regulation offers. The following equation governs energy storage unit’s fuel cost increase:

\[
\text{Energy Storage Unit Losses (}$/\text{MW}) = \text{Average of 7 Days}\left\{ \frac{\text{Hourly LMP}}{\text{Hourly Accepted Regulation Offers (MW)}} \times \frac{\text{Hourly Net Energy Consumed (MWh)}}{\text{MWh}} \right\}
\]

11.9 **Opportunity Cost for Energy Storage Resources Operating in the Energy Market**

- TBD
