The purpose of this project is to align the defined terms found in the NERC Glossary of Terms Used in Reliability Standards (Glossary) and the Rules of Procedure (ROP). The SDT identified all existing defined terms that are contained in both the Glossary and the ROP (“cross-over terms”). Currently there are fifty-five (55) cross-over terms. Of the fifty-five (55) cross-over terms, forty (40) contain inconsistencies or differences in the definition narratives, which causes industry confusion and may lead to inconsistent interpretation or application of the meaning of a term. To achieve this consistency, the SDT is proposing alignment revisions to twenty-six (26) Glossary terms and sixteen (16) ROP terms.

Additionally, once the definition revisions are made, the SDT will also develop recommendations regarding how to enhance the current definition development to prevent misalignment or inconsistencies during future development of defined terms.
### NERC Standards Under Development

Addresses FERC Order 808 directive to modify COM-001-2 or develop a new standard to address “internal communications capabilities that could involve the issuance or receipt of Operating Instructions or other communications that could have an impact on reliability.”

FERC Order 808 Directive Ask:
1. Address adequacy of internal communications that may have an adverse effect on reliability, even within a single functional entity. Such communications may include:
   i. Communications between geographically separate control centers within same functional entity
   ii. Communications between a control center and field personnel

Standard Authorization Request (SAR) posted for comment. Project proposes to either revise COM-001-2 or develop a new standard.
## Project 2014-01 Standards Applicability for Dispersed Generation Resources White Paper

Reviews applicability section of certain Reliability Standards or requirements that apply to GO/GOP and where appropriate revises to recognize the unique technical and reliability aspects of dispersed generation to ensure consistent applicability of standards.

Draft White Paper posted for comment. Revisions include:

1. FAC-008 Facility Ratings: SDT added additional technical guidance on identifying the Facility rating of a dispersed power producing resource.
2. Added discussion and diagrams to provide explanation of how to identify the most limiting component of a facility for solar (Figure A) and wind (Figure B) dispersed power producing resources.
3. Some minor wording changes throughout the white paper.

NERC Standards Subject to Future Enforcement

- **July 1, 2015**
  - MOD-032-1 R1 - Data for Power System Modeling and Analysis

- **October 1, 2015**
  - CIP-014-1 - Physical Security
  - COM-001-2 - Communications
  - PRC-006-2 - Automatic Underfrequency Load Shedding

- **January 1, 2016**
  - FAC-001-2 - Facility Interconnection Requirements
  - FAC-002-2 - Facility Interconnection Studies
  - NUC-001-3 - Nuclear Plant Interface Coordination

- **April 1, 2016**
  - PRC-005-3 - Protection System and Automatic Reclosing Maintenance
NERC Standards Subject to Future Enforcement

➢ July 1, 2016
  • BAL-001-2 - Real Power Balancing Control Performance
  • COM-002-4 - Operating Personnel Communications Protocols
  • MOD-025-2 - Verification and Data Reporting of Generator Real and Reactive Power Capability and Synchronous Condenser Reactive Power Capability
  • MOD-031-1 - Demand and Energy Data
  • MOD-032-1 - R2-R4: Data for Power System Modeling and Analysis
  • PER-005-2 - Operations Personnel Training
  • PRC-019-1 - Coordination of Generating Unit or Plant Capabilities, Voltage Regulating Controls, and Protection
  • PRC-024-1 - Generator Frequency and Voltage Protective Relay Settings

➢ July 1, 2017
  • MOD-033-1 - Steady-State and Dynamic System Model Validation
