Update on RAAS Activities

Tom Falin
Resource Adequacy Planning
Planning Committee
March 10, 2016
• Develop assumptions for the 2016 Reliability Requirement Study (RRS)
• Two education sessions were held in late 2015
• RAAS meetings were scheduled for:
  – January 26
  – February 23
  – March 24
  – April 21
Topics Discussed at Jan. 26 RAAS Meeting

- Impact of modeling DR in RRS
- Load Model Selection Process
- World Modeling (Capacity Benefit of Ties, CBOT)
Topics Discussed at Feb. 23 Meeting

- Follow-up from previous meeting
- Discussion of Southwest Power Pool (SPP) Reserve Margin
- Explanation of Capacity Benefit Margin (CBM)
- PJM Capacity Model
  - Ambient Derating of 2,500 MW
  - New approach to determine the appropriate deration amount by examining temperature adjustments reported through the summer verification tests
Topics for Future RAAS Meetings

- Follow-up to items from previous meetings
- Develop study assumptions recommendations for the PC
- Target is to finalize the study assumptions in the next two RAAS meetings and to send a recommendation to the PC in the April/May time frame
