PECO Transmission Planning Criteria Changes for 2016
PECO transmission planning criteria changes:

✓ PECO’s criteria meets or exceeds NERC and PJM requirements

✓ Enhanced the criteria applied to the 69 kV system to align more closely with the criteria applied to BES

✓ Eliminated the provision to allow one nuclear unit to be re-dispatched to alleviate a potential N-1-1 violation

✓ Eliminated special voltage and thermal limits applied to 138 kV facilities for N-1-1 events

✓ Eliminated a special high voltage limit on the Peach Bottom 500 kV bus not needed after substation enhancement completed

✓ Re-classified the high side connections of 230-69 kV and 138-69 kV transformers as BES components
