New Service Request Cost Allocation

Aaron Berner
Manager, Interconnection Analysis
September 16, 2016
• Studies intended to be evaluated in coordinated queue
  – Customers are evaluated together and in sequential order for each queue

• Cost Allocation rules cause divergence in process for some studies
  – Transmission Service customers are not allowed to share costs with other customers in the queue
Queue Study Process

• Applicability
  – Generation or Merchant Transmission
  – Transmission Service
  – Upgrade Requests (IARRs)

• Upgrades
  – Determined based on coordinated single queue
• Change Tariff language to require cost allocation to occur for all projects

• Change Manual language to require cost allocation to occur for all projects

• Continue to require that all projects pay for costs associated with the upgrades needed to support the level of service they are requesting (no change required for this)
• Discuss any questions about moving forward with changes as outlined in the posted materials
  – Next step would be to take materials to the PC for discussion / endorsement (Tariff language to be inserted into Tariff page format)
