Queue Process Challenges

<$5M Queue Cost Allocation & Alternate Queue

Aaron Berner
Manager, Interconnection Analysis
Planning Committee
May 4, 2017
The following changes were made to the Alternate queue items only – no changes to the New Services Queue Cost allocation

– Added change to Tariff TOC, and recognized the removal of Section 112C in the definition of Part IV of the Tariff
– Formatting
• Current studies performed
  – Feasibility Study
• Problems with current process
  – “Screen” criteria requires queue to be closed (6 month queue)
    • Evaluation of “screen” criteria requires load flow studies with all projects in queue modeled
• Solution
  – Remove alternate queue screening

• Remove Alternate Queue screening
  – Allow projects to be evaluated for impacts once Point of Interconnection (POI) has been established
    • Identification of impacts could proceed with known POI if all previously queued projects in vicinity of project under study are also known
• Reinforcement costs <$5 million allocated to all projects in a queue which add load to the violation defining the need for the reinforcement

• Problems with current process
  – Criteria requires queue to be closed (6 month queue)
Solution

- Evaluate need for reinforcements with first request to cause the need for a reinforcement to be allocated 100% of the cost of the upgrade
  - Subsequent projects which contribute to the need for the reinforcement would have cost allocation based on MW impacts
Next Steps

- Endorsement at May PC
- First read at MRC in May
