FERC Order No.1000

Suzanne Glatz
Director, Infrastructure Planning
Special PC Session
March 6, 2018
Objectives of FERC Order 1000:

- Provide opportunity through a competitive solicitation process for both incumbent transmission owners and non-incumbent transmission developers to propose transmission proposals.

- Ensure that transmission planning processes at the regional level consider and evaluate, on a non-discriminatory basis, possible transmission alternatives and produce a transmission plan that can meet transmission needs more efficiently or cost-effectively.
Cost Containment and overall Evaluation Process

- Special PC sessions on Cost Containment are being convened to discuss:
  
  - How PJM might evaluate cost commitment proposals, which may cap transmission construction costs or revenue requirements, in whole or in part

- The education on the competitive models, the PJM RTEP schedule, and the evaluation process are being conducted to ensure a clear understanding the overall Order 1000 competitive process to be able to effectively consider the concepts or constructs related to cost cap evaluation

- These meetings are not intended to debate the overall evaluation process, the competitive model, or the overall RTEP schedule, but to ensure common understanding by participants, in this phase of the special PC session
