Equipment Material Condition, Performance and Risk

Need Number: DOM-2020-0008 (Canceled)

Process Stage: Need Meeting 04/14/2020

Project Driver: Equipment Material Condition, Performance and Risk

Specific Assumption References:
See details on Equipment Material Condition, Performance and Risk in Dominion’s Planning Assumptions presented in December 2019

Problem Statement:
Dominion Energy has identified a need to replace approximately 160 ft of conductor at Everetts Substation on Line#2014 Earleys – Everetts to improve system performance and increase line capacity. This short segment of conductor is imposing a limit on the remaining sections of the line (existing normal summer line rating is 582 MVA).

Cancellation Statement:
Re-assessment of line/system does not show any concern.

Need Number: DOM-2020-0003

Process Stage: Solutions Meeting 05/12/2020

Proposed Solution:
Interconnect the new substation by cutting and extending Line #2137 (Poland-Shellhorn) approximately 0.5 miles to the proposed Aviator Substation. Terminate both ends into a four-breaker ring arrangement to create an Aviator-Poland line and an Aviator-Shellhorn line. Dominion’s standard high ampacity conductor (bundled 768 ACSS; normal summer rating = 1572 MVA) will be used for the line extension.

Estimated Project Cost: $22.0 M
