Background – eDART Applications

Used to verify if enough reserve MW available.

Used to verify generation will not over-exceed light load margins.

Used to schedule the output of Susquehanna River Hydroelectric Assets

Used to record and schedule:
- Generator MW Outages
- Voltage Regulator Outages
- Governor Outages
- D-Curve Adjustments
- Reactive Tests
Reactive Test Results Tickets
GO Survey

Used to capture unit data and determine critical load in system restoration plans.

(I.R.C.)
Used to verify if enough reserve MW available.
Background – eDART Applications

- Used to record and schedule non-generator transmission facility outages.
- Used by companies to submit changes to the transmission grid.
- Used to coordinate the update of system restoration plans.
- Used to view updates made to Object IDs.
- Used to record and schedule line, transformer, phase shifters, series and flow devices temperature apparent power ratings.
- Used to practice and coordinate restoration of service in PJM area after a blackout.
- Used to update facility clearing times data used in dynamic studies.

Current Status Report
15 minute snapshot of current status

Peak Status Report
Forecast of system condition for the peak of the day

Supplemental Status Report (SSR)
72 hour forecast of system condition; typically for extreme hot/cold weather conditions

Gen Checkout
Used to compare and highlight discrepancies between Market Gateway bids and Available Capacity. Brings Markets and Operations together in real-time

Used to manage PSSE mapping information for the purpose of sending and receiving info to/from NERC SDX

- Reactive Reserve Check (RRC)
- D-Curve Review (on Gen. Tickets menu for Gen users)
