Informational Postings

PJM will not post a mid-year load forecast update in 2019. The purpose of the mid-year update is to provide RPM market participants with an indication of the direction of the load forecast in advance of upcoming auctions. As PJM is currently developing a revised load forecast model, releasing an update to the current model may provide misleading information. PJM will resume mid-year load forecast updates in 2020.

PJM is requesting information from EDCs on significant load changes in your zone that PJM should consider for the 2020 load forecast along with any updates to end-use saturation and intensity data. Please also provide estimates of any significant losses of load. Information should be sent to PJM no later than September 1, 2019.
