

Additional Details on Transition Plan

Andrew Levitt
PJM CCSTF
July 16, 2020

	ELCC applicable?
2021/22 delivery year and before	Not applicable
2022/23 delivery year	Maybe—depends on FERC approval timing
2023/34 delivery year and later	Targeting applicability

Note: ELCC results impact MOPR defaults, and therefore must be published 150 days prior to running a BRA.

For any delivery year with a BRA run prior to May 31, 2023, all corresponding ELCC analysis will be developed using generic backcasts for wind and solar, with unit-specific backcasts available on an opt-in basis. The generic backcasts will be based on a small set of technology types and regions. These generic backcasts will be used for all resources that have less than 10 years of operating data, unless a member requests that PJM develop a unit-specific backcast and provides the required data in the specified format at least 90 days prior to the deadline for release of ELCC results.
