

TWIN CITIES POWER

Transmission Line Outages

Privileged and Confidential

Impact of Outages

- Transmission line outages impact both the day ahead and real time markets/prices.
- Changes in transmission line outages after the day ahead market closes can also affect uplift payments.
 - Cancellations
 - Scheduling (additions)
 - Re-scheduling

Proposal

- Twin Cities proposes charging an uplift allocation to transmission line outage deviations for changes made after the DAM closes.
- Transmission lines are physical assets (load, generation), and as such should have a physical deviation uplift allocation.
