

Update on Default MSOC Proposal: Back Cast with Historic Prices and Net CONE

Paul M. Sotkiewicz, Ph.D.

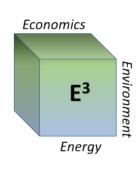

April 11, 2022

RASTF

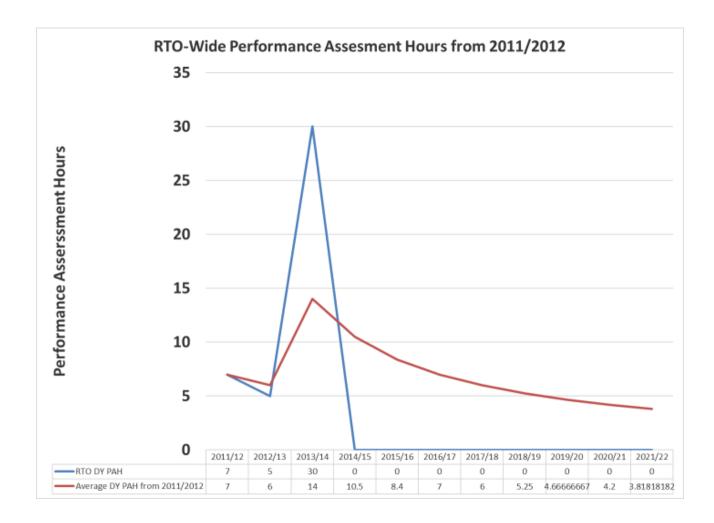

Overview and Context

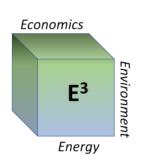

- This presentation is in response to requests for a back cast on the MSOC proposed by E-Cubed that is the variant on Net CONE*B.
- Question is to look at historic PAH/PAI, Net CONE, and Prices to see if the marginal offer may have been reviewed.
 - Note, E-Cubed does not endorse the idea that marginal offers must be reviewed.
 - But for some exceptions, the IMM has noted RPM BRA outcomes have been competitive but for a few bad actors
- Conclusion: Back cast shows that the proposed method would, in most LDAs, results in the marginal offers having been reviewed.
 - Exceptions are in EMAAC (PS) and SWMAAC (BGE & Pepco) which transmission limited, but have cleared with larger (MAAC) LDA.

RTO-Wide PAH

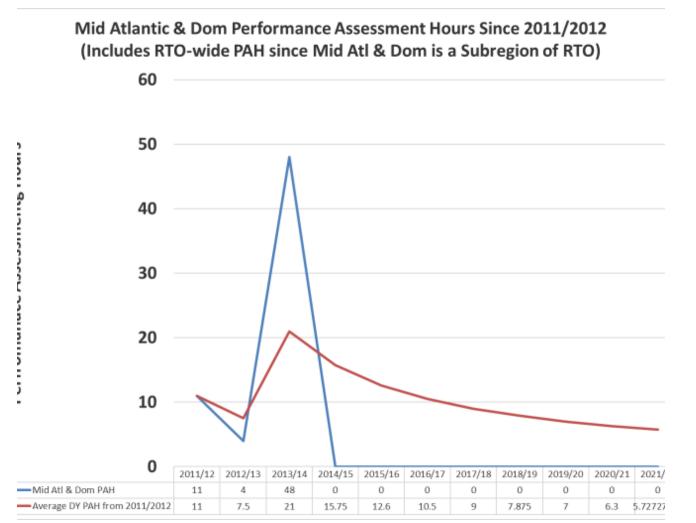

- There have been no PAH in the RTO-wide area since 2013/2014 DY.
- Through today, only 3.8 PAH on average since 2011/2012
- PAH in sub regions of RTO are additive to the RTO value.

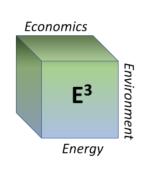

Mid-Atlantic & Dominion

- More hours in this subregion as it includes RTO-wide and PAH for Mid Atl-Dom only.
- Since 2011/2012, the current PAH is 5.72 PAH to date.
- Mid-Atl-Dom wide since 2013/2014

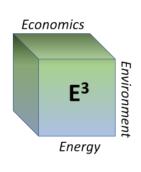

Zonal Alone PAH events on Average Since 2011/2012

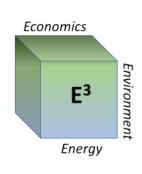

Zone	Average PAH since 2011/2012
BGE	2.454545
Pepco	1.454545
Dominion	0.6
ComEd	0.818182
AEP	2.454545
ATSI	1.909091
AE	0.818182
DLCO	0.363636

- These hours would be additive to the PAH or the wider parent LDA/zone in which the transmission zone resides.
- For example, AEP and ATSI would be added to RTO-wide, increasing the "risk" of PAH
 - AEP 2.45 + RTO 3.82 = 6.27 PAH
 - ATSI 1.91 + RTO 3.82 = 5.73 PAH
- However, BGE and Pepco are in Mid-Atl
 - BGE 2.45 + MidAtl 5.73 = 8.28 PAH

CP Price – MSOC

Positive value implies marginal offer would have been reviewed Based only on RTO or Mid-Atl & Dom values for average PAH only Zonal specific differences not shown.
