eDART Release Notes

[T] - Change for Transmission Users

[G] - Change for Generation Users

[A] - Change for All eDART Users

May 29, 2019

Inclusion of Unit Retirements in Restoration Plans Update [T]

Unit Retirement added as a reason to update the system restoration plans in eDART.

Designed to work similar to update due to cut-in transmission tickets:

- Included in Pending Restorations Plan queue.
- Option to indicate No Update Needed.
- Attachment G required for submitting updates and for no update needed.
- Email notification sent when retirement date is submitted and beginning 30 days to Next Update Request Date if pending.

See slides 27-30 of March 2019 eDART User Group Meeting.

Restoration Plan Emails Update [T]

Updates made to the emails sent out when a Cut-In Ticket is submitted and daily emails sent beginning 30 days from ticket end if the Restoration Plan update is still unresolved.

- Added language about and link to TO/TOP Matrix (https://pjm.com/library/compliance.aspx).
- Sender changed to Restoration Plan Reviewers group email address to facilitate easy reply to appropriate group.
- Subject of daily email updated to display Next Update Date instead of email date.

See slide 31 of March 2019 eDART User Group Meeting.

Retirement of Facility Data Application in eDART [T][G]

Facility Data application was used to record fault clearing times for use in the Transient Stability Analysis tool (TSA).

TSA is getting this data via other sources and the application in eDART is no longer needed.

June 26, 2019

Cut-In Ticket Enhancement [T]

Current functionality:
When a transmission ticket is marked as cut-in, a Restoration Plan Update Request is created in Update Required status. Unchecking the cut-in flag does not close the Restoration Plan Update Request.

Enhancement:
If a cut-in transmission ticket is unchecked as cut-in and nothing has been done with the Restoration Plan Update Request, eDART will set its status to Cancelled by Company.

See slide 27 of June 2019 eDART User Group Meeting.

Reactive Reserve Check (RRC) Enhancements [T]

Company Timestamp added to RRC Report and RRC Full download.

- Indicates the last time the RRC was updated from the company side either by ICCP, XML or web UI.

RRC Full download now returns the open RRC or last posted RRC if no RRC ID is selected.

- Previously returned a system error.

Refresh button removed from posted RRC reports: there is nothing to refresh on a posted report.

See slides 28-29 of June 2019 eDART User Group Meeting.

TERM Ticket Enhancements [T]

Equipment End filter added to View/Revise, History Report and Recently Restored filters.
Filter page also re-arranged to accommodate new field.

See slide 30 of June 2019 eDART User Group Meeting.

Voltage Schedules [T][G]

Fixed issue with Voltage Schedule tickets not being flagged as Late if not acknowledged by Effective Date.

See slide 6 of June 2019 eDART User Group Meeting.

Voltage Schedules Notification [T][G]

Daily emails will be sent out when the Annual Review for Voltage Schedules is in progress if acknowledgement has not been completed.

- Email sent to the same email address currently receiving notifications.
- Email text will include the posted message on the TO Annual Review and GO Annual Review pages.

Daily emails will be sent to the TO when each GO in TO's transmission zone completes all acknowledgements for the Annual Review.

Current daily email to TO now excludes Needs Schedules tickets if there is another ticket in the queue for the unit.
Notifications will only be sent for units that actually require TO action.
Likewise, Voltage Schedules button will only be red if there are units that actually require TO action and will ignore Needs Schedules tickets for units with another ticket in the queue.

See slides 31-32 of June 2019 eDART User Group Meeting.

IRC Statistical Report [G]

New report to track Generation company's response to Instantaneous Reserve Checks (IRCs) per month.

- Report also available to PJM Dispatch.
- Displays information on available capacity , total units, total reserves acknowledged, total reserves unacknowledged and score.
- Score = (Total Reserves Acknowledged / Total Reserves) x 100

See slides 23-24 of June 2019 eDART User Group Meeting.

General [A]

Updated phone number for the PJM Support Center for locked accounts.

See slide 6 of
