

Market Sellers,

Based on input from Market Sellers, further discussion with the MMU, and PJM review, PJM has determined that the updated VOM spreadsheets recently sent to all Market Sellers with immature units that used estimated, forecasted or calculated data in the calculation of their maintenance adders may not properly account for all possible calculation scenarios.

Market Sellers with immature units are encouraged to submit an updated VOM spreadsheet that removes all estimated, calculated and forecasted data and only uses actual data escalated to current year dollars to calculate their maintenance adder through a Section 1.8 exception request from Manual 15. This will ensure the Market Seller's maintenance adders for immature units are consistent with the requirements of Manual 15.

These requests will be expedited and reviewed in a timely manner by PJM and the MMU.

Market sellers are also encouraged to participate in ongoing VOM, MIC special sessions, focused on improving VOM calculations.

If you have any questions or concerns please do not hesitate to reach out to the PJM review team at [fuelcostpolicyanalysis@pjm.com](mailto:fuelcostpolicyanalysis@pjm.com).
