

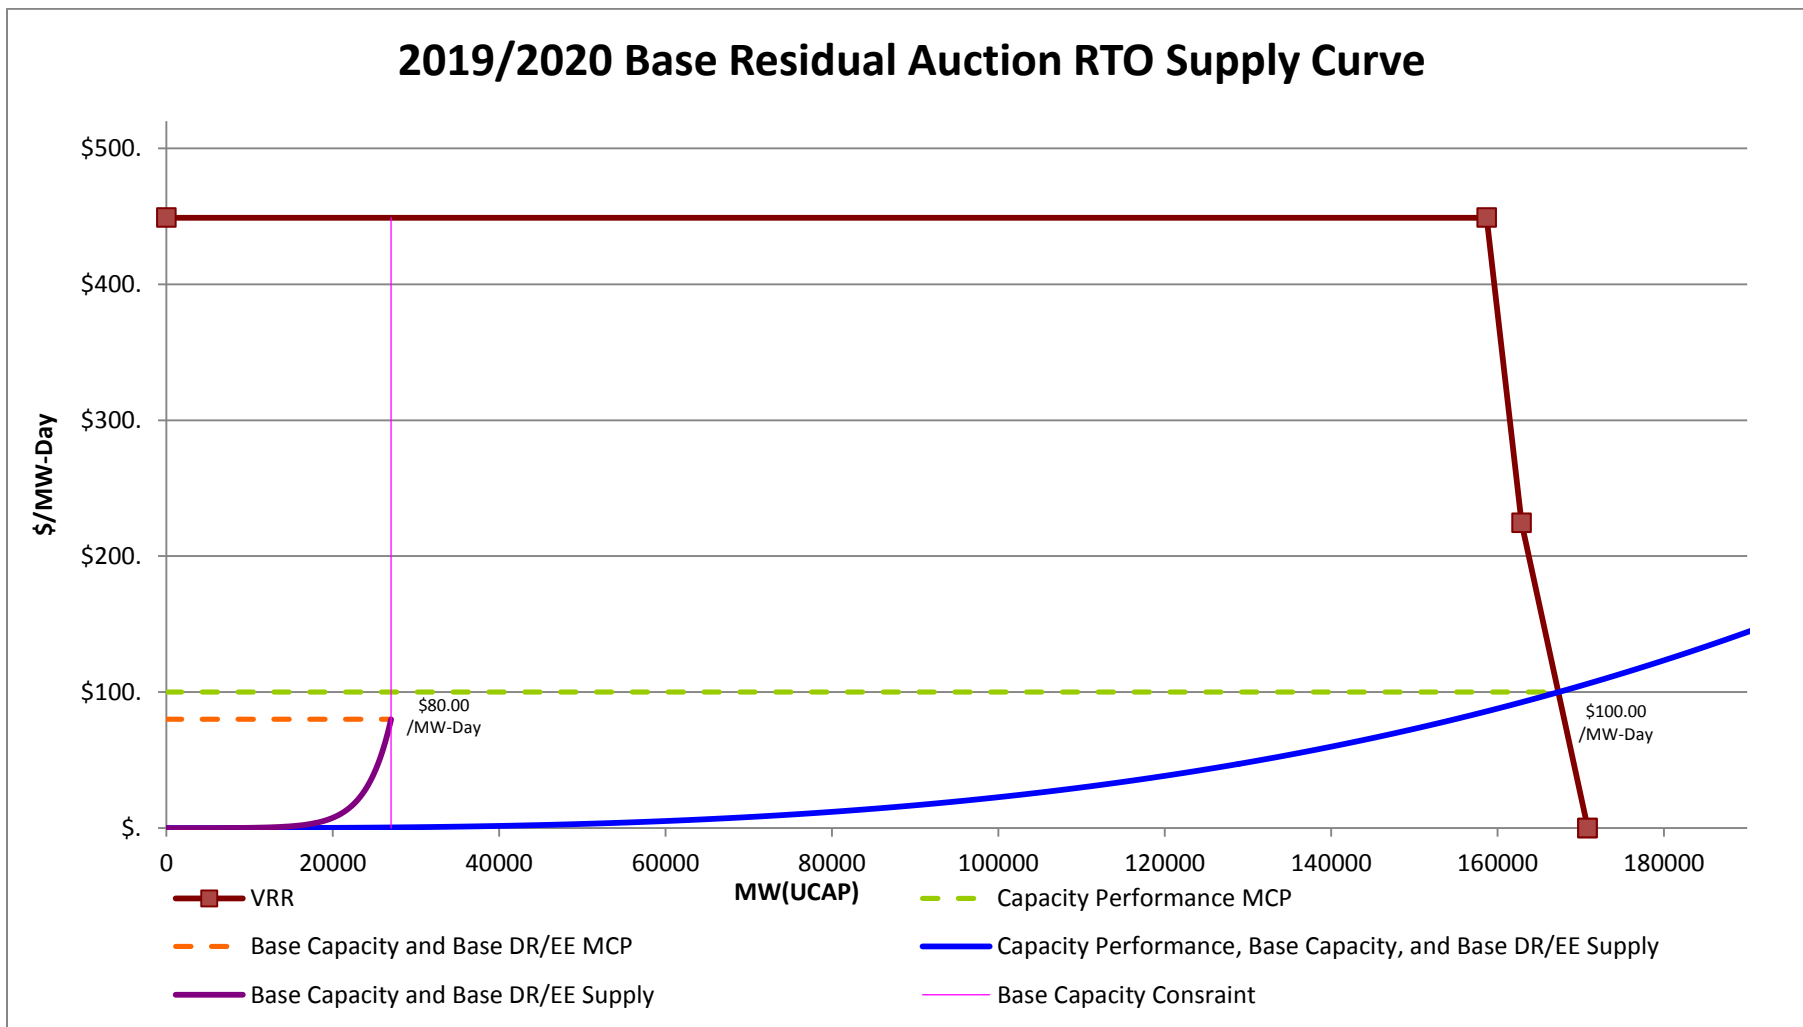

Figure 1:

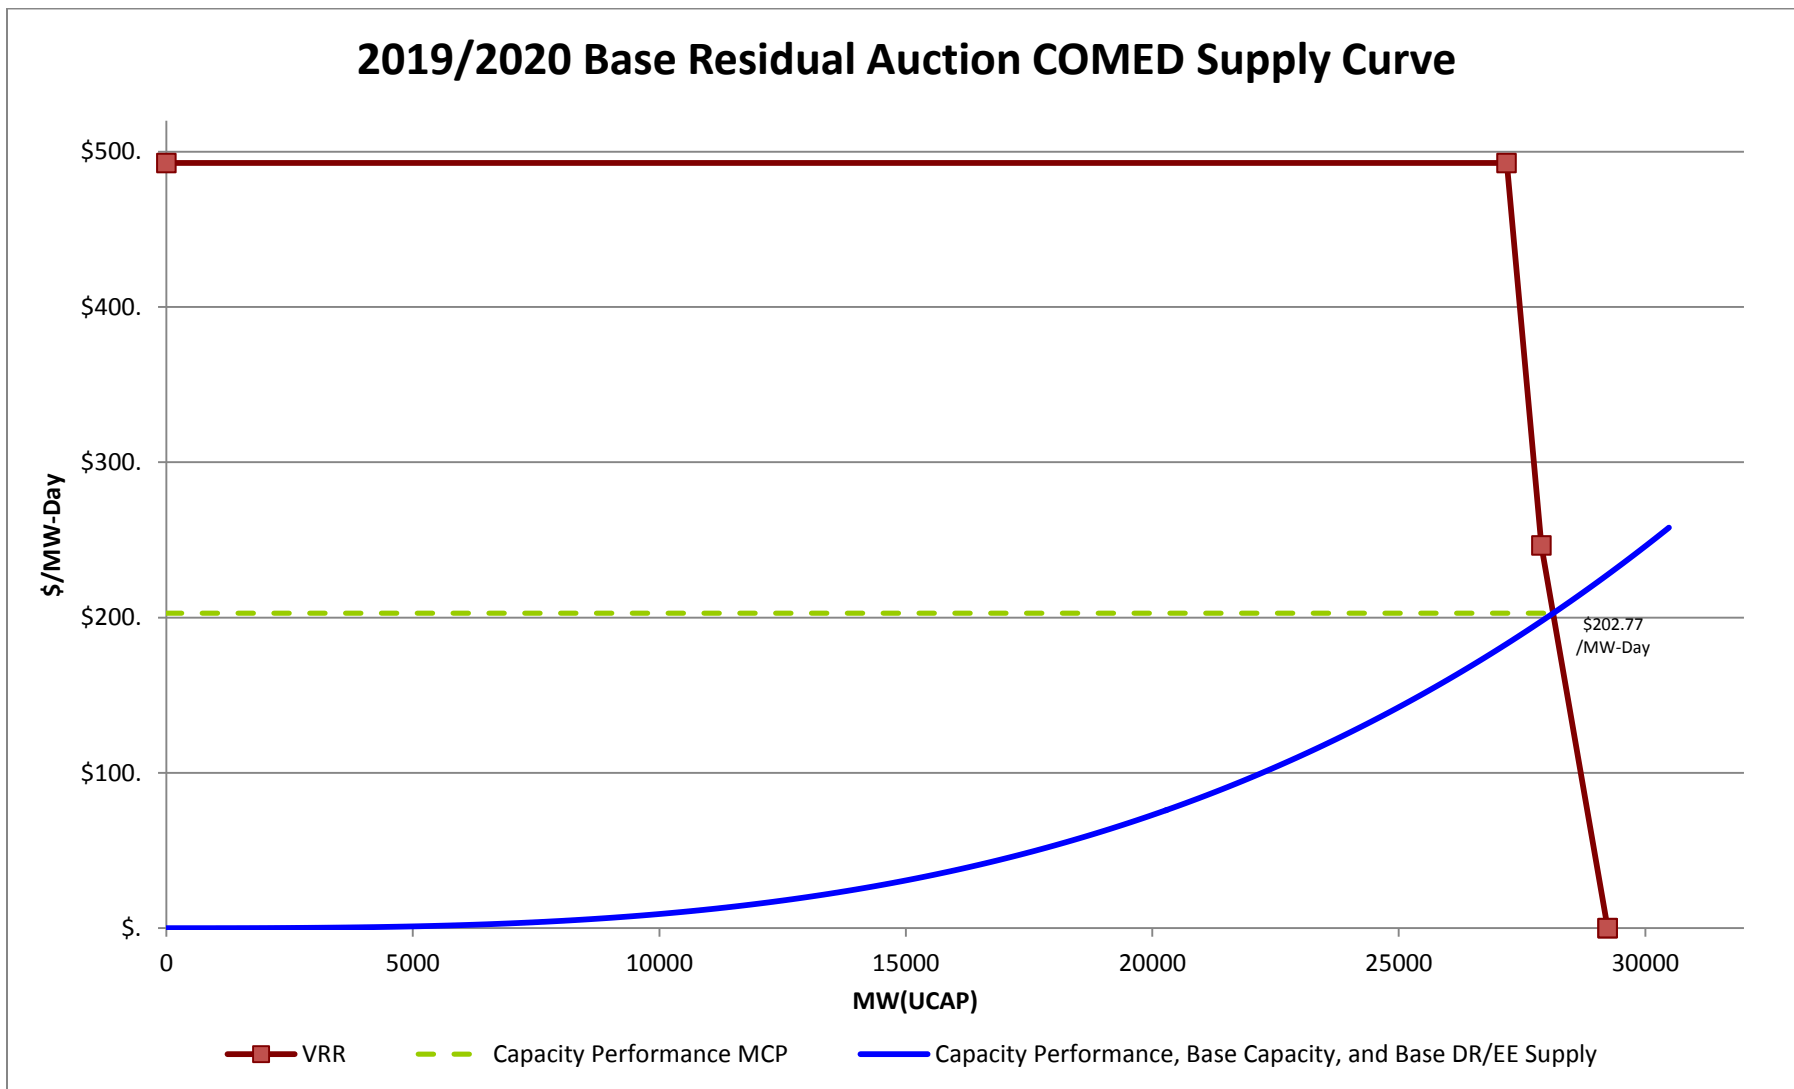

- RTO supply curve includes sell offers from all LDAs
- Sell offers within Constrained LDAs that cleared at a price higher than the RTO resource clearing price were assumed to be zero in graphing the RTO supply curve
- The Base Capacity Constraint was binding at the RTO level
- Coupled sell offers that did not clear are represented using the sell offer with the lowest offer price

Figure 2:

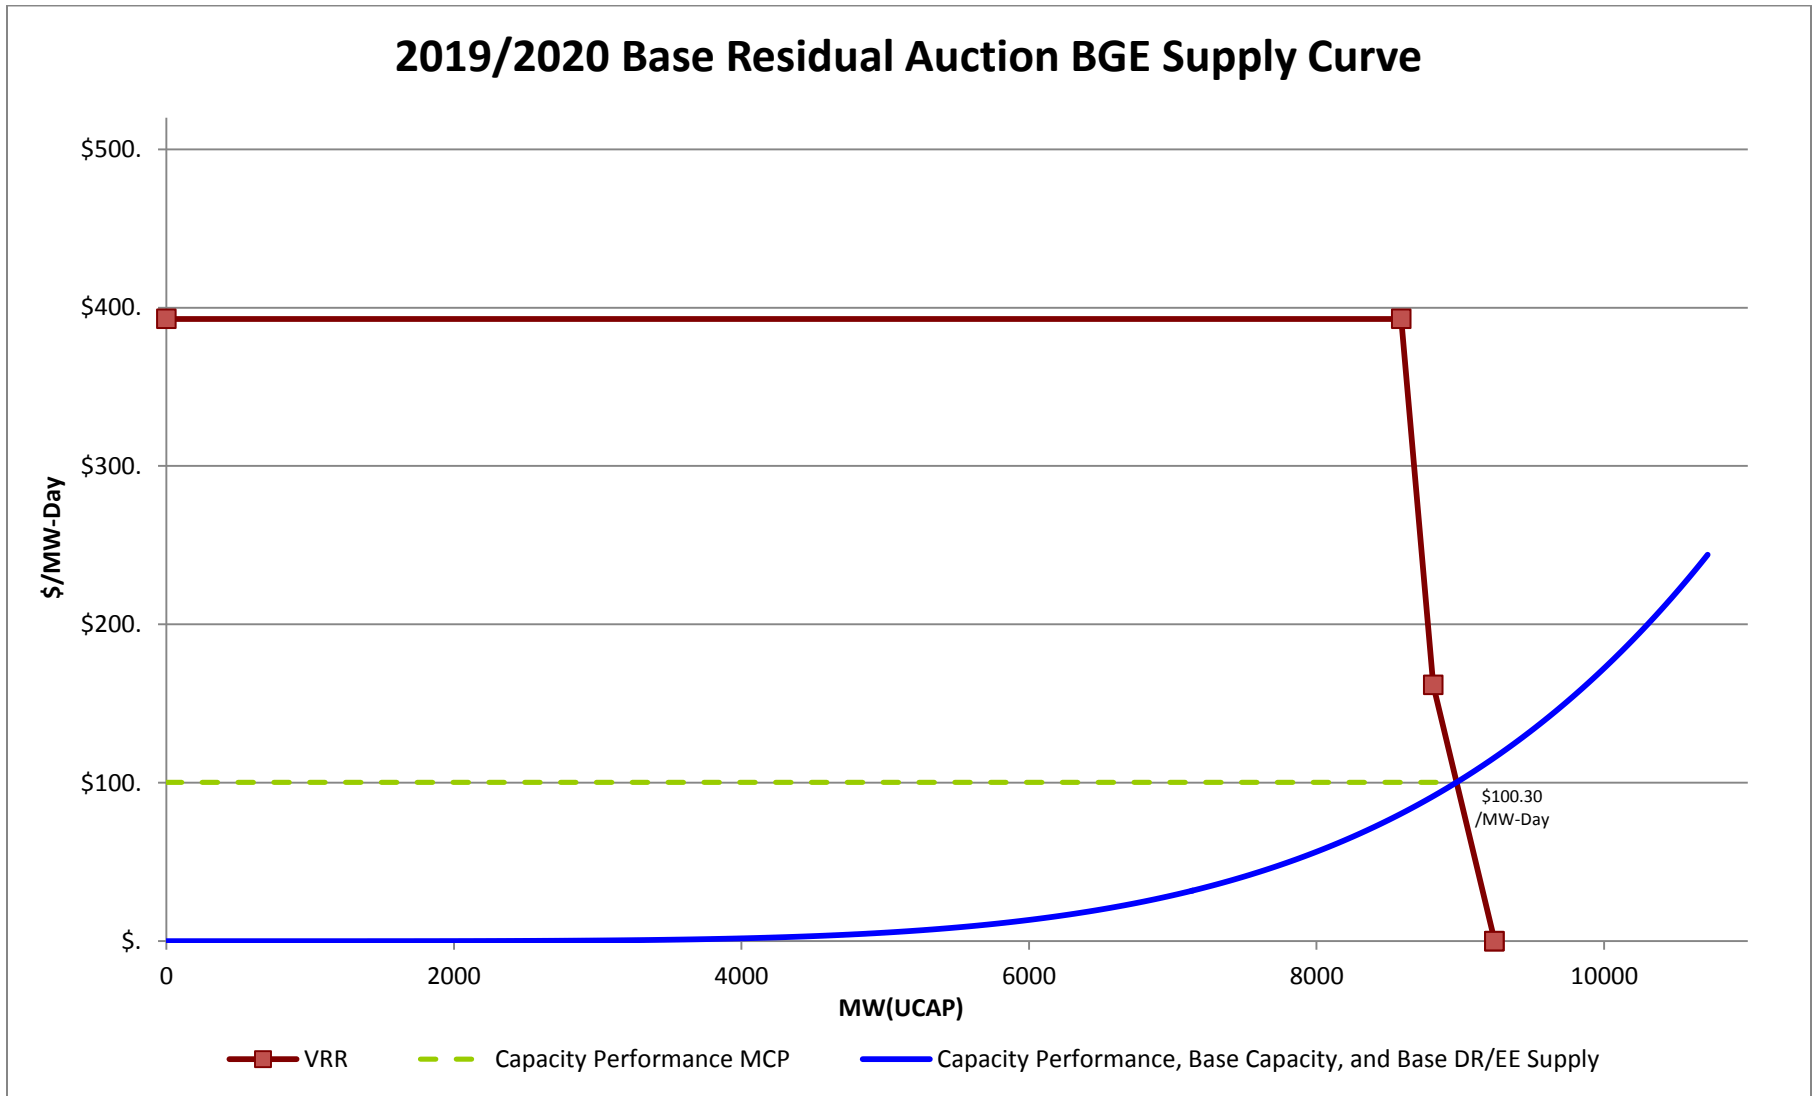

- EMAAC supply curve includes sell offers of all product types (Capacity Performance, Base Capacity, and Base DR/EE)
- Imported MWs are represented with a zero sell offer price

Figure 3:

- COMED supply curve includes sell offers of all product types (Capacity Performance, Base Capacity, and Base DR/EE)
- Imported MWs are represented with a zero sell offer price

Figure 4:

- BGE supply curve includes sell offers of all product types (Capacity Performance, Base Capacity, and Base DR/EE)
- Imported MWs are represented with a zero sell offer price
