Re: East Kentucky Power Cooperative, Inc.

Docket No. ER22-2163 -000

**Revised Depreciation Rates in Transmission Formula Rate** 

Dear Ms. Bose:

Pursuant to Section 205 of the Federal Power Act<sup>1</sup> and Part 35 of the Commission's regulations,<sup>2</sup> East Kentucky Power Cooperative, Inc. (EKPC) hereby files revised depreciation rates to be used when calculating EKPC's annual transmission revenue requirement (ATRR) and transmission rates under Attachment H-24A of the Open Access Transmission Tariff (Tariff) administrated by PJM Interconnection, L.L.C. (PJM).<sup>3</sup> As explained below, EKPC's revised depreciation rates have been approved by the Kentucky Public Service Commission (Kentucky PSC) for use in EKPC's retail rates for transmission, intangible, and general plant assets. Accordingly, the Commission should accept them as just, reasonable, and not unduly discriminatory.

EKPC initially submitted this filing on May 31, 2022 in Docket No. ER22-2051-000 requesting an effective date of June 1, 2022. EKPC submitted the May 31, 2022 filing via eFiling. The Commission's Staff later informed EKPC that the revised depreciation rates should be submitted via eTariff filing. Accordingly, EKPC is moving to withdraw its May

<sup>&</sup>lt;sup>1</sup> 16 U.S.C. § 824d (2018).

<sup>&</sup>lt;sup>2</sup> 18 C.F.R. Pt. 35 (2021).

<sup>&</sup>lt;sup>3</sup> Pursuant to Order No. 714, this filing is being submitted by PJM on behalf of EKPC as part of an XML filing package that conforms with the Commission's regulations. PJM has agreed to make all filings on behalf of the PJM Transmission Owners in order to retain administrative control over the PJM Tariff. Thus, EKPC has requested that PJM submit this filing in the eTariff system as part of PJM's electronic Intra PJM Tariff.

31, 2022 filing and is hereby refiling the revisions to Appendix D of Attachment H-24A of the Tariff via eTariff filing with the correct eTariff attachments. EKPC has made no substantive revisions to the May 31, 2022 filing.<sup>4</sup> As it did in its May 31, 2022 filing, EKPC respectfully requests waiver of the Commission's 60-day prior-notice requirement<sup>5</sup> to allow the revised depreciation rates to accepted effective for the rate year that begins June 1, 2022. As explained below, good cause justifies such a waiver.EKPC submits this request for authorization as a limited-scope or single-issue Section 205 filing. The Commission has explained that a single-issue Section 205 filing is appropriate when a proposed rate change only impacts the timing of revenue collection, not the overall amount of revenue recovered, such as with depreciation rates.<sup>6</sup> Consistent with Commission precedent, EKPC submits this request for authorization to implement its state-approved revised depreciation rates as a limited-scope or single-issue Section 205 filing.

# I. Correspondence and Communications

All communications regarding this filing should be directed to the following persons, who should be included on the official service list established for this proceeding:<sup>8</sup>

<sup>&</sup>lt;sup>4</sup> EKPC is submitting with this filing two redlines of its revised depreciation rates. As provided in its May 31, 2022 filing in Docket No. ER22-2051-000, EKPC has included in <u>Exhibit EKPC-01</u> a redlined page comparing the revised depreciation rates against the depreciation rates approved by the Commission when EKPC integrated into PJM (*see infra*, n.10). That is the redline that EKPC previously submitted in Docket No. ER22-2051-000. Additionally, EKPC includes a second redlined page in <u>Exhibit EKPC-01</u> comparing the revised depreciation rates with the current version of Appendix D of Attachment H-24A on file in eTariff that does not specify the depreciation rates. This additional redlined page is not a substantive change to the May 31, 2022 filing in Docket No. ER22-2051-000, but simply additional information for the Commission's reference.

<sup>&</sup>lt;sup>5</sup> 18 C.F.R. § 35.3 (2021).

<sup>&</sup>lt;sup>6</sup> Depreciation Accounting, Order No. 618, FERC Stats. & Regs., Regs. Preambles, ¶ 31,104, at 31,694-95 (2000).

<sup>&</sup>lt;sup>7</sup> See, e.g., Arizona Pub. Serv. Co., Docket No. ER11-4184-000, Letter Order (Sept. 26, 2011) (unpublished) (accepting revised depreciation rates as limited-scope or single-issue Section 205 filing); Old Dominion Electric Coop., 133 FERC ¶ 61,261 (2010) (same); Southern Co. Servs., Inc., Docket No. ER11-4284-000, Letter Order (Sept. 16, 2011) (unpublished) (same); ITC Midwest LLC, Docket No. ER10-2110-000, Letter Order (Sept. 2, 2010) (unpublished) (same); Michigan Elec. Transmission Co., LLC, Docket No. ER10-185-000, Letter Order (Dec. 18, 2009) (unpublished) (same).

<sup>&</sup>lt;sup>8</sup> EKPC requests waiver of 18 C.F.R. §§ 385.203 and 385.2010 (2021) to the extent necessary to permit the designation of more than two individuals to receive service in this proceeding.

# II. Background

### A. EKPC

EKPC is a not-for-profit, member-owned state-regulated generation and transmission cooperative responsible for providing and delivering reliable energy to its 16 not-for-profit member-owner distribution cooperatives that power homes and businesses for over one million Kentucky residents in rural Kentucky. As a member-owned, not-for-profit cooperative, EKPC's costs are paid for by its member-owner distribution cooperatives and the retail consumers that they in turn serve. EKPC receives financing from the Rural Utilities Service (RUS), and therefore is not subject to the Commission's "public utility" rate regulation.<sup>9</sup>

EKPC integrated into the PJM market in 2013 to harness the benefits of the large, regional wholesale market. On March 28, 2013, EKPC filed jointly with PJM revisions to the PJM Tariff to integrate EKPC's pricing zone into PJM and to implement a forward-looking formula rate (Formula Rate). Attachment H-24A of the PJM Tariff contains the Formula Rate for establishing the ATRR and rates for transmission service over the facilities of EKPC; the ATRR and rates are updated annually. Appendix D of Attachment H-24A sets out the depreciation rates used in calculating EKPC's ATRR and transmission rates. In its Formula Rate protocols, EKPC commits to seeking Commission approval prior to changing the depreciation rates included in its Formula Rate. Consistent with that commitment, EKPC is seeking Commission approval in this filing to implement the revised depreciation rates that have already been approved by the Kentucky PSC.

<sup>&</sup>lt;sup>9</sup> See 16 U.S.C. § 824a(3) (2018) (FPA Section 201(f) exemption for cooperatives with RUS financing).

<sup>&</sup>lt;sup>10</sup> *PJM Interconnection, L.L.C., et al.*, "Joint Integration Filing," Docket Nos. ER13-1178-000, *et al.* (filed Mar. 28, 2013). The Commission accepted the settlement resolving the outstanding issues in EKPC's PJM dockets via letter order issued May 8, 2014. *East Kentucky Power Cooperative*, 147 FERC ¶ 61,097 (2014).

<sup>&</sup>lt;sup>11</sup> PJM Tariff, Att. H-24, EKPC Formula Rate Protocols, Section 1(h).

## B. EKPC's Kentucky PSC Rate Case

On April 1, 2021, EKPC filed with the Kentucky PSC an application seeking approval of a general adjustment to rates, approval of a new depreciation study, amortization of certain regulatory assets, and other general relief. <sup>12</sup> In the Kentucky PSC Application, with respect to depreciation rates, EKPC requested that the Kentucky PSC approve a depreciation study as of December 31, 2019 that generally updated EKPC's depreciation rates, including the depreciation rates used to establish EKPC's ATRR and transmission rates. EKPC's depreciation rates were last updated based on a depreciation study conducted in 2005. <sup>13</sup> The Kentucky PSC approved a settlement of the Kentucky PSC Application, including the revised depreciation rates. <sup>14</sup>

# III. EKPC's Revised Depreciation Rates

### A. Revised Depreciation Rates

The depreciation rates in PJM Tariff Attachment H-24A, Appendix D, are EKPC's currently effective depreciation rates.<sup>15</sup> These rates fall into three categories of Commission accounts under 18 C.F.R. Part 101:

- Transmission Plant: Accounts 350-359;
- Intangible Plant: Account 303; and
- General Plant: Accounts 390-398.

In Order No. 618, the Commission determined that public utilities should use appropriate methods of depreciation to "allocate in a systematic and rational manner the cost of property to the periods during which the property is used in utility operations, i.e., over its estimated useful service life." The Commission has recognized that "the Commission does

<sup>&</sup>lt;sup>12</sup> In the Matter of: The Electronic Application of East Kentucky Power Cooperative, Inc. for a General Adjustment of Rates, Approval of Depreciation Study, Amortization of Certain Regulatory Assets and Other General Relief, "East Kentucky Power Cooperative, Inc.'s Application," Kentucky PSC Case No. 2021-00103 (filed April 1, 2021) (Kentucky PSC Application).

<sup>&</sup>lt;sup>13</sup> In the Matter of: The Electronic Application of East Kentucky Power Cooperative, Inc. for a General Adjustment of Rates, Approval of Depreciation Study, Amortization of Certain Regulatory Assets and Other General Relief, "Order," at 26-27, Kentucky PSC Case No. 2021-00103 (Sept. 30, 2021) (Kentucky PSC Order). The Kentucky PSC Order is included with this filing as Exhibit EKPC-04.

<sup>&</sup>lt;sup>14</sup> Kentucky PSC Order at 26-27.

<sup>&</sup>lt;sup>15</sup> The revised Appendix D is included with this filing in clean and redlined form as Exhibit EKPC-01.

<sup>&</sup>lt;sup>16</sup> Order No. 618 at 31,694.

not impose one single method for depreciation accounting,"<sup>17</sup> but instead reviews a utility's depreciation practices "on a case-by-case basis."<sup>18</sup>

To support its revised depreciation rates, EKPC submits the testimony and depreciation study that were provided to the Kentucky PSC in EKPC's Kentucky PSC Application. This includes the testimony of John J. Spanos, under whose supervision the depreciation study was prepared (Spanos Testimony); the Spanos Testimony is included with this filing as <u>Exhibit EKPC-02</u>. The Spanos Testimony explains that EKPC's revised depreciation rates allocate facility costs "in a systematic and rational manner" over the service lives of the relevant facilities and is consistent with Order No. 618.<sup>19</sup>

# **B.** Depreciation Study

The Spanos Testimony explains that the revised depreciation rates approved by the Kentucky PSC and proposed to be used in Attachment H-24A, Appendix D, were determined using the "2019 Depreciation Study – Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2019" (Depreciation Study), which has been provided with this filing as Exhibit EKPC-03. The Depreciation Study was performed by Gannett Fleming Valuation and Rate Consultants, LLC (Gannett Fleming) on behalf of EKPC. It was filed on April 1, 2021 in Kentucky PSC Case No. 2021-00103 and approved by the Kentucky PSC on September 30, 2021. The Depreciation Study details Gannett Fleming's process, reasoning and conclusions, including the life analysis for transmission and distribution assets by Commission account under 18 C.F.R. Part 101.

As explained in the Spanos Testimony, the proposed depreciation rates for all plant assets except some general plant accounts were calculated using the "straight line remaining life method of depreciation." This method of depreciation aims to distribute the unrecovered cost of fixed capital assets over the remaining useful life of each unit or group of assets in a systematic and rational manner as required in the Commission's Uniform System of Accounts, and has been used in many depreciation studies before the Commission. As Mr. Spanos explains, for General Plant Accounts 391.0, 391.1, 393.0, 394.0, 395.0, 397.0, 397.1, and 398.0, he "used the straight line remaining life method of amortization. The annual amortization is based on amortization accounting that distributes

<sup>&</sup>lt;sup>17</sup> La. Pub. Serv. Comm'n v. Entergy Corp., 153 FERC ¶ 61,188, at P 29 (2015) (citing Order No. 618 at 31,695).

<sup>&</sup>lt;sup>18</sup> Order No. 618 at 31,695.

<sup>&</sup>lt;sup>19</sup> Spanos Testimony at 4:12:15.

<sup>&</sup>lt;sup>20</sup> Kentucky PSC Order at 26-27.

<sup>&</sup>lt;sup>21</sup> Spanos Testimony at 4:11-2.

<sup>&</sup>lt;sup>22</sup> See, e.g., Baltimore Gas and Elec. Co., Docket No. ER20-1929-000, Letter Order (Oct. 9, 2020) (unpublished); Duke Energy Corp., Docket No. ER20-2571-000, Letter Order (Sept. 17, 2020) (unpublished); Duke Energy Carolinas, Docket No. ER18-2231-000, Letter Order (Oct. 11, 2018) (unpublished); Duke Energy Progress, LLC, Docket No. ER18-1228-000, Letter Order (May 18, 2018); Kentucky Utils. Co., Docket No. ER16-1479-000, Letter Order (July 21, 2016) (unpublished).

the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account and vintage."<sup>23</sup>

Mr. Spanos explains that the Depreciation Study is presented in nine parts.<sup>24</sup> Part I, the Introduction, presents the scope and basis for the Depreciation Study. Part II, the Estimation of Survivor Curves, includes descriptions of the methodology of estimating survivor curves. Parts III and IV set forth the analysis for determining service life and net salvage estimates. Part V, the Calculation of Annual and Accrued Depreciation, includes the concepts of depreciation and amortization using the remaining life. Part VI, Results of Study, describes the results of Mr. Spanos's analysis and a summary of the depreciation calculations. Parts VII, VIII, and IX include graphs and tables that relate to the service life and net salvage analyses, and the detailed depreciation calculations by account.

As outlined in the Depreciation Study, the service life and net salvage estimates used in the depreciation and amortization calculations performed as part of the study "were based on informed judgment which incorporated a review of management's plans, policies and outlook, a general knowledge of the electric utility industry, and comparisons of the service life and net salvage estimates from our studies of other electric utilities." Additionally, the "use of survivor curves to reflect the expected dispersion of retirement provides a consistent method of estimating depreciation for electric plant." As explained by Mr. Spanos and summarized in the Depreciation Study, the Depreciation Study used Iowa type survivor curves "to depict the estimated survivor curves for the plant accounts not subject to amortization accounting." <sup>27</sup>

EKPC submits that the proposed depreciation rates for Accounts 350-359, 303, and 390-398, as supported by the Depreciation Study, satisfy the requirements of Order No. 618 and other governing precedent because they systematically and rationally allocate the cost of property over their useful lives.<sup>28</sup>

# C. The Revised Depreciation Rates Are Just and Reasonable

EKPC respectfully submits that the revised depreciation rates included in Attachment H-24A, Appendix D for Accounts 350-359, 303, and 390-398 systematically and rationally allocate costs over EKPC's assets' lives. Therefore, the revised depreciation rates are just, reasonable, and not unduly discriminatory and should be used for purposes of calculating

<sup>&</sup>lt;sup>23</sup> Spanos Testimony at 4:16-20.

<sup>&</sup>lt;sup>24</sup> *Id.* at 4:12-21.

<sup>&</sup>lt;sup>25</sup> Depreciation Study at I-4.

<sup>&</sup>lt;sup>26</sup> *Id.*; Spanos Testimony at 6:11-14.

<sup>&</sup>lt;sup>27</sup> Depreciation Study at I-4; Spanos Testimony at 6:14-7:13.

<sup>&</sup>lt;sup>28</sup> Order No. 618 at 31.694.

EKPC's ATRR and transmission rates under EKPC's Formula Rate included in Attachment H-24A.

Further, the use of EKPC's Kentucky PSC-approved depreciation rates will allow EKPC to synchronize, to the extent possible, the depreciation rates in both its Attachment H-24A and retail rates, which simplifies EKPC's depreciation accounting and avoids the burden and additional cost of maintaining two different sets of books and accounts to track differences between Kentucky PSC-jurisdictional and Commission-jurisdictional depreciation rates.

# IV. Rate Impact of the Formula Rate Revisions

EKPC's Formula Rate in Attachment H-24A calculates EKPC's ATRR and transmission rates on the basis of inputs from EKPC's financial records and supporting work papers, which reflect the RUS's Uniform System of Accounts and EKPC's Form FF1.<sup>29</sup> Other than updating the depreciation rates in the attached Attachment H-24A, Appendix D, the Formula Rate included in EKPC's Commission-approved Attachment H-24A will not be affected by this filing.

As shown in the rate impact analysis included with this filing as Exhibit EKPC-05, the revised depreciation rates have an overall impact of increasing transmission-related depreciation expense by approximately \$2,191,755 in 2021, and an increase in total accumulated depreciation of approximately \$3,944,311.<sup>30</sup> Turning to ATRR and transmission rates, for 2021, the actual ATRR was \$1,321,111 higher due to the increase in depreciation expense (\$81,811,251 for 2021 including three months with the revised depreciation rates, less \$80,490,140 for 2021 without the change in depreciation rates). The corresponding network rates were \$2.401/kW-mo. in 2021 with the revised depreciation rates, and \$2.363/kW-mo. in 2021 without the revised depreciation rates, for a difference of \$0.038/kW-mo.<sup>31</sup>

<sup>&</sup>lt;sup>29</sup> EKPC is not subject to the Commission's "public utility" rate regulation and therefore does not prepare or file with the Commission a FERC Form No. 1. However, EKPC annually prepares a report on its finances and expenses containing information that maps to the FERC Form No. 1. EKPC files that report with the Kentucky PSC. That document is designated as the EKPC Form FF1.

<sup>&</sup>lt;sup>30</sup> As shown in Exhibit EKPC-05, the *monthly* change in transmission-related depreciation expense in 2021 is \$182,646.29 (which is shown in the column labeled "Monthly Change" and is derived by dividing the "3 Months Depr Rate Change Impact" figure of \$547,938.88 by 3). That results in an annual change in transmission-related depreciation expense in 2022 of \$2,191,755.48 (i.e., \$182,646.29 monthly increase times 12 months). The change in total accumulated depreciation is \$3,944,310.96, i.e., the use of the revised depreciation rates results in an increase in accumulated depreciation for 2021 of approximately \$3,944,311.

<sup>&</sup>lt;sup>31</sup> The actual ATRR and network rate for 2021 are shown in the column labeled "Actual (9old, 3 new)" and reflects 9 months of 2021 using the existing depreciation rates and 3 months of the revised depreciation rates. As noted above, the Kentucky PSC approved the revised depreciation rates effective October 1, 2021. (The three months of the revised depreciation rates are therefore October, November, and December 2021.) For comparison, the ATRR and network rate for 2021 without the revised depreciation rates are shown in the column

In 2022, the actual ATRR is \$89,590,957 with the revised depreciation rates, and \$82,883,877 without the revised depreciation rates, for a change in ATRR of \$6,707,080 (i.e., the ATRR in 2022 is \$6,707,080 higher than what it would have been without the change in depreciation rates). The resulting network rate is \$2.356/kW-mo., compared to a network rate of \$2.180/kW-mo. (for a change of \$0.176/kW-mo.).<sup>32</sup> The network rate in 2022 is lower than the network rate in 2021 because the 1-CP for 2022, which is used in the calculation of the network rate, was higher than the 1-CP in 2021 (i.e., a bigger denominator in the calculation of the network rate).

### V. Requested Effective Date and Request for Waiver

Pursuant to Section 35.13(b)(2) of the Commission's regulations, EKPC respectfully requests that the revised depreciation rates be made effective for the rate year beginning June 1, 2022.<sup>33</sup> Pursuant to Section 35.11 of the Commission's regulations, EKPC requests waiver of the 60-day prior-notice requirement to permit this effective date.<sup>34</sup> Good cause exists for this waiver.<sup>35</sup> In connection with preparation of its annual update to its Formula Rate for the rate year commencing June 1, 2022, EKPC became aware of the need to file with the Commission its revised depreciation rates. EKPC has endeavored to make this filing as expeditiously as possible and prior to the start of the rate year commencing June 1, 2022 to ensure that its ATRR and transmission rates can be calculated based on revised depreciation rates on file with the Commission. EKPC initially submitted this filing on May 31, 2022 in Docket No. ER22-2051-000. Because EKPC had submitted that filing via eFiling instead of eTariff, the Commission's Staff requested that EKPC withdraw the May 31 filing and refile it in eTariff, requesting the same effective date (June 1, 2022). Accordingly, contemporaneously with this eTariff filing, EKPC is filing a motion to withdraw the May 31 filing in Docket No. ER22-2051-000 and is seeking for this filing the same effective date as in Docket No. ER22-2051-000.

EKPC is filing its revised depreciation rates to bring its Commission-approved depreciation rates in line with its Kentucky PSC-approved depreciation rates. Granting the requested waiver would also promote consistency in the depreciation rates used for federal and state ratemaking purposes, and avoid discrepancy between EKPC's state-approved depreciation rates and EKPC's depreciation rates used in its Formula Rate in PJM's Attachment H-24A.

labeled "Restated (12mo old)" and reflects the use of the existing depreciation rates without implementing the revised depreciation rates.

<sup>&</sup>lt;sup>32</sup> The actual ATRR and network rate for 2022 are shown in the column labeled "Actual." The ATRR and network rate for 2022 without use of the revised depreciation rates are shown in the column labeled "Restated."

<sup>&</sup>lt;sup>33</sup> 18 C.F.R. § 35.13(b)(2) (2021).

<sup>&</sup>lt;sup>34</sup> 18 C.F.R. § 35.11 (2021).

<sup>&</sup>lt;sup>35</sup> See Central Hudson Gas & Elec. Corp., 60 FERC ¶ 61,106, order on reh'g, 61 FERC ¶ 61,089 (1992).

EKPC also respectfully requests that it be allowed to make an adjustment during its 2021 Attachment H-24A true-up process, to recognize October 1, 2021 as the effective date for its revised depreciation rates for accounting purposes. That is the effective date granted by the Kentucky PSC for the revised depreciation rates.<sup>36</sup> This request is consistent with the Commission's finding in *Southwest Power Pool, Inc.*, in which the Commission allowed depreciation rates that were updated for accounting purposes or pursuant to state regulatory requirements to be reflected in a formula rate true-up.<sup>37</sup>

# VI. Additional Information Required by Section 35.13

# A. Contents of Filing – Section 35.13(b)(1)

EKPC provides the following materials with this filing:

- This transmittal letter;
- Clean and marked tariff records;
- <u>Exhibit EKPC-01</u> Revised EKPC Depreciation Rates (PJM Attachment H-24A, Appendix D) (clean and redline);
- <u>Exhibit EKPC-02</u> –Spanos Testimony;
- Exhibit EKPC-03 Depreciation Study;
- <u>Exhibit EKPC-04</u> Kentucky PSC Order; and
- Exhibit EKPC-05 Rate Impact Analysis.

In addition, PJM, on behalf of EKPC, is submitting the proposed Tariff revisions through the Commission's eTariff platform.

# B. The Name and Address of Persons to Whom a Copy of the Rate Change Has Been Posted – Section 35.13(b)(3)

PJM has served a copy of this filing on all PJM Members and on all state utility regulatory commissions in the PJM Region by posting this filing electronically. In accordance with the Commission's regulations,<sup>38</sup> PJM will post a copy of this filing to the FERC filings section of its internet site, located at the following link: <a href="http://www.pjm.com/documents/ferc-manuals/ferc-filings.aspx">http://www.pjm.com/documents/ferc-manuals/ferc-filings.aspx</a> with a specific link to the

<sup>&</sup>lt;sup>36</sup> Kentucky PSC Order at 38, P 3.

<sup>&</sup>lt;sup>37</sup> Southwest Power Pool, Inc., 167 FERC ¶ 61,202, at PP 15-18 (2019).

<sup>&</sup>lt;sup>38</sup> See 18 C.F.R §§ 35.2(e) and 385.2010(f)(3) (2021).

newly-filed document, and will send an e-mail on the same date as this filing to all PJM Members and all state utility regulatory commissions in the PJM Region<sup>39</sup> alerting them that this filing has been made by PJM and is available by following such link. If the document is not immediately available by using the referenced link, the document will be available through the referenced link within 24 hours of the filing. Also, a copy of this filing will be available on the Commission's eLibrary website located at the following link: <a href="http://www.ferc.gov/docs-filing/elibrary.asp">http://www.ferc.gov/docs-filing/elibrary.asp</a> in accordance with the Commission's regulations and Order No. 714.

### C. Brief Description of Rate Change – Section 35.13(b)(4)

Section III above, the Spanos Testimony, and the Depreciation Study provide a detailed description of EKPC's revised depreciation rates.

#### D. Statement of Reason for Rate Change – Section 35.13(b)(5)

As explained in Sections II and III above, EKPC is making this filing to ensure that EKPC has the necessary Commission approval to implement, in its Formula Rate under PJM Tariff Attachment H-24A, its Kentucky PSC depreciation rates that were developed pursuant to a new depreciation study.

# E. Requisite Agreement for Rate Change – Section 35.13(b)(6)

As explained in Sections II and III above and as indicated in the Kentucky PSC Order included as <u>Exhibit EKPC-04</u>, the revised depreciation rates have been approved by the Kentucky PSC.

# F. Statement Showing Expenses or Costs Included in Cost-of-Service Statements – Section 35.13(b)(7)

None of the costs related to this filing has been alleged in any administrative or judicial proceeding to be illegal, duplicative, or unnecessary costs that are demonstrably the product of discriminatory practices.

### G. Rate Comparison – Section 35.13(c)(1)

Section V above and <u>Exhibit EKPC-05</u> discuss the impact of the revised depreciation rates on EKPC's ATRR and transmission rates under PJM Tariff Attachment H-24A.

<sup>&</sup>lt;sup>39</sup> PJM already maintains, updates and regularly uses e-mail lists for all PJM members and affected state commissions.

# H. Comparison with Other Rates – Section 35.13(c)(2)

Section 35.13(c)(2) requires "[a] comparison of the rate change and the utility's other rates for similar wholesale for resale and transmission services." EKPC has no rates other than the rate in its Formula Rate for similar transmission services.

### I. Installed or Modified Facilities - Section 35.13(c)(3)

No facilities were installed or modified in order to supply service pursuant to the revised Formula Rate.

### J. Cost-of-Service Information, Testimony, and Statements

EKPC believes that it has provided sufficient information for the Commission to evaluate and accept the revised depreciation rates. To the extent that this filing does not contain information otherwise required for technical compliance with the Commission's regulations, EKPC respectfully requests that compliance with such regulation be waived.<sup>41</sup> As noted, the Commission generally permits limited-scope and single-issue Section 205 filings for revisions to depreciation rates.<sup>42</sup>

#### VII. Conclusion

**Wherefore**, East Kentucky Power Cooperative, Inc. respectfully requests that the Commission accept the revised depreciation rates effective June 1, 2022. Please contact the undersigned should there be any questions regarding this filing. Thank you for your attention to this matter.

Respectfully submitted,

/s/ Daniel E. Frank
Daniel E. Frank

#### I. INTRODUCTION

- 1 Q. PLEASE STATE YOUR NAME AND ADDRESS.
- 2 A. My name is John J. Spanos. My business address is 207 Senate Avenue, Camp
- 3 Hill, Pennsylvania, 17011.
- 4 O. ARE YOU ASSOCIATED WITH ANY FIRM?
- 5 A. Yes. I am associated with the firm of Gannett Fleming Valuation and Rate
- 6 Consultants, LLC (Gannett Fleming).
- 7 Q. HOW LONG HAVE YOU BEEN ASSOCIATED WITH GANNETT
- **FLEMING?**
- 9 A. I have been associated with the firm since June 1986.
- 10 O. WHAT IS YOUR POSITION WITH THE FIRM?
- 11 A. I am the President.
- 12 Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS CASE?
- 13 A. I am testifying on behalf of East Kentucky Power Cooperative. ("EKPC" or
- "Company").
- 15 Q. PLEASE STATE YOUR QUALIFICATIONS.
- 16 A. I have over 34 years of depreciation experience which includes giving expert
- testimony in over 350 cases before 41 regulatory commissions in the United States
- and Canada, including this Commission. The cases include depreciation studies in
- the electric, gas, water, wastewater and pipeline industries. In addition to the cases
- where I have submitted testimony, I have supervised in over 700 other depreciation
- or valuation assignments. Please refer to Appendix A for additional information
- on my qualifications, which includes further information with respect to my work

- history, case experience, and my leadership in the Society of Depreciation
- 2 Professionals.
- 3 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS
- 4 **PROCEEDING?**
- 5 A. My testimony will support and explain the depreciation study conducted under my
- direction and supervision for the electric utility plant of EKPC. The study
- 7 represents all electric plant assets.
- **8 Q. ARE YOU SPONSORING ANY FILING REQUIREMENTS?**
- 9 **A.** Yes, the depreciation study meets the filing requirements contained in 807 KAR 5:001, Section 16(4)(n).

# II. <u>DISCUSSION</u>

- 11 Q. PLEASE DEFINE THE CONCEPT OF DEPRECIATION.
- 12 A. Depreciation refers to the loss in service value not restored by current maintenance,
- incurred in connection with the consumption or prospective retirement of utility
- plant in the course of service from causes which are known to be in current
- operation, against which the Company is not protected by insurance. Among the
- causes to be given consideration are wear and tear, decay, action of the elements,
- obsolescence, changes in the art, changes in demand and the requirements of public
- authorities.
- 19 Q. PLEASE IDENTIFY EXHIBIT JJS-1.
- 20 A. Exhibit JJS-1 is a report entitled, "2019 Depreciation Study Calculated Annual
- Depreciation Accruals Related to Electric Plant as of December 31, 2019." This
- report sets forth the results of my depreciation study for EKPC.

| 1  | Q. | IS EXHIBIT JJS-1 A TRUE AND ACCURATE COPY OF YOUR                                     |
|----|----|---|
| 2  |    | DEPRECIATION STUDY?   |
| 3  | A. | Yes.  |
| 4  | Q. | DOES EXHIBIT JJS-1 ACCURATELY PORTRAY THE RESULTS OF                                  |
| 5  |    | YOUR DEPRECIATION STUDY AS OF DECEMBER 31, 2019?                                      |
| 6  | A. | Yes.  |
| 7  | Q. | WHAT WAS THE PURPOSE OF YOUR DEPRECIATION STUDY?                                      |
| 8  | A. | The purpose of the depreciation study was to estimate the annual depreciation         |
| 9  |    | accruals related to electric plant in service for ratemaking purposes and determine   |
| 10 |    | appropriate average service lives and net salvage percents for each plant account.    |
| 11 | Q. | PLEASE DESCRIBE THE CONTENTS OF YOUR REPORT.  |
| 12 | A. | The Depreciation Study is presented in nine parts. Part I, Introduction, presents the |
| 13 |    | scope and basis for the Depreciation Study. Part II, Estimation of Survivor Curves,   |
| 14 |    | includes descriptions of the methodology of estimating survivor curves. Parts III     |
| 15 |    | and IV set forth the analysis for determining service life and net salvage estimates. |
| 16 |    | Part V, Calculation of Annual and Accrued Depreciation, includes the concepts of      |
| 17 |    | depreciation and amortization using the remaining life. Part VI, Results of Study,    |
| 18 |    | presents a description of the results of my analysis and a summary of the             |
| 19 |    | depreciation calculations. Parts VII, VIII and IX include graphs and tables that      |
| 20 |    | relate to the service life and net salvage analyses, and the detailed depreciation    |
| 21 |    | calculations by account.  |
| 22 |    | The Depreciation Study also includes several tables and tabulations of data           |
| 23 |    | and calculations. Table 1 on pages VI-4 through VI-8 of the Depreciation Study        |

presents the estimated survivor curve, the net salvage percent, the original cost as of December 31, 2019, the book depreciation reserve, and the calculated annual depreciation accrual and rate for each account or subaccount. The section beginning on page VII-2 presents the results of the retirement rate analyses prepared as the historical bases for the service life estimates. The section beginning on page VIII-2 presents the results of the net salvage analysis. The section beginning on page IX-2 presents the depreciation calculations related to surviving original cost as of December 31, 2019.

# 9 Q. PLEASE EXPLAIN HOW YOU PERFORMED YOUR DEPRECIATION 10 STUDY.

A.

I used the straight line remaining life method of depreciation, with the average service life procedure for all plant assets except some general plant accounts. The annual depreciation is based on a method of depreciation accounting that seeks to distribute the unrecovered cost of fixed capital assets over the estimated remaining useful life of each unit, or group of assets, in a systematic and rational manner.

For General Plant Accounts 391.0, 391.1, 393.0, 394.0, 395.0, 397.0, 397.1 and 398.0, I used the straight line remaining life method of amortization. The annual amortization is based on amortization accounting that distributes the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account and vintage.

# Q. HOW DID YOU DETERMINE THE RECOMMENDED ANNUAL DEPRECIATION ACCRUAL RATES?

- A. I did this in two phases. In the first phase, I estimated the service life and net salvage characteristics for each depreciable group, that is, each plant account or subaccount identified as having similar characteristics. In the second phase, I calculated the composite remaining lives and annual depreciation accrual rates based on the service life and net salvage estimates determined in the first phase.
- Q. PLEASE DESCRIBE THE FIRST PHASE OF THE DEPRECIATION
   STUDY, IN WHICH YOU ESTIMATED THE SERVICE LIFE AND NET
   SALVAGE CHARACTERISTICS FOR EACH DEPRECIABLE GROUP.
- 9 A. The service life and net salvage study consisted of compiling historic data from
  10 records related to EKPC's plant; analyzing these data to obtain historic trends of
  11 survivor and net salvage characteristics; obtaining supplementary information from
  12 EKPC's management, and operating personnel concerning practices and plans as
  13 they relate to plant operations; and interpreting the above data and the estimates
  14 used by other electric utilities to form judgments of average service life and net
  15 salvage characteristics.
- 16 Q. WHAT HISTORIC DATA DID YOU ANALYZE FOR THE PURPOSE OF
  17 ESTIMATING SERVICE LIFE CHARACTERISTICS?
- A. I analyzed the EKPC's accounting entries that record plant transactions during the period 1984 through 2019. The transactions included additions, retirements, transfers and the related balances. EKPC records also included surviving dollar value by year installed for each plant account as of December 31, 2019.
- Q. WHAT METHOD DID YOU USE TO ANALYZE THIS SERVICE LIFE
  DATA?

- 1 A. I used the retirement rate method. This is the most appropriate method when aged
  2 retirement data are available, because this method determines the average rates of
  3 retirement actually experienced by EKPC during the period of time covered by the
  4 study.
- 5 Q. PLEASE DESCRIBE HOW YOU USED THE RETIREMENT RATE
  6 METHOD TO ANALYZE EKPC'S SERVICE LIFE DATA.
- 7 A. I applied the retirement rate method to each different group of property in the study. For each property group, I used the retirement rate method to form a life table 8 which, when plotted, shows an original survivor curve for that property group. 9 Each original survivor curve represents the average survivor pattern experienced 10 by the several vintage groups during the experience band studied. The survivor 11 patterns do not necessarily describe the life characteristics of the property group; 12 therefore, interpretation of the original survivor curves is required in order to use 13 14 them as valid considerations in estimating service life. The Iowa-type survivor 15 curves were used to perform these interpretations.
- 16 Q. WHAT IS AN "IOWA-TYPE SURVIVOR CURVE" AND HOW DID YOU

  17 USE SUCH CURVES TO ESTIMATE THE SERVICE LIFE

  18 CHARACTERISTICS FOR EACH PROPERTY GROUP?
- 19 A. Iowa type curves are a widely used group of generalized survivor curves that
  20 contain the range of survivor characteristics usually experienced by utilities and
  21 other industrial companies. The Iowa curves were developed at the Iowa State
  22 College Engineering Experiment Station through an extensive process of observing

and classifying the ages at which various types of property used by utilities and other industrial companies had been retired.

A.

Iowa type curves are used to smooth and extrapolate original survivor curves determined by the retirement rate method. The Iowa curves and truncated Iowa curves were used in this study to describe the forecasted rates of retirement based on the observed rates of retirement and the outlook for future retirements.

The estimated survivor curve designations for each depreciable property group indicate the average service life, the family within the Iowa system to which the property group belongs, and the relative height of the mode. For example, the Iowa 60-R2 indicates an average service life of sixty years; a right-moded, or R, type curve (the mode occurs after average life for right-moded curves); and a moderate height, 2, for the mode (possible modes for R type curves range from 0.5 to 5).

# Q. WHAT APPROACH DID YOU USE TO ESTIMATE THE LIVES OF SIGNIFICANT PRODUCTION FACILITIES?

I used the life span technique to estimate the lives of significant facilities for which concurrent retirement of the entire facility is anticipated. In this technique, the survivor characteristics of such facilities are described by the use of interim survivor curves and estimated probable retirement dates. The interim survivor curve describes the rate of retirement related to the replacement of elements of the facility, such as, for a power plant, the retirement of assets such as pumps, motors and piping that occur during the life of the facility. The probable retirement date provides the rate of final retirement for each year of installation for the facility by

| 1  |    | truncating the interim survivor curve for each installation year at its attained age at |
|----|----|---|
| 2  |    | the date of probable retirement. The use of interim survivor curves truncated at the    |
| 3  |    | date of probable retirement provides a consistent method for estimating the lives of    |
| 4  |    | the several years of installation for a particular facility inasmuch as a single        |
| 5  |    | concurrent retirement for all years of installation will occur when it is retired.      |
| 6  | Q. | IS THIS APPROACH WIDELY ACCEPTED FOR ESTIMATING THE                                     |
| 7  |    | SERVICE LIVES OF PRODUCTION FACILITIES?   |
| 8  | A. | Yes. The life span has been used previously for EKPC. My firm has also used the         |
| 9  |    | life span technique in performing depreciation studies presented to many other          |
| 10 |    | public utility commissions across the United States and Canada as well as for other     |
| 11 |    | electric utilities in Kentucky.   |
| 12 | Q. | HOW ARE THE LIFE SPANS ESTIMATED FOR EKPC'S PRODUCTION                                  |
| 13 |    | FACILITIES?   |
| 14 | A. | The life span estimates are based on informed judgment that incorporates factors        |
| 15 |    | for each facility such as the technology of the facility, management plans and          |
| 16 |    | outlook for the facility, and the estimates for similar facilities for other utilities. |
| 17 | Q. | ARE THE FACTORS CONSIDERED IN YOUR ESTIMATES OF SERVICE                                 |
| 18 |    | LIFE AND NET SALVAGE PERCENTS PRESENTED IN EXHIBIT JJS-1?                               |
| 19 | A. | Yes. A discussion of the factors considered in the estimation of service lives and      |
| 20 |    | net salvage percents are presented in Part III and Part IV of Exhibit JJS-1.            |
| 21 | Q. | HAVE YOU PHYSICALLY OBSERVED EKPC'S PLANT AND   |

**EQUIPMENT AS PART OF YOUR DEPRECIATION STUDIES?** 

22

Yes. I made field reviews of EKPC's property during September 2018 to observe representative portions of plant. Due to travel restrictions and pandemic guidelines, only a virtual site visit of facilities were conducted for this study in November 2020. Field reviews are conducted to become familiar with Company operations and obtain an understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements. This knowledge was incorporated in the interpretation and extrapolation of the statistical analyses.

A.

A.

#### O. WOULD YOU PLEASE EXPLAIN THE CONCEPT OF "NET SALVAGE"?

Net salvage is a component of the service value of capital assets that is recovered through depreciation rates. The service value of an asset is its original cost less its net salvage. Net salvage is the salvage value received for the asset upon retirement less the cost to retire the asset. When the cost to retire exceeds the salvage value, the result is negative net salvage.

Inasmuch as depreciation expense is the loss in service value of an asset during a defined period, e.g. one year, it must include a ratable portion of both the original cost and the net salvage. That is, the net salvage related to an asset should be incorporated in the cost of service during the same period as its original cost so that customers receiving service from the asset pay rates that include a portion of both elements of the asset's service value, the original cost and the net salvage value.

For example, the full recovery of the service value of a \$5,000 circuit breaker will include not only the \$5,000 of original cost, but also, on average, \$550

- to remove the circuit breaker at the end of its life and \$50 in salvage value. In this
  example, the net salvage component is negative \$500 (\$50 \$550), and the net
  salvage percent is negative 10% ((\$50 \$550)/\$5,000).
- 4 Q. PLEASE DESCRIBE HOW YOU ESTIMATED NET SALVAGE
  5 PERCENTAGES.
- 6 A. The net salvage percentages estimated in the Depreciation Study were based on informed judgment that incorporated factors such as the statistical analyses of 7 historical net salvage data; information provided to me by EKPC's operating 8 personnel, general knowledge and experience of the industry practices; and trends 9 10 in the industry in general. The statistical net salvage analyses incorporates EKPC's actual historical data for the period 2005 through 2019, and considers the cost of 11 removal and gross salvage ratios to the associated retirements during the 15-year 12 period. Trends of these data are also measured based on three-year moving 13 14 averages and the most recent five-year indications.

# 15 Q. WERE THE NET SALVAGE PERCENTAGES FOR GENERATING 16 FACILITIES BASED ON THE SAME ANALYSES?

17

18

19

20

21

22

A. Yes, for the interim net salvage estimates. The net salvage percentages for generating facilities were based on two components, the interim net salvage percentage and the final net salvage percentage. The interim net salvage percentage is determined based on the historical indications from the period 2005 to 2019 of the cost of removal and gross salvage amounts as a percentage of the associated plant retired. The final net salvage or dismantlement component was determined

- based on the retirement activities associated with the assets anticipated to be retired
- 2 at the concurrent date of final retirement.
- 3 Q. HAVE YOU INCLUDED A DISMANTLEMENT OR DECOMMISSIONING
- 4 COMPONENT INTO THE OVERALL RECOVERY OF GENERATING
- 5 **FACILITIES?**
- 6 A. Yes. A dismantlement or decommissioning component has been included to the
  7 net salvage percentage for steam and other production facilities.
- 8 Q. CAN YOU EXPLAIN HOW THE FINAL NET SALVAGE COMPONENT IS
- 9 INCLUDED IN THE DEPRECIATION STUDY?
- Yes. The dismantlement component is part of the overall net salvage for each 10 A. location within the production assets. Based on studies for other utilities, it was 11 determined that the dismantlement or decommissioning costs for steam and other 12 production facilities is best calculated by dividing the dismantlement cost by the 13 14 surviving plant at final retirement. These amounts at a location basis are added to the interim net salvage percentage of the assets anticipated to be retired on an 15 interim basis to produce the weighted net salvage percentage for each location. The 16 17 calculation of terminal and interim retirements as a percentage of plant by location is set forth in Table 1, page VIII-2 of the Depreciation Study. The detailed 18 19 calculations of the overall net salvage for each location is set forth on Table 2, page 20 VIII-3 of the Depreciation Study.
- Q. WHAT IS THE BASIS OF THE DISMANTLEMENT OR
  DECOMMISSIONING COST ESTIMATES?

- Α. The decommissioning cost estimates are based on decommissioning estimates of 1 2 other similar generating sites across the United States. For most steam facilities a 3 utility standard has been to expect costs to be comparable to \$40/kw. The costs for other production plant are \$10/kw for combustion turbines and landfill locations 4 and \$5/kw for solar facilities. However, the costs to decommission power plants 5 has tended to increase over time (as have construction costs in general). For this 6 reason, in order to recover the full decommissioning costs for each site, these costs 7 need to be escalated to the time of retirement. The calculations of the escalation of 8 these costs have been provided in the table set forth on page VIII-4 of the 9 Depreciation Study. 10
- Q. PLEASE DESCRIBE THE SECOND PHASE OF THE PROCESS THAT
  YOU USED IN THE DEPRECIATION STUDY IN WHICH YOU
  CALCULATED COMPOSITE REMAINING LIVES AND ANNUAL
  DEPRECIATION ACCRUAL RATES.
- A. After I estimated the service life and net salvage characteristics for each depreciable property group, I calculated the annual depreciation accrual rates for each depreciable group based on the straight line remaining life method, using remaining lives weighted consistent with the average service life procedure. The calculation of annual depreciation accrual rates were developed as of December 31, 2019.
- 20 Q. PLEASE DESCRIBE THE STRAIGHT LINE REMAINING LIFE
  21 METHOD OF DEPRECIATION.

- 1 A. The straight line remaining life method of depreciation allocates the original cost
  2 of the property, less accumulated depreciation, less future net salvage, in equal
  3 amounts to each year of remaining service life.
- Q. PLEASE DESCRIBE THE AVERAGE SERVICE LIFE PROCEDURE FOR
   CALCULATING REMAINING LIFE ACCRUAL RATES.

A. The average service life procedure defines the group or account for which the remaining life annual accrual is determined. Under this procedure, the annual accrual rate is determined for the entire group or account based on its average remaining life and the rate is then applied to the surviving balance of the group's cost. The average remaining life of the group is calculated by first dividing the future book accruals (original cost less allocated book reserve less future net salvage) by the average remaining life for each vintage. The average remaining life for each vintage is derived from the area under the survivor curve between the attained age of the vintage and the maximum age. The sum of the future book accruals is then divided by the sum of the annual accruals to determine the average remaining life of the entire group for use in calculating the annual depreciation accrual rate.

#### O. PLEASE DESCRIBE AMORTIZATION ACCOUNTING.

A. Amortization accounting is used for accounts with a large number of units, but small asset values. In amortization accounting, units of property are capitalized in the same manner as they are in depreciation accounting. However, depreciation accounting is difficult for these assets because periodic inventories are required to properly reflect plant in service. Consequently, retirements are recorded when a

| 1  |    | vintage is fully amortized rather than as the units are removed from service. That   |
|----|----|--|
| 2  |    | is, there is no dispersion of retirement. All units are retired when the age of the  |
| 3  |    | vintage reaches the amortization period. Each plant account or group of assets is    |
| 4  |    | assigned a fixed period which represents an anticipated life during which the asset  |
| 5  |    | will render service. For example, in amortization accounting, assets that have a 20- |
| 6  |    | year amortization period will be fully recovered after 20 years of service and taken |
| 7  |    | off EKPC's books, but not necessarily removed from service. In contrast, assets      |
| 8  |    | that are taken out of service before 20 years remain on the books until the          |
| 9  |    | amortization period for that vintage has expired.                                    |
| 10 | Q. | AMORTIZATION ACCOUNTING IS BEING IMPLEMENTED FOR                                     |
| 11 |    | WHICH PLANT ACCOUNTS?  |
| 12 | A. | Amortization accounting is only appropriate for certain General Plant accounts.      |
| 13 |    | These accounts are 391.0, 391.1, 393.0, 394.0, 395.0, 397.0, 397.1 and 398.0 for     |
| 14 |    | General Plant which represents approximately two percent of depreciable plant.       |
| 15 | Q. | PLEASE USE AN EXAMPLE TO ILLUSTRATE THE DEVELOPMENT                                  |
| 16 |    | OF THE ANNUAL DEPRECIATION ACCRUAL RATE FOR A  |
| 17 |    | PARTICULAR GROUP OF PROPERTY IN YOUR DEPRECIATION                                    |
| 18 |    | STUDY.   |
| 19 | A. | I will use Account 353.0, Station Equipment, as an example because it is one of the  |
| 20 |    | largest depreciable groups.  |
| 21 |    | The retirement rate method was used to analyze the survivor characteristics          |
| 22 |    | of this property group. Aged plant accounting data were compiled from 1984           |
| 23 |    | through 2019 and analyzed in periods that best represent the overall service life of |

this property. The life tables for the 1984-2019 and 2005-2019 experience bands are presented in the depreciation study on pages VII-38 through VII-41. Each life table displays the retirement and surviving ratios of the aged plant data exposed to retirement by age interval. For example, page VII-38 of Exhibit JJS-1, shows \$261,637 retired during age interval 0.5-1.5 with \$241,177,991 exposed to retirement at the beginning of the interval. Consequently, the retirement ratio is 0.0011 (\$261,637/\$241,177,991) and the survivor ratio is 0.9989 (1-0.0011). The life tables, or original survivor curves, are plotted along with the estimated smooth survivor curve, the 60-R2, on page VII-37 of Exhibit JJS-1.

The net salvage percent is presented on page VIII-15. The percentage is based on the result of annual gross salvage minus the cost to remove plant assets as compared to the original cost of plant retired during the period 2005 through 2019. The 15-year period experienced \$7,648,622 (\$460,576 - \$8,109,198) in net salvage for \$13,595,581 plant retired. The result is negative net salvage of 56 percent (\$7,648,622/\$13,595,581). Recent trends have shown indications of negative 27 percent. The industry ranges are negative 5 to negative 25 percent. Therefore, it was determined that based on historical indications, industry ranges and EKPC expectations, that negative 25 percent was the most appropriate estimate.

My calculation of the annual depreciation related to original cost of electric utility plant at December 31, 2019 for Account 353.0 is presented on pages IX-53 and IX-54 of Exhibit JJS-1. The calculation is based on the 60-R2 survivor curve, 25% negative net salvage, the attained age, and the allocated book reserve. The tabulation sets forth the installation year, the original cost, calculated accrued

- depreciation, allocated book reserve, future accruals, remaining life and annual accrual. These totals are brought forward to Table 1 on page VI-7.
- 3 Q. ARE THERE OTHER SPECIAL RECOVERY AMOUNTS THAT WERE
- 4 INCLUDED IN THE STUDY?
- Yes. There is a special recovery amount for the unrecovered reserve amortization 5 A. 6 established for certain general plant accounts. In order to achieve a more stable accrual for general and common plant accounts in the future, I have recommended 7 a ten-year amortization to adjust unrecovered reserve. This approach will achieve 8 9 consistent amortization rates for existing assets as well as future assets. The reserve for each of these accounts is segregated into two components. The first component 10 is the amount required to achieve the proper rate for the amortization period. The 11 remaining amount, which could be negative, is amortized over 10 years separately 12 from the assets. 13

#### III. CONCLUSION

- 14 Q. WAS EXHIBIT JJS-1 PREPARED UNDER YOUR DIRECTION AND
  15 CONTROL?
- 16 A. Yes.
- 17 O. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?
- 18 A. Yes.

## **2019 DEPRECIATION STUDY**

CALCULATED ANNUAL DEPRECIATION ACCRUALS RELATED TO ELECTRIC PLANT AS OF DECEMBER 31, 2019

East Kentucky Power Cooperative, Inc. 4775 Lexington Road Winchester. KY 40392

Attention Ms. Michelle K. Carpenter, CPA

Controller

Ladies and Gentlemen:

Pursuant to your request, we have conducted a depreciation study related to the electric plant of East Kentucky Power Cooperative, Inc. as of December 31, 2019. The attached report presents a description of the methods used in the estimation of depreciation, the summary of annual depreciation accrual rates, the statistical support for the life and net salvage estimates and the detailed tabulations of annual and accrued depreciation.

Respectfully submitted,

GANNETT FLEMING VALUATION AND RATE CONSULTANTS, LLC

#### EAST KENTUCKY POWER COOPERATIVE, INC.

#### **DEPRECIATION STUDY**

#### **EXECUTIVE SUMMARY**

Pursuant to East Kentucky Power Cooperative, Inc.'s ("EKPC" or "Company") request, Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") conducted a depreciation study related to the electric plant as of December 31, 2019. The purpose of this study was to determine the annual depreciation accrual rates and amounts for book and ratemaking purposes.

The depreciation rates are based on the straight line method using the average service life ("ASL") procedure and were applied on a remaining life basis. The calculations were based on attained ages and estimated average service life and forecasted net salvage characteristics for each depreciable group of assets.

EKPC's accounting policy has not changed since the last depreciation study was prepared. However, there have been changes in plans of some generating assets since the most recent study as well as additions of capital investment in all plant categories. Some service lives for transmission and distribution plant have become slightly longer, however, the primary change has been the utilization of appropriate net salvage percentages for many accounts including a component of terminal net salvage for generating facilities.

Gannett Fleming recommends the calculated annual depreciation accrual rates set forth herein apply specifically to electric plant in service as of December 31, 2019 as summarized by Table 1 of the study. Supporting analysis and calculations are provided within the study.

The study results set forth an annual depreciation expense of \$129.1 million when applied to depreciable plant balances as of December 31, 2019. The results are summarized at the functional level as follows:

#### SUMMARY OF ORIGINAL COST, ACCRUAL RATES AND AMOUNTS

| FUNCTION                           | ORIGINAL COST<br>AS OF<br>DECEMBER 31, 2019 | PROPOSED<br>RATE | PROPOSED<br>EXPENSE  |
|------------------------------------|---|------------------|----------------------|
| Electric Plant                     |   |                  |                      |
| Steam Production Plant             | \$ 2,426,607,851.36                         | 3.55             | \$ 86,108,150        |

### PART I. INTRODUCTION

# EAST KENTUCKY POWER COOPERATIVE, INC. DEPRECIATION STUDY

#### PART I. INTRODUCTION

#### SCOPE

This report sets forth the results of the depreciation study for East Kentucky Power Cooperative, Inc. ("Company"), to determine the annual depreciation accrual rates and amounts for book purposes applicable to the original cost of electric plant as of December 31, 2019. The rates and amounts are based on the straight line remaining life method of depreciation. This report also describes the concepts, methods and judgments which underlie the recommended annual depreciation accrual rates related to electric plant in service as of December 31, 2019.

The service life and net salvage estimates resulting from the study were based on informed judgment which incorporated analyses of historical plant retirement data as recorded through 2019, a review of Company practice and outlook as they relate to plant operation and retirement, and consideration of current practice in the electric industry, including knowledge of service lives and net salvage estimates used for other electric companies.

#### **PLAN OF REPORT**

Part I, Introduction, contains statements with respect to the plan of the report, and the basis of the study. Part II, Estimation of Survivor Curves, presents descriptions of the considerations and the methods used in the service life and net salvage studies. Part III, Service Life Considerations, presents the factors and judgment utilized in the average service life analysis. Part IV, Net Salvage Considerations, presents the judgment utilized for the net salvage study. Part V, Calculation of Annual and Accrued Depreciation, describes the procedures used in the calculation of group depreciation. Part VI, Results

of Study, presents summaries by depreciable group of annual depreciation accrual rates and amounts as well as composite remaining lives. Part VII, Service Life Statistics, presents the statistical analysis of service life estimates, Part VIII, Net Salvage Statistics, sets forth the statistical indications of net salvage percents, and Part IX, Detailed Depreciation Calculations, presents the detailed tabulations of annual depreciation.

#### **BASIS OF THE STUDY**

#### **Depreciation**

Depreciation, in public utility regulation, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among causes to be given consideration are wear and tear, deterioration, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and the requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs, less net salvage, over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing electric utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

For most accounts, the annual depreciation was calculated by the straight line method using the average service life procedure and the remaining life basis. For certain General Plant accounts, the annual depreciation is based on amortization accounting.

Both types of calculations were based on original cost, attained ages, and estimates of service lives and net salvage.

The straight line method, average service life procedure is a commonly used depreciation calculation procedure that has been accepted in Kentucky. Amortization accounting is used for certain General Plant accounts because of the disproportionate plant accounting effort required when compared to the minimal original cost of the large number of items in these accounts. An explanation of the calculation of annual and accrued amortization is presented beginning on page V-4 of the report.

#### Service Life and Net Salvage Estimates

The service life and net salvage estimates used in the depreciation and amortization calculations were based on informed judgment which incorporated a review of management's plans, policies and outlook, a general knowledge of the electric utility industry, and comparisons of the service life and net salvage estimates from our studies of other electric utilities. The use of survivor curves to reflect the expected dispersion of retirement provides a consistent method of estimating depreciation for electric plant. Iowa type survivor curves were used to depict the estimated survivor curves for the plant accounts not subject to amortization accounting.

The procedure for estimating service lives consisted of compiling historical data for the plant accounts or depreciable groups, analyzing this history through the use of widely accepted techniques, and forecasting the survivor characteristics for each depreciable group on the basis of interpretations of the historical data analyses and the probable future. The combination of the historical experience and the estimated future yielded estimated survivor curves from which the average service lives were derived.

# PART II. ESTIMATION OF SURVIVOR CURVES

#### PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

#### **SURVIVOR CURVES**

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of lowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

#### **Iowa Type Curves**

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the lowa type curves. There are four families in the lowa system, labeled in accordance with the location of the modes of the retirements in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family.

The lowa curves were developed at the lowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

Exhibit JJS-1 age 17 of 245

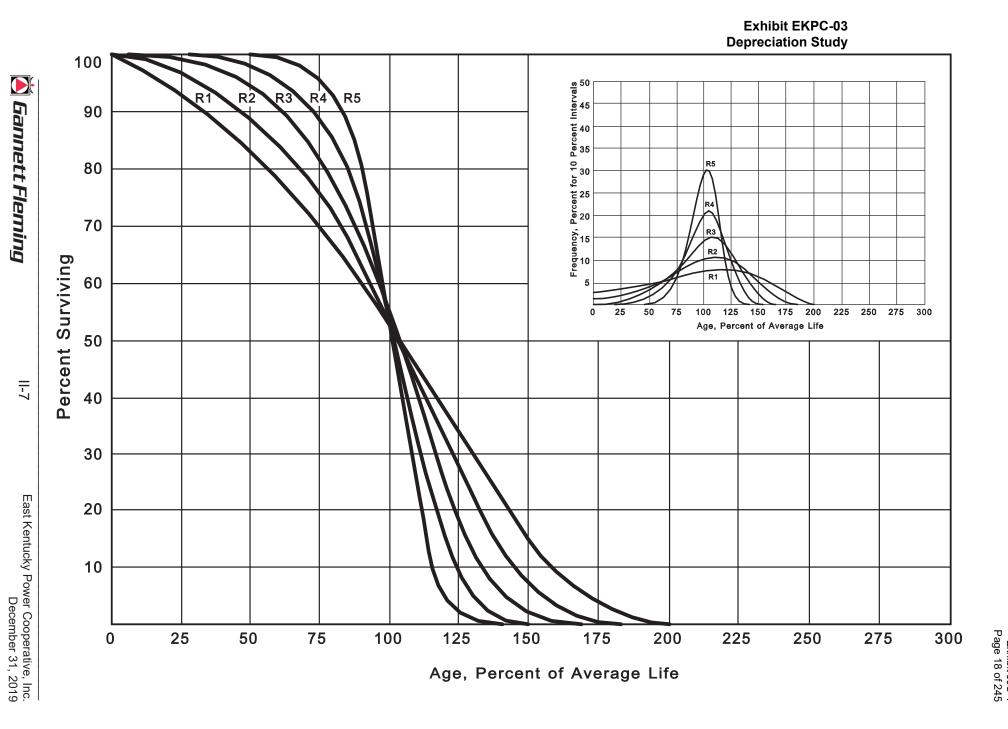

Figure 4. Right Modal or "R" lowa Type Survivor Curves

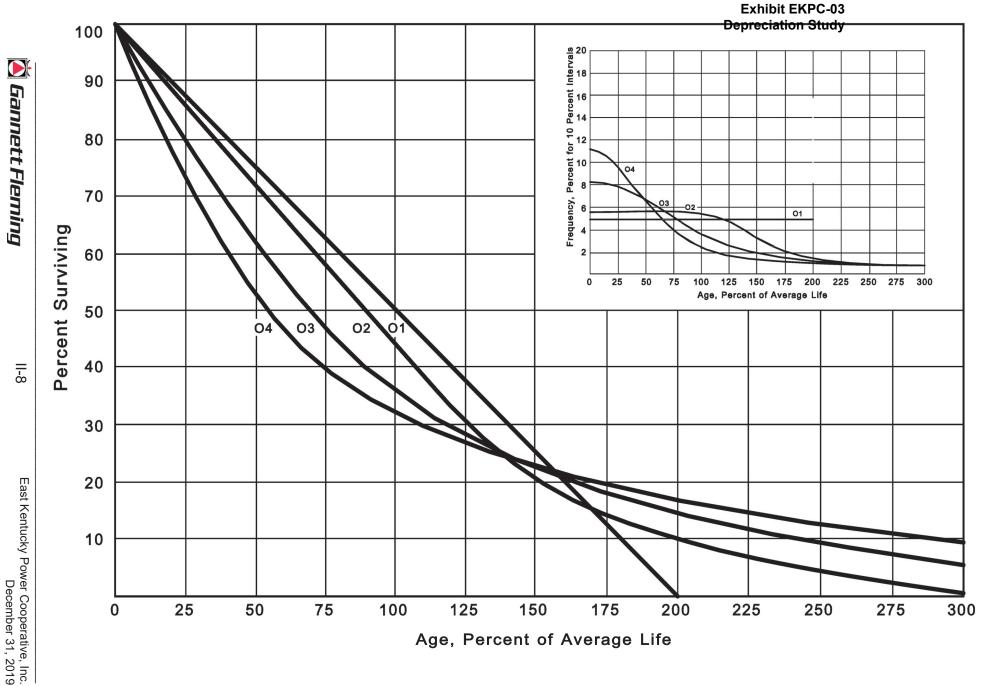

Figure 5. Origin Modal or "O" lowa Type Survivor Curves

Page 19 of 245

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation." In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

#### **Retirement Rate Method of Analysis**

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements," Engineering Valuation and Depreciation, and "Depreciation Systems."

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

#### <u>Schedules of Annual Transactions in Plant Records</u>

The property group used to illustrate the retirement rate method is observed for the experience band 2010-2019 during which there were placements during the years 2005-2019. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, \$10,000 of the dollars invested in 2005 were retired in 2010. The \$10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of \$143,000 retired for age interval  $4\frac{1}{2}$ - $5\frac{1}{2}$  is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2010 retirements of 2005 installations and ending with the 2019 retirements of the 2014 installations. Thus, the total amount of 143 for age interval  $4\frac{1}{2}$ - $5\frac{1}{2}$  equals the sum of:

$$10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20$$
.

<sup>&</sup>lt;sup>a</sup> Transfer Affecting Exposures at Beginning of Year

Parentheses Denote Credit Amount.

<sup>&</sup>lt;sup>b</sup> Transfer Affecting Exposures at End of Year

<sup>&</sup>lt;sup>c</sup> Sale with Continued Use

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

#### **Schedule of Plant Exposed to Retirement**

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2010 through 2019 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2015 are calculated in the following manner:

| Exposures at age 0 = amount of addition              | = \$750,000   |
|--|---------------|
| Exposures at age $\frac{1}{2}$ = \$750,000 - \$8,000 | = \$742,000   |
| Exposures at age 1½ = \$742,000 - \$18,000           | = \$724,000   |
| Exposures at age 2½ = \$724,000 - \$20,000 - \$19,00 | 0 = \$685,000 |
| Exposures at age 3½ = \$685,000 - \$22,000           | = \$663,000   |

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT JANUARY 1 OF EACH YEAR 2010-2019 SUMMARIZED BY AGE INTERVAL

<sup>a</sup>Additions during the year

For the entire experience band 2010-2019, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval  $4\frac{1}{2}-5\frac{1}{2}$ , is obtained by summing:

#### **Original Life Table**

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½ 88.15 = Exposures at age 4½ = 3.789,000Retirements from age  $4\frac{1}{2}$  to  $5\frac{1}{2}$ 143.000 Retirement Ratio =  $143,000 \div 3,789,000 = 0.0377$ Survivor Ratio = 1.000 -0.0377 = 0.9623Percent surviving at age 5½ = (88.15) x (0.9623) =84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

# SCHEDULE 4. ORIGINAL LIFE TABLE CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2010-2019

Placement Band 2005-2019

(Exposure and Retirement Amounts are in Thousands of Dollars)

| Total        | <u>44,780</u> | <u>1,606</u> |            |          |              |

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.

Column 3 from Schedule 1, Column 12, Retirements for Each Year.

Column 4 = Column 3 Divided by Column 2.

Column 5 = 1.0000 Minus Column 4.

Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

#### **Smoothing the Original Survivor Curve**

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The lowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the lowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Table 4 is compared with the L, S, and R lowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 lowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

#### **FIELD TRIPS**

In order to be familiar with the operation of the Company and observe representative portions of the plant, field trips have been conducted in past studies with a virtual tour of some locations during this study. These field trips and meetings aid in the general understanding of the plant and provide information related the reasons for past retirements and expected future causes of retirement. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

The following is a list of the locations visited during the most recent field trips.

#### **SERVICE LIFE ANALYSIS**

The service life estimates were based on informed judgment which considered a number of factors. The primary factors were the statistical analyses of data; current Company policies and outlook as determined during conversations with management; and the survivor curve estimates from previous studies of this company and other electric companies.

For many of the plant accounts and subaccounts for which survivor curves were estimated, the statistical analyses using the retirement rate method resulted in good to excellent indications of the survivor patterns experienced. These accounts represent 76 percent of depreciable plant. Generally, the information external to the statistics led to little or no significant departure from the indicated survivor curves for the accounts listed below. The statistical support for the service life estimates is presented in the section beginning on page VII-2.

#### STEAM PRODUCTION PLANT

| 311 | Structures and Improvements         |
|-----|-------------------------------------|
| 312 | Boiler Plant Equipment              |
| 315 | Accessory Electric Equipment        |
| 316 | Miscellaneous Power Plant Equipment |

#### OTHER PRODUCTION PLANT

344 Generators

#### TRANSMISSION PLANT

### DISTRIBUTION PLANT

362 Station Equipment

362.1 Station Equipment - SCADA

### **GENERAL PLANT**

390 Structures and Improvements
392 Transportation Equipment
396 Power Operated Equipment

Account 353, Station Equipment, and Account 355, Poles and Fixtures are used to illustrate the manner in which the study was conducted for the groups in the preceding list. Account 353 represents 7 percent, and Account 355 represents 4 percent of the total depreciable plant. Aged plant accounting data have been compiled for the years 1984 through 2019. These data have been coded in the course of the Company's normal record keeping according to account or property group, type of transaction, year in which the transaction took place, and year in which the electric plant was placed in service. The retirements, other plant transactions, and plant additions were analyzed by the retirement rate method.

The survivor curve estimate for Account 353, Station Equipment, is the 60-R2 and is based on the statistical indication for the period 1984-2019 and 2005-2019. The 60-R2 is an excellent fit of the significant portion of the original survivor curve as set forth on page VII-37 consistent with management outlook for a continuation of historical experience, and at the upper end of the typical service life range of 40 to 60 years for transmission substation equipment.

The survivor curve estimate for Account 355, Poles and Fixtures, is based on the statistical indications for the period 1984-2019. The lowa 60-S2 is an excellent fit of the original survivor curve. The 60-year service life is within the typical service life range of 45 to 65 years for transmission poles. The 60-year life reflects the Company's continued

practices for replacing transmission poles and reflects the industry trend towards a longer life.

### <u>Life Span Estimates</u>

The life span technique was used for the Company's Power Production accounts. The life span procedure is appropriate for these accounts since many of the assets within the plant will be retired concurrently. Probable retirement dates were estimated for each generating facility and structure. Life spans for each Steam and Other Production Plant were the result of considering experienced life spans of similar generating units, the age of surviving units, general operating characteristics of the units, major refurbishing, and discussions with management personnel concerning the probable long-term outlook for the units.

The depreciable life span estimates for steam, base-load units are 40 to 60 years. The typical range of life spans for such units in the past has been 50 to 65 years, however, in recent years the life spans have been 40 to 50 years. This life span represents the expected depreciable life of the facility under its current configuration. Future capital expenditures can extend a facility's depreciable life, however, such changes to depreciable life would not be prudent until the capital expenditures are actually put into plant in service. A life span of 35 to 40 years was estimated for the combustion turbines and landfill facilities. Life span estimates are typically 35 to 40 years for combustion turbines which are used primarily as peaking units and 30 to 35 years for landfill facilities. The life spans for solar facilities are typically 25 years.

The life span and probable retirement dates used for steam and other production plants are as follows:

| Donrociable Croup         | Major Voor in Convice | Depreciable      | <u>Depreciable</u> |
|---------------------------|-----------------------|------------------|--------------------|
| Depreciable Group         | Major Year in Service | <u>Life Date</u> | <u>Life Span</u>   |
| Steam Production Plant    |                       |                  |                    |
| Central Lab               | 1978                  | 2030             | 52                 |
| Cooper                    | 1966,1970             | 2030             | 60,64              |

| Smith Unit 2              | 1999                  | 2034             | 35                 |
| Smith Unit 3              | 1999                  | 2034             | 35                 |
| Smith Unit 4              | 2001                  | 2041             | 40                 |
| Smith Unit 5              | 2001                  | 2041             | 40                 |
| Smith Unit 6              | 2005                  | 2045             | 40                 |
| Smith Unit 7              | 2005                  | 2045             | 40                 |
| Smith Unit 9              | 2010                  | 2050             | 40                 |
| Smith Unit 10             | 2010                  | 2050             | 40                 |
| Cooperative Solar         | 2017                  | 2042             | 25                 |
| Green Valley Landfill     | 2003                  | 2038             | 35                 |
| Laurel Ridge Landfill     | 2003                  | 2038             | 35                 |
| Bavarian Landfill         | 2003                  | 2038             | 35                 |
| Pearl Hollow Landfill     | 2006                  | 2041             | 35                 |
| Pendleton County Landfill | 2007                  | 2042             | 35                 |
| Bluegrass Oldham Unit 1   | 2002*                 | 2042             | 40                 |
| Bluegrass Oldham Unit 2   | 2002*                 | 2042             | 40                 |
| Bluegrass Oldham Unit 3   | 2002*                 | 2042             | 40                 |

<sup>\*</sup>All units were acquired in 2015.

Similar studies were performed for the remaining plant accounts. Each of the judgments represented a consideration of statistical analyses of aged plant activity, management's outlook for the future, and the typical range of lives used by other electric companies.

The selected amortization periods for other General Plant accounts are described in the section "Calculated Annual and Accrued Amortization."

### PART IV. NET SALVAGE CONSIDERATIONS

### SALVAGE ANALYSIS

The estimates of net salvage by account were based in part on historical data compiled for the years 2005 through 2019. Cost of removal and salvage were expressed as percents of the original cost of plant retired, both on annual and three-year moving average bases. The most recent five-year average also was calculated for consideration. The net salvage estimates by account are expressed as a percent of the original cost of plant retired.

### **Net Salvage Considerations**

The estimates of future net salvage are expressed as percentages of surviving plant in service, i.e., all future retirements. In cases in which removal costs are expected to exceed salvage receipts, a negative net salvage percentage is estimated. The net salvage estimates were based on judgment which incorporated analyses of historical cost of removal and salvage data, expectations with respect to future removal requirements and markets for retired equipment and materials.

The analyses of historical cost of removal and salvage data are presented in the section titled "Net Salvage Statistics" for the plant accounts for which the net salvage estimate relied partially on those analyses.

Statistical analyses of historical data for the period 2005 through 2019 contributed toward the net salvage estimates for 17 plant accounts, representing 93 percent of the depreciable plant, as follows:

#### STEAM PRODUCTION PLANT

| 311 | Structures and Improvements         |
|-----|-------------------------------------|
| 312 | Boiler Plant Equipment              |
| 314 | Turbogenerator Units                |
| 315 | Accessory Electric Equipment        |
| 316 | Miscellaneous Power Plant Equipment |
|     |                                     |

### OTHER PRODUCTION PLANT

- 341 Structures and Improvements
- 343 Prime Movers
- 345 Accessory Electric Equipment
- 346 Miscellaneous Power Plant Equipment

#### TRANSMISSION PLANT

- 353 Station Equipment
- 353.1 Station Equipment Energy Control System
- 355 Poles and Fixtures
- 356 Overhead Conductors and Devices

### DISTRIBUTION PLANT

- 362 Station Equipment
- 362.1 Station Equipment SCADA

### GENERAL PLANT

- 392 Transportation Equipment
- 396 Power Operated Equipment

Account 353, Station Equipment, is used to illustrate the manner in which the study was conducted for the groups in the preceding list. Net salvage data for the period 2005 through 2019 were analyzed for this account. The data include cost of removal, gross salvage and net salvage amounts and each of these amounts is expressed as a percent of the original cost of regular retirements. Three-year moving averages for the 2005-2007 through 2017-2019 periods were computed to smooth the annual amounts.

Cost of removal was high during the entire period, however, particularly high in the early years as compared to retirements. The high removal cost in the early years related to practices during that time and the type of assets primarily being replaced. Since 2011, cost of removal as a percentage of retirements has been at a more common level. Cost of removal for the most recent five years averaged 31 percent.

Gross salvage has been recorded consistently since 2012. The most recent fiveyear average of 4 percent gross salvage reflects recent trends of salvage value for some equipment.

The net salvage percent based on the overall period 2005 through 2019 is 56 percent negative net salvage. The range of estimates made by other electric companies for station equipment is negative 10 to negative 25 percent. The net salvage estimate for station equipment is negative 25 percent, is at the upper end of the range of estimates for other electric companies, reflects the trend to lower cost of removal and reflects the overall experience for negative net salvage for the future.

The overall net salvage estimates for the Company's production facilities, for which the life span method is used, is based on estimates of both final net salvage and interim net salvage. Final(terminal) net salvage is the net salvage experienced at the end of a production plant's life span. Interim net salvage is the net salvage experienced for interim retirements that occur prior to the final retirement of the plant. The final net salvage estimates in the study were based on industry decommissioning analyses performed by various engineering organizations. The interim net salvage estimates were based in part on analysis of historical interim retirement and net salvage data. Based on informed judgment that incorporated these interim net salvage analyses for each plant account, an interim net salvage estimate of zero to negative 10 percent was used for each steam plant account, and zero to negative 51 percent estimate was used for all other production plant accounts.

The interim survivor curve estimates for each account and production facility were used to calculate the percentage of plant expected to be retired as interim retirements and final retirements. These are shown on Table 1 in the Net Salvage Statistics section on page VIII-2. These percentages were used to determine the weighted net salvage

estimate for each account and production facility based on the interim and final net salvage estimates. These calculations, as well as the estimated final net salvage amounts and interim net salvage percents, are shown on Table 2 of the Net Salvage Statistics. Table 3 sets forth the determination of the terminal net salvage amount for each location.

The net salvage percents for the remaining accounts were based on judgment incorporating estimates of previous studies of this and other electric utilities.

Generally, the net salvage estimates for the general plant accounts were zero percent, consistent with amortization accounting.

# PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

### PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

#### **GROUP DEPRECIATION PROCEDURES**

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally the items within a group do not have identical service lives, but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group. In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

### **Single Unit of Property**

The calculation of straight line depreciation for a single unit of property is straightforward. For example, if a \$1,000 unit of property attains an age of four years and has a life expectancy of six years, the annual accrual over the total life is:

$$\frac{\$1,000}{(4+6)}$$
 = \\$100 per year.

The accrued depreciation is:

$$$1,000\left(1-\frac{6}{10}\right)=$400.$$

### Remaining Life Annual Accruals

For the purpose of calculating remaining life accruals as of December 31, 2019, the depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation follow. The detailed calculations as of December 31, 2019, are set forth in the Results of Study section of the report.

### **Average Service Life Procedure**

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future depreciation accruals, if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life}{Average\ Service\ Life}.$$

#### CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization period and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is proposed for a number of accounts that represent numerous units of property, but a very small portion of depreciable electric plant in service. The accounts and their amortization periods are as follows:

|       | <u>Account</u>                                  | Amortization<br>Period,<br><u>Years</u> |
|-------|---|---|
| 391   | Office Furniture and Equipment                  | 20                                      |
| 391.1 | Office Furniture and Equipment - Peoplesoft     | 15                                      |

| 394   | Tools, Shop and Garage Equipment                | 20                                      |
| 395   | Laboratory Equipment                            | 20                                      |
| 397   | Communication Equipment                         | 15                                      |
| 397.1 | Communication Equipment – Energy Control System | 10                                      |
| 398   | Miscellaneous Equipment                         | 20                                      |

For the purpose of calculating annual amortization amounts as of December 31, 2019, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve

is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

### **PART VI. RESULTS OF STUDY**

### PART VI. RESULTS OF STUDY

### **QUALIFICATION OF RESULTS**

The calculated annual and accrued depreciation are the principal results of the study. Continued surveillance and periodic revisions are normally required to maintain continued use of appropriate annual depreciation accrual rates. An assumption that accrual rates can remain unchanged over a long period of time implies a disregard for the inherent variability in service lives and net salvage and for the change of the composition of property in service. The annual accrual rates were calculated in accordance with the straight line remaining life method of depreciation, using the average service life procedure based on estimates which reflect considerations of current historical evidence and expected future conditions.

The annual depreciation accrual rates are applicable specifically to the electric plant in service as of December 31, 2019. For most plant accounts, the application of such rates to future balances that reflect additions subsequent to December 31, 2019, is reasonable for a period of three to five years.

#### DESCRIPTION OF DETAILED TABULATIONS

Table 1 sets forth a summary of the results of the study as applied to the original cost of electric plant at December 31, 2019. These results are presented on pages VI-4 through VI-8 of this report. The schedule sets forth the original cost, the book depreciation reserve, future accruals, the calculated annual depreciation rate and amount, and the composite remaining life related to electric plant.

The service life estimates were based on judgment that incorporated statistical analysis of retirement data, discussions with management and consideration of estimates made for other electric utilities. The results of the statistical analysis of service life are

presented in the section beginning on page VII-2, within the supporting documents of this report.

For each depreciable group analyzed by the retirement rate method, a chart is provided depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. The survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the curve type designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. The titles of the chart indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The analyses of salvage data are presented in the section titled, "Net Salvage Statistics." The tabulations present annual cost of removal and salvage data, three-year moving averages and the most recent five-year average. Data are shown in dollars and as percentages of original costs retired.

The tables of the calculated annual depreciation applicable to depreciable assets as of December 31, 2019 are presented in account sequence starting on page IX-2 of the supporting documents. The tables indicate the estimated survivor curve and net salvage percent for the account and set forth, for each installation year, the original cost, the calculated accrued depreciation, the allocated book reserve, future accruals, the remaining life, and the calculated annual accrual amount.

LIFE SPAN PROCEDURE USED. CHRVE SHOWN IS INTERIM SURVIVOR CURVE.
 NEW ADDITIONS WILL UTILIZE A 10% DEPRECIATION RATE BASED ON A 10-SQ SURVIVOR CURVE AND 0% NET SALVAGE.
 10-YEAR AMORTIZATION OF RESERVE ADJUSTMENT RELATED TO IMPLEMENTATION OF AMORTIZATION ACCOUNTING.

## ORDER

On April 6, 2021, East Kentucky Power Cooperative (EKPC) filed an application,<sup>1</sup> pursuant to KRS 278.180, KRS 278.190, and 807 KAR 5:001, requesting a wholesale rate adjustment that supported an increase in revenue by \$48,983,937, but offered to limit the requested rate increase to \$43,000,000 due to economic conditions in EKPC's Owner-Members' service territories, with the difference being achieved through reduction of certain costs. EKPC also requested approval of four regulatory assets, relief for reporting requirements, and tariff changes. EKPC's last wholesale rate adjustment was approved in 2011.<sup>2</sup>

The Attorney General of the Commonwealth of Kentucky, by and through the Office of Rate Intervention (Attorney General), Nucor Steel Gallatin, LLC (Nucor), and AppHarvest Morehead Farm, LLC (AppHarvest) were granted intervention status. By

<sup>&</sup>lt;sup>1</sup> EKPC submitted its application on April 1, 2021. By letter dated April 5, 2021, EKPC was notified that its application was rejected for filing due to certain filing deficiencies. EKPC subsequently cured the deficiencies and the application was deemed filed as of April 6, 2021.

<sup>&</sup>lt;sup>2</sup> Case No. 2010-00167, Application of East Kentucky Power Cooperative, Inc. for General Adjustment of Electric Rates (Ky. PSC Jan. 14, 2011).

Order entered April 13, 2021, the Commission established a procedural schedule that provided for multiple rounds of discovery, intervenor testimony, and rebuttal testimony. The Commission suspended the proposed rates up to and including October 5, 2021.

On July 29, 2021, the parties filed a Stipulation and Settlement Agreement (Settlement) between the parties that settled all issues. In the Settlement, the parties, among other things, requested that the final Order be timely issued so that the proposed rates could go into effect for service rendered on and after October 1, 2021. A formal hearing was held on August 13–14, 2021. EKPC responded to two post-hearing data requests. EKPC, Attorney General, Nucor, and AppHarvest filed post-hearing briefs. This matter now stands submitted for a decision.

## LEGAL STANDARD

EKPC filed its application pursuant to KRS 278.180, KRS 278.190, and 807 KAR 5:001. The Commission's standard of review of a utility's request for a rate increase is well established. In accordance with statutory and case law, EKPC is allowed to charge its customers "only 'fair, just and reasonable rates.'" Further, EKPC bears the burden of proof to show that the proposed rate increase is just and reasonable, under KRS 278.190(3).

Although the parties agreed to a unanimous Settlement and the parties may represent a diverse range of customer interests, the Commission cannot defer to the parties as to what constitutes fair, just and reasonable rates. The Commission must review the record, including the Settlement, and apply the Commission's expertise to make an independent decision as to the level of rates that should be approved.

<sup>&</sup>lt;sup>3</sup> KRS 278.030; and *Pub. Serv. Comm'n v. Com. ex rel. Conway*, 324 S.W.3d 373, 377 (Ky. 2010).

# **SETTLEMENT**

The Settlement, attached to this Order as Appendix A, reflects the agreement of the parties concerning all issues raised in the case. The major provisions of the Settlement as they relate to EKPC's revenues and rates are as follows:

 EKPC's revenues should be increased by \$38,343,000 with rates to be effective October 1, 2021, or when a final order is issued, whichever is later. The adjustments the parties agreed upon and resulted in the settled amount is shown in Exhibit A of the settlement<sup>4</sup> and is restated in the table below:

|   | <br>Settlement<br>Agreement   |
|---|-------------------------------|
| EKPC Requested Increase   |                               |
| Required Revenue Increase Based On Original Filing                      | \$<br>48,983,937              |
| Effects on Increase from Expense Adjustments                            |                               |
| Reflect Normalization of Generation Maintenance Expense                 | (6,591,884)                   |
| Reduce Amortization Period for General Plant Reserve Surplus to 5 Years | (1,914,124)                   |
| Reduce Interest Expense on Environmental CWIP Recovered Through ES      | (2,315,000)                   |
| Total Adjustments to Company's Proposed TY Base RR                      | <br>(10,821,008)              |
| Adjusted Increase to Base Rates   | \$<br>38,162,929 <sup>5</sup> |

• The revenue requirement would be allocated to the rate cases as follows:

| Rate Class             | Increase in Dollars | Percentage |
|------------------------|---------------------|------------|
|                        |                     | Increase   |
| Rate E                 | \$34,314,065        | 5.20%      |
| Rate B                 | \$1,548,673         | 2.60%      |
| Rate C                 | \$452,238           | 2.60%      |
| Rate G                 | \$663,320           | 2.60%      |
| Contract Steam         | \$278,674           | 2.60%      |
| Large Special Contract | \$1,086,030         | 2.60%      |
| Pumping Stations       | \$0                 | 0.00%      |
| Total                  | \$38,343,000        |            |

<sup>&</sup>lt;sup>4</sup> Settlement (filed Jul. 29, 2021), Exhibit A at 12.

<sup>&</sup>lt;sup>5</sup> The adjustments included in Exhibit A of the Settlement did not result in the exact required increase of \$38,343,000 as stated in the total, and the Settlement did not address this topic.

- EKPC would be authorized to earn a 1.50 Times Interest Earned Ratio (TIER) for base rates
- EKPC would be authorized to earn a 1.475 TIER for its environmental surcharge (ES). All changes for depreciation rates, interest expense for construction work in progress (CWIP), and TIER would first be reflected in the monthly ES filing on November 19, 2021, for expense month October 2021.
- EKPC will record a generation maintenance regulatory asset or regulatory liability for 75 percent of the actual generation maintenance expense amounts in excess of or less than the \$81,067,000 in base rates, beginning with calendar year 2022.
- The parties agreed to an earnings mechanism that would return excess margins to customers in the form of a bill credit if EKPC achieves a per book margin in excess of 1.40 TIER in any calendar year.
- EKPC's depreciation study, depreciation rates, and inclusion of interim retirement and terminal net salvage should be approved as filed.
- Agreement that the Commission should approve amortization of four regulatory assets as filed in the application.
- Agreement that the Commission should grant each of EKPC's requests for relief from certain filing requirements.

Summaries of each issue and the findings of the Commission are explained in detail below.

# TEST PERIOD

EKPC proposed the 12-month period ending December 31, 2019, as the historic test year for determining the reasonableness of its proposed rates, as provided in 807 KAR 5:001, Section 16(4)–(5). None of the intervenors contested the use of this period as the test period.

The Commission finds that it is reasonable to use the 12-month period ending December 31, 2019, as the test period in this case because, due to the timing of EKPC's filing, the 12-month period ending December 31, 2019 is a feasible period to use for setting rates. Further, except for the adjustments approved in this Order, the revenues and expenses incurred during that period are neither unusual nor extraordinary. In using this historic test period, the Commission gave full consideration to appropriate known and measurable changes.

## TIER

EKPC requested the Commission authorize a 1.50 TIER to allow it to maintain a target Debt Service Coverage (DSC) of 1.35, which allows for compliance with EKPC's lenders, support EKPC's credit ratings, and maintains financial strength. The Settlement adopts EKPC's request, with the exception of the TIER on EKPC's ES, which the Settlement sets at 1.475 TIER. The Commission finds that the TIER calculation for EKPC's base rates should be set to 1.50, which is a reasonable level to ensure EKPC retains its ability to meet its debt covenants and maintain its equity and cash flow to ensure financial stability in case of unforeseen circumstances. The Commission also finds that the reduced TIER of 1.475 for its ES is reasonable, because through the true-up mechanism from ES, the revenue generated by ES is generally considered more stable than revenue generated through base rates. Therefore, the Commission finds that the provisions of the Settlement regarding TIER are reasonable and should be approved.

<sup>&</sup>lt;sup>6</sup> Application, Exhibit 17, Direct Testimony of Thomas J. Stachnik (filed Apr. 1, 2021) at 23.

<sup>&</sup>lt;sup>7</sup> Settlement at 3.

## REVENUE REQUIREMENT ADJUSTMENTS

# Operating Expense Adjustments

Normalize Generation Maintenance. In its application, EKPC included test-year expenses of \$87,647,565 associated with major generation outage maintenance work.<sup>8</sup> The Attorney General/Nucor's witness, Lane Kollen, recommended that an adjustment be made to reduce the major generation outage expense to a normalized level based upon the average of the past five years.<sup>9</sup> Citing the reduction of generation maintenance expense to \$76,334,481 in 2020, <sup>10</sup> Kollen stated that it is appropriate to normalize the expense because fluctuations occur due to the cyclical nature, timing, and scope of major generation outages and expenses.<sup>11</sup> As an example, EKPC's witness Isaac Scott argued that the reduction in generation maintenance expense occurred in 2020 because the COVID-19 pandemic forced the rescheduling of generation outages that would otherwise have taken place.<sup>12</sup> In addition, Scott stated that, as EKPC's generating fleet ages, increasing levels of maintenance expense will likely occur, and therefore a mix of historic and forecasted expense levels should be used in the event that a normalization adjustment is made.<sup>13</sup>

<sup>&</sup>lt;sup>8</sup> EKPC's Response to Attorney General/Nucor's First Request for Information (Attorney General/Nucor's First Request) (filed May 28, 2021), Items 2–19.

<sup>&</sup>lt;sup>9</sup> Direct Testimony of Lane Kollen (Kollen Direct Testimony) (filed June 29, 2021) at 19.

<sup>&</sup>lt;sup>10</sup> Kollen Direct Testimony at 18.

<sup>&</sup>lt;sup>11</sup> *Id.* 

<sup>&</sup>lt;sup>12</sup> Rebuttal Testimony of Isaac S. Scott (Scott Rebuttal Testimony) (filed July 27, 2021) at 11.

<sup>&</sup>lt;sup>13</sup> Scott Rebuttal Testimony at 12.

In the Settlement, the parties agreed to adopt the adjustment proposed by Lane Kollen, and normalize the generation maintenance expense over the five-year period from 2015 to 2019, resulting in a reduction in revenue of \$6,591,883. 14 In addition, the Settlement included the creation of a mechanism by which EKPC will track its actual generation maintenance expenses and compare them to the normalized total of \$81,067,839 million. In years when the actual expense exceeds the normalized total, EKPC will record a regulatory asset for 75 percent of the difference. 15 In years when the actual expense is less than the normalized total, EKPC will record a regulatory liability for 75 percent of the difference. 16 The Settlement provides that, in EKPC's next base rate case, the cumulative regulatory asset or liability will then be amortized and either recovered from or returned to EKPC's Owner-Members over a reasonable period. 17

For the reasons set forth above, the Commission finds that a normalization adjustment to generation maintenance expense is appropriate, and that the period proposed by Lane Kollen is also appropriate. The Commission further finds that the Settlement terms related to the regulatory asset or liability are reasonable for the above reasons, and therefore approves EKPC's regulatory accounting treatment accordingly.

<u>Plant Reserve Surplus</u>. In the application, EKPC proposed to reduce depreciation expense in the test period before gross up by \$(1,910,304) for a reserve adjustment for

<sup>&</sup>lt;sup>14</sup> Settlement at 3–4.

<sup>&</sup>lt;sup>15</sup> *Id*.

<sup>&</sup>lt;sup>16</sup> *Id*.

<sup>&</sup>lt;sup>17</sup> *Id.* 

amortization on general plant reserve surplus.<sup>18</sup> The amortization of the proposed adjustment was based on a ten-year period recommended by EKPC's depreciation consultant, John Spanos.<sup>19</sup> Mr. Spanos explained that this period would achieve consistent amortization rates for existing and future assets.<sup>20</sup> The Attorney General and Nucor recommended the amortization period on the reserve adjustment be adjusted to five years, and stated that the proposed amortization period was inordinately long and that any overrecovery should be returned expeditiously to customers in the context of a requested base rate increase.<sup>21</sup> In the Settlement, the parties agreed to adjust the revenue requirement based on the five-year amortization period as proposed by the Attorney General and Nucor. As a result, the total revenue required from base rates would be reduced by \$(1,914,124).

The Commission notes that while the argument that amortization periods should be in line with the average remaining lives of the amortization accounts is compelling, a period of ten years to return an overrecovery through base rates is excessive. Therefore, the Commission finds that the Settlement term regarding the plant reserve surplus is reasonable because a five-year amortization period is appropriate for the return of the general plant reserve surplus.

<sup>&</sup>lt;sup>18</sup> Application, Exhibit 13, Direct Testimony of Isaac S. Scott (Scott Direct Testimony) (filed Apr. 1, 2021), Exhibit ISS–1, Attachment 7, Workpaper 1.19, Depreciation Environmental Surcharge at 5.

<sup>&</sup>lt;sup>19</sup> Application, Exhibit 15, Direct Testimony of John J. Spanos (Spanos Direct Testimony) (filed Apr. 1, 2021) at 13–16.

<sup>&</sup>lt;sup>20</sup> Spanos Direct Testimony at 16.

<sup>&</sup>lt;sup>21</sup> Kollen Direct Testimony at 34–35.

ES CWIP Interest Expense. EKPC proposed to remove Interest Expense of \$(24,450,841)<sup>22</sup> from the test year for interest on long-term debt associated with projects that are being recovered through EKPC's ES mechanism. The Attorney General and Nucor recommended the Commission reduce the revenue requirement by \$8,550,602 to remove interest expenses and associated TIER that were tied to CWIP projects also being recovered through the ES mechanism, and argued that if these expenses were approved in base rates, double recovery would occur.<sup>23</sup> In Mr. Scott's rebuttal testimony, which supports the amounts agreed upon in the Settlement, he agreed that an adjustment to remove interest expense on long-term debt associated with the CWIP amounts included in the ES should be made, but disagreed with the methodology employed by Mr. Kollen that imputed the long-term debt supporting surcharge assets only to the CWIP balance in the ES.<sup>24</sup> Mr. Scott recalculated the reduction using the interest rates of the credit facility as of June 30, 2020 to the CWIP balance included in the ES. The result of Mr. Scott's recalculation was \$(2,317,925) after gross up.<sup>25</sup> This is consistent with the reduction agreed upon in the Settlement.

The Commission agrees that if no adjustment were made to reduce long-term interest expense related to the CWIP ES, then double recovery of interest expense would occur. The Commission concurs that the use of the interest rates of the credit facility as of June 20, 2020, is a reasonable method to determine the proper reduction to interest

 $<sup>^{22}</sup>$  Scott Direct Testimony, Exhibit ISS-1, Schedule 1.02, Adjustments to Remove Environmental Surcharge from Base Rates.

<sup>&</sup>lt;sup>24</sup> Scott Rebuttal Testimony at 18.

<sup>&</sup>lt;sup>25</sup> *Id*.

expense from base rates to be recovered through the ES. Therefore, the Commission finds the reduction of \$(2,315,000) to the revenue requirement as agreed upon in the Settlement is reasonable and should be approved.

Salaries, Wages, and Related Payroll Tax Expense. EKPC proposed to increase test-year salaries and wages and associated payroll taxes by \$4,261,906<sup>26</sup> and \$404,848,<sup>27</sup> respectively, to reflect 2020 staffing levels and merit increases awarded with an effective date of June 2020. EKPC calculated its proposed adjustment by normalizing its payroll period ending September 18, 2020, over 12 months.<sup>28</sup> The Attorney General and Nucor argued that the annualization of a single payroll period was not known and measurable and failed to reflect any offsetting savings in contractor expenses achieved after the end of the test year. The Settlement makes no adjustment to salaries and wages or corresponding payroll.

In response to Commission Staff's Second Post-Hearing Request for Information, EKPC provided its actual salaries and wages for July 1, 2020, through June 20, 2021, in the format originally presented in the application for EKPC's proposed salaries and wages adjustment. <sup>29</sup> Based on the information presented in the response, the Commission finds that while the method of normalizing a single payroll period is not conventional ratemaking, the pro forma amounts requested in the application accurately reflect, in all material respects, current and expected conditions with regard to salaries and wages for

<sup>&</sup>lt;sup>26</sup> Scott Direct Testimony, Exhibit ISS-1, Schedule 1.07, Adjustment to Normalize Wages and Salaries.

<sup>&</sup>lt;sup>27</sup> Scott Direct Testimony, Exhibit ISS-1, Schedule 1.08, Adjustment to Normalize Payroll Taxes.

<sup>&</sup>lt;sup>28</sup> Scott Direct Testimony at 19–20.

<sup>&</sup>lt;sup>29</sup> EKPC's Response to Commission Staff's Second Post-Hearing Request for Information (filed Sept. 1, 2021), Item 1.

EKPC, and therefore are known and measurable. For this reason, the Commission finds that no further adjustment is required.

Other Post-Employment Benefits (OPEB). EKPC proposed to include test-year expenses of \$3,280,634 associated with OPEB.<sup>30</sup> EKPC proposed an adjustment to reduce retiree medical insurance by \$1,190,183 to reflect its estimate of the savings associated with moving away from a self-funded plan to a Medicare Advantage plan effective January 1, 2020.<sup>31</sup> The Attorney General and Nucor recommended that an additional adjustment be made to further reduce OPEB by \$1,034,583 to reduce the expense to EKPC's 2020 actual expense of \$1,057,933.<sup>32</sup> In rebuttal testimony, Mr. Scott proposed that the Commission reject Lane Kollen's proposed adjustment because he believes that going 12 months beyond the end of the test year is a violation of the matching principle.<sup>33</sup>

In the Settlement, the parties agreed to adopt the expense level originally proposed by EKPC. The Commission finds that the Settlement term regarding OPEB is reasonable because it reflects a fair middle ground between the historically low actual expense incurred in 2020 and the five-year average based on EKPC's post-hearing data response.<sup>34</sup>

<sup>&</sup>lt;sup>30</sup> EKPC's Response to Attorney General/Nucor's First Request, Item 57.

<sup>&</sup>lt;sup>31</sup> Scott Direct Testimony, Exhibit ISS-1, Schedule 1.11, Adjustment to Retiree Medical Insurance Expense.

<sup>&</sup>lt;sup>32</sup> Kollen Direct Testimony at 13.

<sup>&</sup>lt;sup>33</sup> Scott Rebuttal Testimony at 10.

<sup>&</sup>lt;sup>34</sup> EKPC's Response to Commission Staff's First Post-Hearing Request for Information (filed Aug. 23, 2021), Item 3.

Rate Case Expense. EKPC proposed to increase its test year expenses \$320,000 for a three-year amortization of estimated expenses of \$960,000, which would be incurred in relation to this proceeding. On August 18, 2021, EKPC filed an updated report that it expended \$742,494 for rate case expenses as of August 17, 2021, which included legal services, consultants' fees for a depreciation study, consultants' fees for EKPC's cost of service study and cooperation with consultants in the owner-member flow through proceedings, legal notices, and miscellaneous supplies. 36

The Commission finds that, based on the summaries provided throughout the pendency of this case and a review of the supporting invoices, the amount detailed in EKPC's August 18, 2021 filing fairly represents the total costs to prepare and fully litigate this proceeding. Therefore, the Commission finds that rate case expense should be reduced to \$724,494 amortized over three years, resulting in a test-year amortization expense of \$241,498, a reduction of \$78,502.

#### Request for Amortization of Regulatory Assets

The parties agreed that the Commission should approve amortization of four regulatory assets as filed in the application, which are set forth below:

Amortization of Cancelled Smith 1 Regulatory Asset. EKPC proposed to amortize and recover, for ratemaking purposes, its Cancelled Smith 1 regulatory asset and proposed to increase test-year amortization expense by \$1,911,276, which it stated is

<sup>&</sup>lt;sup>35</sup> Scott Direct Testimony at 31 and Exhibit ISS-1, Schedule 1.27, Amortize Rate Case Expenses.

<sup>&</sup>lt;sup>36</sup> EKPC's Supplemental Response to Staff's First Request (filed Aug. 18, 2021), Item 39.c.

consistent with the stipulation agreement in Case No. 2015-00358 (2015 Settlement).<sup>37</sup> The adjustment was calculated based on the difference between the actual test-year amortization and an adjusted regulatory asset balance re-amortized over the remaining 63 months of the specified 120 months beginning January 1, 2017, set by the 2015 Settlement.<sup>38</sup> The Attorney General and Nucor proposed to decrease test-year amortization by \$(3,493,669), based on the interpretation of the 2015 Settlement that the amortization period that remained for ratemaking purposes was 84 months, based on a 120 month amortization period and 36 months of recorded amortization.<sup>39</sup>

The Commission concludes that the 2015 Settlement is clear that the amortization period for the regulatory asset for ratemaking purposes was set for 10 years beginning January 1, 2017. However, EKPC's proposal to increase test-year expenses based on the adjusted balance of the regulatory asset as of December 31, 2019, is not appropriate. For accounting purposes, EKPC is amortizing the regulatory asset from January 1, 2017 until present. In order for the Commission's Order approving the 2015 Settlement to comply with accounting standards that require realization of revenue that offsets the amortization expense of a regulatory asset, <sup>40</sup> EKPC had to "realize certain PJM Capacity Market Benefits," <sup>41</sup> alongside EKPC's amortization expense beginning January 1, 2017

<sup>&</sup>lt;sup>37</sup> Case No. 2015-00358, *Application of East Kentucky Power Cooperative, Inc. for Deviation from Obligation Resulting from Case No. 2012-00169* (filed Aug. 8, 2016), Exhibit A, Stipulation and Recommendation. *See also* Scott Direct Testimony at 26.

<sup>&</sup>lt;sup>38</sup> Scott Direct Testimony, Exhibit ISS-1, Schedule 1.20, Adjustment to Amortize Smith 1 Regulatory Asset at 1.

<sup>&</sup>lt;sup>39</sup> Kollen Direct Testimony at 36–38.

<sup>&</sup>lt;sup>40</sup> ASC 980-340-25-1.

<sup>&</sup>lt;sup>41</sup> 2015 Settlement at 3.

and the "Net PJM Capacity Market Benefit[s] . . . impact[ed] EKPC's margins in the appropriate accounting periods."42 However, the 2015 Settlement noted that for the year in which EKPC's next rate case is brought, the 2015 Settlement would permit EKPC to "request an amortization adjustment" for the test year using both the actual results of EKPC's mitigation and salvage efforts during the period of January 1, 2017, through the end of the test period in the rate case, and the net PJM Capacity Market benefits starting with the 2016-2017 PJM Delivery year and concluding at the end of the test year, or the end of calendar year 2019.<sup>43</sup> The 2015 Settlement further clarifies that the requested amortization adjustment based on the 2019 PJM Capacity Market Benefit should only be reflected if the full Net PJM Capacity Market Costs are known and measurable.<sup>44</sup> If the 2019 PJM Capacity Market Costs are not known and measurable at the time of the filing of the rate case, then EKPC would request the amortization adjustment that reflects only the Net PJM Capacity Market Benefit realized through the end of the test period included in the rate case. 45 The Commission recognizes EKPC's requestin its pending application as an attempt to comply with the terms of the 2015 Settlement. However, the Commission is not bound to approve EKPC's request simply because it was outlined in the 2015 settlement that EKPC was to make such a request in its next rate proceeding. Further, even though the 2015 Settlement does not explicitly discuss the issue of timing, the Commission believes that the terms of the 2015 Settlement were originally agreed to on

<sup>&</sup>lt;sup>42</sup> *Id.* at 4.

<sup>&</sup>lt;sup>43</sup> *Id.* at 5–6.

<sup>&</sup>lt;sup>44</sup> *Id.* at 6.

<sup>&</sup>lt;sup>45</sup> *Id.* 

the idea that EKPC would file its next base rate case prior to the end of calendar year 2019. Regardless, if the Commission were to approve the adjustment as proposed by EKPC, the resulting adjustment would allow EKPC to retroactively collect from customers the amortization already expensed for accounting purposes on EKPC's books and creates a mismatch of revenue collected and the actual expense incurred. The balance of a regulatory asset is not reduced by the corresponding revenue collected by EKPC, but rather, by realizing the associated amortization expense. To adjust the going forward amortization expense included in rates for the shortfall of EKPC's offsetting revenues would be a violation of the accounting standard that allows the creation of a regulatory asset only when it is probable that future revenues in an amount approximately equal to the capitalized cost will result from inclusion of that cost in allowable costs for ratemaking purposes.<sup>46</sup> In short, because the amortization period began on January 1, 2017, the amortization expense should not be adjusted to recapture amortization expense already incurred or the shortfall of EKPC's offsetting revenues. Therefore, the Commission finds that EKPC's request to adjust its test-year amortization expense in its application is unreasonable and should be denied. In the converse, the proposal by the Attorney General and Nucor is also not reasonable because the period set for the ten-year amortization is clearly stated to commence on January 1, 2017, and therefore should not be extended.

For the historical test period ending December 31, 2019, the Commission finds, for the reasons set forth above, that the reasonable amortization expense, for ratemaking purposes, are the amounts actually expensed in the test year. Therefore, the

<sup>&</sup>lt;sup>46</sup> ASC 980-340-25-1.

Commission finds that the agreed upon revenue requirement in the Settlement should be reduced by \$(1,915,099), which reflects the removal of the proposed pro forma adjustment made by EKPC, including gross up for the fees associated with the regulatory assessment.

Amortization of Dale Surcharge Projects 5 and 10. EKPC proposed to amortize and recover the Dale regulatory asset for Surcharge Projects 5 and 10, which are associated with EKPC's ES. In Case No. 2015-00302,<sup>47</sup> the Commission approved two regulatory assets for the 2015 retirement of Dale generation station: one for Dale assets recovered through base rates, and a second for Dale assets recovered through the ES. The Commission found that the ES-related regulatory asset should be deferred for potential recovery in EKPC's next base rate case, and that the decision would be made after fully examining the reasonableness of these costs in the context of the future rate case. EKPC proposed to amortize the \$749,484 regulatory asset balance over two years, which increases test-year amortization expense by \$374,742.<sup>48</sup>

Upon review of costs in the Dale Surcharge Projects 5 and 10, the Commission concludes that the costs are reasonable, and therefore finds that the proposed increase to amortization is reasonable and should be approved.

Amortization of Dale Station Asbestos Asset Retirement Obligations. EKPC requested to amortize its established regulatory asset for depreciation and accretion expenses associated with Dale generating station asbestos abatement and ash removal

-16-

<sup>&</sup>lt;sup>47</sup> Case No. 2015-00302, Application of East Kentucky Power Cooperative, Inc. for an Order Approving the Establishment of a Regulatory Asset for the Undepreciated Balance of the William C. Dale Generating Station (Ky. PSC Feb. 11, 2016).

<sup>&</sup>lt;sup>48</sup> Scott Direct Testimony, Exhibit ISS-1, Schedule 1.21, Adjustment to Amortize Dale Regulatory Asset for Surcharge Projects 5 and 10.

costs. EKPC stated that the Commission approved this asset in Case No. 2014-00432<sup>49</sup> and that EKPC has not previously requested recovery of this asset. EKPC explained that Dale was retired in 2015 and the asbestos abatement and ash removal costs have been settled, but the regulatory asset remains on EKPC's books. EKPC proposed to amortize the regulatory asset balance of \$1,360,551 over a two-year period, which increases test-year amortization expense by \$680,276.

Because the asbestos abatement and ash removal costs have been settled, the Commission finds the proposed increase to test-year amortization as described above is reasonable and should be approved.

Amortization of Spurlock 2019 Major Maintenance Expenses. EKPC requested to amortize 2019 major maintenance expenses at Spurlock generating station that EKPC recorded as a regulatory asset, which EKPC asserted is consistent with the Commission's December 20, 2019 Order in Case No. 2019-00146.<sup>50</sup> In that order, the Commission denied EKPC's request to establish regulatory asset(s) for present and future major maintenance expenses, and stated that the United States Department of Agriculture Rural Utilities Service (RUS) was the more appropriate regulatory authority to petition for departures from standard accounting practices.<sup>51</sup>

<sup>&</sup>lt;sup>49</sup> Case No. 2014-00432, Application of East Kentucky Power Cooperative, Inc. for an Order Approving the Establishment of Regulatory Assets for the Depreciation and Accretion Expenses Associated with Asset Retirement Obligations (Ky. PSC Mar. 6, 2015).

<sup>&</sup>lt;sup>50</sup> Case No. 2019-00146, Application of East Kentucky Power Cooperative, Inc. for an Order Approving the Establishment of Regulatory Assets for Present and Future Maintenance Expenses (Ky. PSC Dec. 20, 2019), Order.

<sup>&</sup>lt;sup>51</sup> *Id.* at 10.

EKPC explained that it subsequently received approval from the RUS on January 30, 2020, to record the regulatory asset with an eight-year amortization period.<sup>52</sup> EKPC explained that RUS advised EKPC to submit a request for specific projects rather than the broad authorizations that were requested in Case No. 2019-00146. EKPC established the regulatory asset balance of \$7,244,184 at the end of the test year with an eight-year amortization period.<sup>53</sup> No Intervenor in this proceeding objected to EKPC's request for amortization.

In the December 20, 2019 Order in Case No. 2019-00146, the Commission denied EKPC's request to record regulatory assets for minor units of property and major maintenance expense each year without explicit prior Commission approval. Instead, the Commission instructed EKPC that the wide-ranging departure from ordinary accounting rules that EKPC was proposing to endeavor on should be sought from RUS, noting that RUS was the more appropriate authority to address departures from Uniform System of Accounts (USoA) as RUS has procedures per 7 C.F.R. 1767.13 for such requests. The Commission concludes that the evidence presented in this case, including letters EKPC issued to RUS, indicate that EKPC went to RUS initially in good faith to request a departure from the USoA (for the request envisioned by the Commission), but when that request was denied, EKPC further requested RUS approve the recognition of a regulatory asset. RUS approved this recognition under the standards set by the USoA. Upon RUS approval, EKPC booked the regulatory asset without the Commission's approval. The

<sup>&</sup>lt;sup>52</sup> Application, Exhibit 14, Direct Testimony of Michelle K. Carpenter (filed Apr. 1, 2021) at 12, lines 5–7. Scott Direct Testimony at 30.

<sup>&</sup>lt;sup>53</sup> Scott Direct Testimony, Exhibit ISS-1, Schedule 1.26, Amortize Spurlock 2019 Regulatory Asset for Major Maintenance at 1.

Commission never envisioned EKPC would seek ordinary regulatory deferral accounting for a single year's expense from RUS, nor did the Commission direct it to do so. There is a material difference between the request EKPC made to the Commission (and for which the Commission said RUS would be the better avenue for relief) and the one sought, and ultimately received, from RUS. EKPC's actions in booking the regulatory asset for 2019 expenses is in direct violation of the Commission's Order in Case No. 2016-00180, which put all jurisdictional utilities on notice that Commission authorization is required before a utility can record a regulatory asset for expenses that meet one or more of the four criteria the Commission uses to determine the reasonableness of a request to authorize the establishment of a regulatory asset.<sup>54</sup>

EKPC established and subsequently requested rate recognition of a regulatory asset that was never approved by the Commission. There are significant financial consequences for EKPC if the Commission denies EKPC's request to amortize or recover this regulatory asset. If EKPC were an investor-owned utility, then its shareholders would bear the financial burden of a denial to recover in the regulatory asset balance in rates. However, as a generation and transmission cooperative, the financial burden would fall on EKPC's Owner-Members and their retail customers if the Commission denied recovery of this regulatory asset balance. Because a denial of recovery of this regulatory asset would harm customers, the Commission reluctantly finds that it should approve, *ex post facto*, for ratemaking purposes, the booking and amortization associated with the

<sup>&</sup>lt;sup>54</sup> Case No. 2016-00180, Application of Kentucky Power Company for an Order Approving Accounting Practices to Establish Regulatory Assets and Liabilities Related to the Extraordinary Expenses Incurred by Kentucky Power Company in Connection with Two 2015 Major Storm Events (Ky. PSC Nov. 3, 2016) at 9.

regulatory asset established for the Spurlock 2019 major maintenance expenses. However, this approval after the fact does not impact the reality that EKPC violated a Commission Order when it booked this regulatory asset without prior Commission approval. Therefore, the Commission also finds that a future, separate proceeding should be established, with EKPC's officers and directors named as parties, so that the issue of the violation of a Commission Order may be properly investigated.

### Revenue Requirement Summary

After considering the pro forma adjustment to the amortization of the Cancelled Smith 1 regulatory asset in addition to the reduction of rate case expense to actual expenditures, EKPC's adjusted Required Revenue Increase from Base Rates is as follows:

|  | Commission Adjustments                              |
|--|---|
| Increase Stipulated in Settlement Proposal Decrease to Normalize Amortization Period of Smith 1 Regulatory Asset to Test Year Level Decrease Rate Case Expense to Filed Actuals Less: Gross Up | \$ 38,343,000<br>(1,911,276)<br>(72,501)<br>(3,968) |
| Required Revenue Increase from Base Rates  | 36,355,255  |

#### REVENUE ALLOCATION AND RATE DESIGN

## Cost of Service Study (COSS) and Revenue Allocation

EKPC performed a COSS based on actual plant, expense, and revenue data for the 2019 test year together with pro forma test year adjustments. EKPC's COSS applies an Average and Excess Demand (AED) production cost allocation methodology as a means of classifying production plant and to allocate the demand-related production costs to rate classes. The Attorney General/KIUC's witness, Stephen J. Baron, filed testimony asserting that the filed COSS contained three errors. First, Mr. Baron stated that EKPC

erroneously applied 15 minute coincident peak demands to allocate production demand and transmission costs for all rate classes except for Nucor, where 15-minute billing demands were applied. Mr. Baron argued that hourly demands are the basis for generation and transmission planning and thus should be applied. Second, Mr. Barron noted that the AED methodology was incorrectly applied to the COSS and this error resulted in double counting of the excess demand. Third, Mr. Baron averred that the COSS failed to annualize the Nucor expansion. This expansion was online for only one month of the 2019 test year, and EKPC used this one month as the peak expense allocator resulting in a larger expense being allocated to Nucor. Baron also included recommendations to include the Fuel Adjustment Clause (FAC) and ES in the COSS as its removal fails to reflect the cost imbalances associated with different on-peak and off-peak usage patterns among the rate classes.

In response, EKPC provided a revised COSS with adjustments made to correct for the three primary errors alleged by Mr. Baron, concurring that the revisions are consistent with industry and EKPC practice.<sup>61</sup> EKPC rejected the proposed adjustments regarding

<sup>&</sup>lt;sup>55</sup> Direct Testimony of Stephen J. Baron (Baron Direct Testimony) (filed July 29, 2021) at 10.

<sup>&</sup>lt;sup>56</sup> Baron Direct Testimony at 13.

<sup>&</sup>lt;sup>57</sup> *Id.* at 19.

<sup>&</sup>lt;sup>58</sup> *Id.* at 9.

<sup>&</sup>lt;sup>59</sup> *Id.* at 25.

<sup>&</sup>lt;sup>60</sup> Id. at 29; and Attorney General/Nucor's Post-Hearing Brief (filed Aug. 24, 2021) at 4-5.

<sup>&</sup>lt;sup>61</sup> Rebuttal Testimony of Richard J. Macke (Macke Rebuttal Testimony) (filed July 28, 2021), Exhibit RJM-4.

the FAC and ES stating that it is not necessary or consistent with prior treatment of the standalone recovery mechanism of the FAC by the Commission.<sup>62</sup>

The results of the revised COSS illustrate the amount of cross-subsidization between the rate classes. The revised COSS indicated no existing revenue requirement deficiency for Rates B, C, or TGP. The results for Rate G estimated a revenue deficiency. For Rate Class E, the COSS results indicated that approximately 95 percent of the increase was necessary to cover the cost to serve. The Settlement allocates 2.6 percent of the revenue increase to Rates B, C, and G, Special Contract, and Steam with the remaining revenue allocated to Rate E.

The Commission accepts EKPC's revised COSS and EKPC's proposal to use the AED method as a guide to determining revenue allocation. The Commission recognizes that the Settlement does not follow the COSS results and thus continues to allow for the alleged cross-subsidization between the rate classes. The Commission also recognizes that the class which benefits from the Settlement's revenue allocation, Rate Class E, contains the bulk of the sales and is comprised of residential and commercial end-use customers. Therefore, the Commission finds that, while the revenue allocation included in the Settlement does not necessarily align with the revised COSS, it reduces the increase to Rate E and this benefit will accrue to the majority of the end-use customers and the residential class, and therefore finds the Settlement revenue allocation to be reasonable.

<sup>&</sup>lt;sup>62</sup> Macke Rebuttal Testimony at 6.

<sup>63</sup> Macke Rebuttal Testimony, Exhibit RJM-4 at 17.

Consistent with the spirit of the Settlement, the Commission finds that the reduction in EKPC's Settlement revenue increase, as found reasonable elsewhere in this Order, should be allocated to Rate Class E with all other Rate Classes remaining unchanged from the allocation set forth in the Settlement. Based on the reduction in EKPC's Settlement revenue increase, the Commission finds that the revenue increase should be allocated as follows:

| Line |                                     | <b>Present Rates</b> | Commission Adjustment |            |            |
|------|-------------------------------------|----------------------|-----------------------|------------|------------|
| No.  | Description                         | Amount               | Amount                | Increase   | As Percent |
| 1    |                                     | \$                   | \$                    | \$         |            |
| 2    | <b>Totals Revenues by Rate</b>      |                      |                       |            |            |
| 3    | Rate B                              | 59,815,719           | 61,364,392            | 1,548,673  | 2.6%       |
| 4    | Rate C                              | 17,153,311           | 17,605,550            | 452,238    | 2.6%       |
| 5    | Rate E                              | 664,081,280          | 696,480,246           | 32,326,320 | 4.9%       |
| 6    | Rate G                              | 25,516,274           | 26,179,595            | 663,320    | 2.6%       |
| 7    | Contract                            | 41,786,791           | 42,872,821            | 1,086,030  | 2.6%       |
| 8    | Steam                               | 10,716,264           | 10,994,937            | 278,674    | 2.6%       |
| 9    | Rate TGP                            | 6,349,849            | 6,349,849             | -          | 0.0%       |
| 10   | <b>Sub-Total COS Based Revenues</b> | 825,419,487          | 863,762,487           | 36,355,255 | 4.4%       |
| 11   | Rate H                              | 49,170               | 49,170                |            | 0.0%       |

| 13   | <b>Total Revenues by Rate</b>       | 824,358,804          | 862,701,804 \$        | 36,355,255 | 4.4%       |

## Rate Design

The revised COSS illustrated that current demand rates are below cost to serve as compared to energy rates. EKPC proposed a 2:1 ratio for the percent increase to the demand rate to energy rate in order to maintain existing rate design as well as to remove some of the subsidization between the demand and energy rates. <sup>64</sup> EKPC maintained that the proposed rate design avoided rate distortion and possible erosion of EKPC Owner-Member's revenue margin that may result in the pass through of the wholesale rate increase to the Owner-Members.

<sup>&</sup>lt;sup>64</sup> Application, Exhibit 16, Direct Testimony of Richard J. Macke (filed Apr. 1, 2021) at 18–19.

The Commission finds this proposed rate design to be reasonable as it recognizes the COSS results while balancing the impact upon its Owner-Members and maintains the rate design for Rate E.

#### OTHER ISSUES

## Generation Maintenance Tracker

As discussed above, in the Settlement, the parties accepted the adjustment proposed by Attorney General/Nucor's witness, Lane Kollen, to normalize generation maintenance over a five-year period of 2015–2019. The parties also agreed to a generation maintenance tracking mechanism. EKPC will track and compare the annual actual generation maintenance expenses to the normalized expense in base rates (\$81,067,000). If the annual actual expense is higher than the normalized expense, EKPC will record a regulatory asset for 75 percent of the difference. If the annual actual expense is lower than the normalized expense, EKPC will record a regulatory liability for 75 percent of the difference.

In support of the proposed mechanism, EKPC argued that the calculation of this mechanism is so straightforward that it would be a waste of Commission time and resources to have an annual docket for the generation maintenance expense tracking mechanism. Instead, EKPC would file an annual report whether it would record a regulatory asset or regulatory liability, with supporting calculation. In EKPC's next base rate case, the net accumulated balance would be amortized and either collected from or returned to EKPC Owner-Members.

The Commission is concerned that a wholesale approval of the General Maintenance Tracker as discussed and agreed upon in the Settlement limits Commission

oversight of the regulatory asset/liability accounting that will occur as a result of the tracker. The Commission also recognizes that it has limited staff and resources to establish an annual case to determine the reasonableness of the accounting treatment of the expenditures that would be eligible for the mechanism.

Based upon a review of the case record, the Commission finds that the Generation Maintenance Tracker is reasonable and should be approved, but subject to the condition that EKPC should establish a separate regulatory asset account to record the annual entries. Further, the Commission reserves the right to review the generation maintenance expenses that are eligible for this mechanism when EKPC requests to amortize the regulatory asset or regulatory liability in its next base rate case.

#### Earnings Mechanism

In the Settlement, the parties agreed to an earning mechanism that would return excess margins to customers in the form of a bill credit if EKPC achieves a per book margin in excess of 1.40 TIER in any calendar year. EKPC proposed to file an annual report on or before April 30 each year with the calculation. The parties agreed that the earnings mechanism would remain in place until EKPC's next base rate case.

Also in the Settlement, the parties proposed to allocate the bill credit based upon the percentage of each rate class's total revenue. However, the Settlement was silent as to how the bill credits will be applied, such as by kWh sales or by the number of customer accounts. The Settlement was also silent to the frequency of the bill credit, specifically whether it is a monthly or annual bill credit.

Based upon the case record, the Commission finds that the proposed earnings mechanism is reasonable and should be approved as presented in the settlement. EKPC

should file the annual filing as of April 30. At the time of the first filing, the Commission will initiate a proceeding to review the reasonableness and determine a reasonable frequency for a bill credit and how the bill credits will be applied to customer accounts.

#### **Depreciation Rates**

In the Settlement, the parties agreed that EKPC's depreciation study, depreciation rates, and inclusion of interim retirement and terminal net salvage should be approved as filed. EKPC's last depreciation study was conducted in 2005. In this proceeding, EKPC requested approval of its most recent deprecation study for plant as of December 31, 2019. The 2019 depreciation study including net terminal salvage, interim retirements, and revised service lives.

In rebuttal testimony, EKPC's witness, Mr. Spanos, explained that including net terminal salvage and interim retirements in depreciation is consistent with and approved by the Federal Energy Regulatory Commission's (FERC) USoA.<sup>65</sup> Mr. Spanos further explained that deferring such components results in intergenerational inequity, because those customers who received the benefit of the asset would not be the same customers who pay the cost of those assets.<sup>66</sup>

Also in rebuttal testimony, EKPC's witness, Craig A. Johnson, explained that the basis for the 35-year estimated service lives of Smith Units 1–3 is largely due to the limited availability of replacement parts.<sup>67</sup> Mr. Johnson further explained that there are only seven units similar to Smith Units 1–3 in operation. Mr. Johnson maintained the Smith

<sup>&</sup>lt;sup>65</sup> Rebuttal Testimony of John J. Spanos (Spanos Rebuttal Testimony) (filed July 28, 2021) at 2–4.

<sup>&</sup>lt;sup>66</sup> Spanos Rebuttal Testimony at 5.

<sup>&</sup>lt;sup>67</sup> Rebuttal Testimony of Craig A. Johnson (Johnson Rebuttal Testimony) (filed July 28, 2021) at 4–6.

Units 1–3 have reduced service lives because there is only one vendor, the original equipment manufacturer (OEM), that supports that type of unit and that the OEM does not manufacture all of the necessary parts of the unit.<sup>68</sup> Mr. Johnson also claimed that the frequency of dispatch of Smith Units 1–3 impacts its service life.<sup>69</sup> EKPC witnesses explained that the basis for the assigned 40-year service lives for Smith Units 4–10 and Bluegrass Station are consistent with the lifespan estimates for similar facilities used by other utilities and are appropriate, supported by an attached summary of the 2020 Form EIA-860 Data included with Mr. Spanos's rebuttal testimony.<sup>70</sup>

Based upon the case record, the Commission finds that the depreciation study is reasonable and should be approved because the methodology employed in the study is consistent with the FERC USoA definition of depreciation <sup>71</sup> and the USoA General Instruction 22-A. <sup>72</sup>

## Relief from Reporting Requirements

The parties agreed that the Commission should grant EKPC's request for relief from certain filing requirements as follows:

1. Monthly financial reporting related to 12-month margins, budgets, TIER, DSC, and variable interest rates on loans that were established in Case Nos. 1995-

<sup>&</sup>lt;sup>68</sup> Johnson Rebuttal Testimony at 4–5.

<sup>&</sup>lt;sup>69</sup> *Id.* at 6.

<sup>&</sup>lt;sup>70</sup> Spanos Rebuttal Testimony, Attachment\_A-EIA\_Data\_through\_2020.xlsx.

<sup>&</sup>lt;sup>71</sup> Spanos Rebuttal Testimony at 2.

<sup>&</sup>lt;sup>72</sup> *Id.* at 3.

00135<sup>73</sup> and 2006-00472.<sup>74</sup> EKPC asserted that the reports are no longer necessary based upon changed circumstances. EKPC explained that the purpose for filing the monthly reports was to monitor the impact of interest rate volatility, dating from 1995, and to monitor EKPC's financial condition, dating from 2007. EKPC contended that, since that time, its financial condition has been significantly improved, and therefore the need to monitor EKPC's monthly financial reporting no longer exists. EKPC asserted that variable interest rates no longer have the volatility present in 1995, and thus monitoring is no longer necessary.

- 2. Semi-annual reports summarizing the status of mitigation efforts to reduce the balance of the Smith 1 regulatory asset that was established in Case No. 2010-00449.<sup>75</sup> EKPC explained that the mitigation has been completed and that there are no more physical assets to sell or scrap. With nothing further to report, EKPC requests to be relieved of the reporting obligation.
- 3. Annual report of Dale Station Projects 5 and 10 regulatory assets, detailing the beginning balance, monthly carrying costs, monthly costs by account, and ending balance, that was established in Case No. 2015-00302.<sup>76</sup> EKPC explained that, because

<sup>&</sup>lt;sup>73</sup> Case No. 1995-00135, Application of East Kentucky Power Cooperative, Inc. for the Approval of Financing in the Amount of Approximately \$6,734,000 for Transmission Facilities and System Improvements (Ky. PSC May 26, 1995).

<sup>&</sup>lt;sup>74</sup> Case No. 2006-00472, *General Adjustment of Electric Rates of East Kentucky Power Cooperative, Inc.* (Ky. PSC Dec. 5, 2007).

<sup>&</sup>lt;sup>75</sup> Case No. 2010-00449, Application of East Kentucky Power Cooperative, Inc. for an Order Approving the Establishment of a Regulatory Asset for the Amount Expended on Its Smith 1 Generating Unit (Ky. PSC Feb. 28, 2011).

<sup>&</sup>lt;sup>76</sup> Case No. 2015-00302, Application of East Kentucky Power Cooperative, Inc. for an Order Approving the Establishment of a Regulatory Asset for the Undepreciated Balance of the William C. Dale Generating Station (Ky. PSC Feb. 11, 2016).

it seeks to recover the regulatory asset in this case, the need for the monthly report is extinguished if EKPC's request to amortize the regulatory asset is granted.

- 4. Annual report comparing actual benefits and costs derived from membership in PJM and projected benefits and costs if EKPC was not a member of PJM that was established in Case No. 2012-00169.<sup>77</sup> EKPC maintained that, given the passage of time since the reporting requirement was established, comparing the actual experience to speculation what would have happened if EKPC had not joined PJM is difficult to estimate based on transmission availability assumptions about potential purchases.
- 5. Annual report of prior calendar year interruptions or change in load of two industrial customers established in Case Nos. 2013-00174<sup>78</sup> and 2015-00422.<sup>79</sup> EKPC asserted that the reporting requirements were established to demonstrate that EKPC could follow its interruptible tariff and whether interruptions impacted the industrial customers. EKPC argued that, based upon successful implementation of interruptible tariffs, the reporting requirement is no longer necessary. Neither of the industrial customers filed an objection to the request.

<sup>&</sup>lt;sup>77</sup> Case No. 2012-00169, Application of East Kentucky Power Cooperative, Inc. to Transfer Functional Control of Certain Transmission Facilities to PJM Interconnection, LLC (Ky. PSC Dec. 20, 2012).

<sup>&</sup>lt;sup>78</sup> Case No. 2013-00174, Application of East Kentucky Power Cooperative, Inc. for Approval of a Special Contract between EKPC, Owen Electric Cooperative, and Gallatin Steel Company (Ky. PSC Feb. 27, 2014).

<sup>&</sup>lt;sup>79</sup> Case No. 2015-00422, Application of East Kentucky Power Cooperative, Inc. for the Approval of a Special Contract (Ky. PSC March 14, 2016).

- 6. Annual report on performance of Bluegrass Station that was established in Case No. 2015-00267.80 EKPC asserted that this reporting requirement resulted from concerns about EKPC's risk exposure to potential penalties arising from PJM's capacity performance rules. EKPC argued that, based upon Bluegrass Station's performance and reliability since 2015, this requirement is no longer needed.
- 7. Annual report on the consideration given to price elasticity in the forecasted demand, energy, and reserve margin information already provided in relation to the annual resource assessment filed in compliance with Administrative Case No. 387.81 EKPC maintained that the 2015 study that addresses the issue has not changed and is unlikely to change, and that filing the same information that is unlikely to change is redundant.

Based upon a review of the case record and being otherwise sufficiently advised, the Commission finds that EKPC established good cause to be relieved of the requested reporting requirements, with the exception of the requirement established in Case No. 2012-00169 regarding EKPC's membership in PJM and the requirement established in Case No. 2015-00267 regarding Bluegrass Station. The Commission concludes that the reporting requirements arising from Case Nos. 1995-00135, 2006-00472, 2010-00449, 2015-00302, 2013-00174, and 2015-00422, and from Administrative Case No. 387 have been rendered either unnecessary or moot based upon changed circumstances. By

<sup>&</sup>lt;sup>80</sup> Case No. 2015-00267, Application of East Kentucky Power Cooperative, Inc. for Approval of the Acquisition of Existing Combustion Turbine Facilities from Bluegrass Generation Company, LLC at the Bluegrass Generating Station in Lagrange, Oldham County, Kentucky and For Approval of the Assumption of Certain Evidences of Indebtedness (Ky. PSC Dec. 1, 2015).

<sup>&</sup>lt;sup>81</sup> Administrative Case No. 387, *Electronic Review of the Adequacy of Kentucky's Generation Capacity and Transmission System* (Ky. PSC May 13, 2013), Letter from Commission Executive Director.

separate Order, the Commission will relieve all parties in Administrative Case No. 387 from the annual filing requirement related to price elasticity.

The Commission finds that EKPC's request to be relieved of the reporting requirement established in Case No. 2012-00169 regarding its membership in PJM should be denied. The Commission further finds that the reporting requirement should be revised and that, starting in 2022, EKPC should file an annual report identifying benefits and costs that accrue from its PJM membership and comparing these to benefits and costs if EKPC left PJM. This is because the benefits and costs of PJM membership should be monitored to ensure that EKPC Owner-Members, and the Owner-Members' retail customers, accrue actual net benefits from EKPC's PJM membership.

The Commission further finds the request to be relieved of the reporting requirement in Case No. 2015-00267 should be denied because the Commission's concern regarding the risk exposure continues to exist, and thus should be monitored.

#### <u>Demand-Side Management Rider Mechanism</u>

Consistent with requirements established in Case Nos. 2008-00408<sup>82</sup> and 2019-00059,<sup>83</sup> EKPC provided certain information regarding its demand-side management (DSM) programs. Utilities are required to include discussion of cost-effective energy efficiency (EE) resources in each rate case.

<sup>&</sup>lt;sup>82</sup> Case No. 2008-00408, Consideration of the New Federal Standards of the Energy Independence and Security Act of 2007 (Ky. PSC July 24, 2012).

<sup>&</sup>lt;sup>83</sup> Case No. 2019-00059, *Demand–Side Management Filing of East Kentucky Power Cooperative, Inc.* (Ky. PSC Nov. 26, 2019). The Commission required EKPC to file testimony in its next base rate case supporting the value of the DSM programs to EKPC and supporting recovery of DSM program costs in base rates rather than a rider specific to each Owner–Member to address our concern that including DSM program costs in EKPC's base rates was not transparent to Owner–Members' customers and could result in subsidization between the EKPC's Owner-Members.

EKPC explained that it evaluates new and existing EE resources or programs in the same manner as supply-side resources in its supply-side resource evaluation for EKPC's Integrated Resource Plan. 84 EKPC's current programs include Button-Up Weatherization, Touchstone Energy Home, Community Assistance Resources for Energy Savings, Heat Pump Retrofit, and Energy Star Manufactured Home. 85 EKPC asserted that these programs are cost-effective based upon the industry standard California Tests, specifically the Participant and Total Resource Cost Tests. 86 EKPC and its Owner-Members track costs, participation levels, improvement measures, and energy and demand savings through a Distributed Energy Resource software system. 87 EKPC claimed that they are continually evaluating new DSM technologies, specifically retail level Smart Grid initiatives, and recognize the benefits of a well-designed EE or demand response program. 88

Regarding DSM cost recovery and program costs, EKPC reviewed the last six year's program costs and base rate recoveries. EKPC calculated that DSM program costs averaged \$7,800,000 while cost recovery averaged \$6,100,000.89 EKPC noted that cost recovery was close to the \$6,000,000 that was embedded in base rates in Case No. 2010-00167. However, DSM program costs varied from \$3,700,000 to \$10,800,000

<sup>84</sup> Scott Direct Testimony at 4.

<sup>&</sup>lt;sup>85</sup> For a complete description of each program, see Application, Exhibit 18, Direct Testimony of Scott Drake (Drake Direct Testimony) (filed Apr. 1, 2021) at 4–5.

<sup>&</sup>lt;sup>86</sup> Drake Direct Testimony at 5.

<sup>87</sup> See Drake Direct Testimony, Exhibit GSD-1 for the most recent 2019 DSM Report.

<sup>&</sup>lt;sup>88</sup> Drake Direct Testimony at 7.

<sup>89</sup> Scott Direct Testimony at 39–40.

during the six years because costs depended upon the programs offered, the cost structure of each program, and participation. <sup>90</sup> EKPC then reviewed the relative percentages of cost recovery and program costs by each Owner-Member to determine any possible subsidization. On average, for 10 of the 16 Owner-Members, the relative percentage of cost recovery dollars were within 1.5 percent of the program costs; for three Owner-Members, cost recovery was greater than program costs; and for three Owner-Members, program costs were greater than cost recovery. <sup>91</sup> EKPC maintained that, based on these results, although the possibility of subsidization between the Owner-Members is not eliminated, subsidization was not significant. <sup>92</sup>

EKPC asserted that because it cannot separately identify the residential load portion for Rate E for each Owner-Member, a rider was developed specific to each Owner-Member would present significant logistical issues. 93 Further, EKPC argued that a DSM program budget would have to be developed separately for each Owner-Member rather than holistically, which would be inefficient and more costly. 94 EKPC concluded that because subsidization is minimal, the increased complexity of the budgeting, the addition 16 separate riders and true-up mechanisms, and possible rate volatility do not

<sup>&</sup>lt;sup>90</sup> *Id.* at 40.

<sup>&</sup>lt;sup>91</sup> *Id.* at 40–41.

<sup>&</sup>lt;sup>92</sup> *Id.* at 41.

<sup>93</sup> Id. at 42.

<sup>&</sup>lt;sup>94</sup> *Id.* at 42–43.

warrant a change in the current rate structure. 95 EKPC determined that recovery of DSM costs through base rates is still an appropriate, fair and reasonable approach. 96

Based upon a review of the case record, the Commission finds that recovering DSM costs in base rates is reasonable given the increased costs and limited benefits associated with changing the process of DSM cost recovery. As an additional consideration, the Commission notes that, in their respective responses to discovery in their respective pass-through rate cases, the Owner-Members agreed with the current base rate recovery. The Commission directs EKPC to continue evaluating appropriate DSM programs that will minimize the need for more expensive supply-side resources and to continue monitoring the DSM costs between the Owner-Members so that any subsidization continues to be minimal.

#### Tariff Changes

#### Rate C

In revising Rate B, EKPC added clarifying language to the Minimum Monthly Charge section clarifying that the fuel base per kWh included in the description is the fuel base established in the FAC.<sup>98</sup> EKPC later indicated that making the same change in Rate C would also provide clarity to the tariff.<sup>99</sup> The Commission finds that the Minimum

<sup>&</sup>lt;sup>95</sup> *Id.* at 43.

<sup>&</sup>lt;sup>96</sup> Id.

<sup>&</sup>lt;sup>97</sup> See, e.g., Case No. 2021-00104, *Electronic Application of Big Sandy Rural Electric Cooperative Corporation for Pass-Through of East Kentucky Power Cooperative, Inc. Wholesale Rate Adjustment* (filed May 27, 2021), Big Sandy RECC Response to Commission Staff's First Request for Information, Item 1.

<sup>&</sup>lt;sup>98</sup> Scott Direct Testimony at 35.

<sup>&</sup>lt;sup>99</sup> EKPC's Response to Commission Staff's Second Request for Information (Staff's Second Request) (filed May 28, 2021), Item 1.

Monthly Charge section of Rate C should be revised to clarify that the fuel base per kWh included in the description is the fuel base established in the FAC.

#### Rate G

EKPC proposed to establish a minimum demand of 15,000 kW for Rate G, indicating that it has generally limited offering Rate G to owner-members and retail members with a minimum demand of 15,000 kW. 100 EKPC indicated that during its 2008 base rate case, it was advised by consultants that, based on the configuration of rates, the Rate G minimum demand should not go below 15,000 kW. 101 In preparing the instant proceeding, EKPC indicated that it realized that a minimum demand should be established for Rate G and they set the minimum demand at the level it had been following for the last decade or more. 102 EKPC stated that it made exceptions to the informal demand limit in the past and that if circumstances warranted, EKPC would still grant exceptions and work them into special contracts. 103 With EKPC indicating that it is willing to make exceptions to the minimum demand limit, the Commission concludes that instead of setting a limit in the tariff, such decisions should be made when negotiating a special contract. Therefore, the Commission finds that adding a minimum demand limit to the tariff is unreasonable and should be rejected.

EKPC also proposed to include a provision in Rate G that would allow for the possibility of a temporary waiver of the ratchet provision for new or expanding loads.<sup>104</sup>

<sup>&</sup>lt;sup>100</sup> Scott Direct Testimony at 36.

<sup>&</sup>lt;sup>101</sup> EKPC's Response to Staff's Second Request, Item 19.

<sup>&</sup>lt;sup>102</sup> *Id*.

<sup>&</sup>lt;sup>103</sup> August 3, 2021 Hearing Video Transcript (HVT) at 11:36:08.

<sup>&</sup>lt;sup>104</sup> Scott Direct Testimony at 36.

EKPC explained that new customers and existing customers expanding their operations usually experience an initial ramping up period of a year or more. During this period, the actual loads can fluctuate from month to month rather than showing a consistent build up. EKPC states that it is reasonable to temporarily waive the ratchet provisions during a customer's ramping up period to allow them to settle into normal operating conditions. <sup>105</sup>

While the Commission concludes that it may be reasonable to temporarily waive the ratchet provision for new customers or existing customers expanding their operations who will be served under Rate G, the Commission does not conclude that such a provision should be part of a tariff. Such waivers can be included in a special contract with a new customer or existing customer expanding their operations to be served under Rate G. Because these contracts must be filed with the Commission, the Commission can ascertain whether such a provision is reasonable on a case-by-case basis. For these reasons, the Commission finds that adding a provision to Rate G allowing for the possibility of a temporary waiver of the ratchet provision for new or expanding loads is unreasonable and should be rejected.

Finally, EKPC indicated that revising the Minimum Monthly Charge section of Rate G to clarify that the base fuel component included in the description is the fuel base established in the FAC would bring clarity to the tariff. The Commission finds that the Minimum Monthly Charge section of Rate G should be revised to clarify that the base fuel component included in the description is the fuel base established in the FAC.

<sup>&</sup>lt;sup>105</sup> EKPC's Response to Staff's Second Request, Item 20.

<sup>&</sup>lt;sup>106</sup> *Id.*, Item 3.

## Rate H – Wholesale Renewable Energy Program

In its initial application in this proceeding, EKPC filed a revised Rate H, Wholesale Renewable Energy Program, to reflect the discontinuance of Rate A and a minor text revision in the Applicability section. EKPC later discovered that the version of Rate H filed with the application was the tariff that was in effect prior to March 25, 2020, which was when Rate H was amended and approved by the Commission in Case No. 2019-00378. To May 20, 2021, EKPC made a Notice of Filing to replace the version of Rate H filed with the application with the correct version of Rate H. The Commission finds that the replacement of the version of Rate H filed with the application with the updated version of Rate H is reasonable and should be approved.

#### Wholesale Power Invoice

EKPC proposed to revise the Nucor Wholesale Power Invoice to provide for additional metering data points and the deletion of references to certain bill credits that will no longer be in effect. Specifically, EKPC indicated that the addition of "CPS1" and "12 Mo" were references to earlier contract provisions that are no longer in effect. Therefore, EKPC requested that the Commission permit it to withdraw the addition of those two items to the Nucor Wholesale Power Invoice. The Commission finds that EKPC's request to remove the references to "CPS 1" and "12 Mo" is reasonable and should be approved.

#### IT IS THEREFORE ORDERED that:

1. The rates and charges proposed by EKPC are denied.

<sup>&</sup>lt;sup>107</sup> Case No. 2019-00378, Electronic Tariff Filing of East Kentucky Power Cooperative, Inc. to Implement a New Green Energy Option for Non–Residential Retail Customers (Ky. PSC Mar. 25, 2020).

- 2. The provisions in the Settlement, as set forth in Appendix A to this Order, are approved subject to the adjustments approved in this Order.
- 3. The rates and charges for EKPC, as set forth in Appendix B to this Order, are fair, just and reasonable rates for EKPC, and are approved for service rendered on and after October 1, 2021.
- 4. EKPC is authorized to amortize the Smith 1, Dale ES Projects 5 and 10, Dale Asbestos ARO, and Spurlock Maintenance regulatory assets as set forth in this Order.
- 5. EKPC is authorized to establish a Generation Maintenance Tracker as outlined in the Settlement, but, as a term of the establishment of the tracker, EKPC shall establish a separate regulatory asset account to record the annual entries. The Commission reserves the right to review the generation maintenance expenses that are eligible for this mechanism upon such time that EKPC requests to amortize the regulatory asset or regulatory liability in its next base rate case.
- 6. The earnings mechanism outlined in the Settlement is approved as filed. EKPC shall file its first annual filing no later than April 30. The Commission will initiate a proceeding at that time to review the reasonableness and determine a reasonable frequency for a bill credit and how the bill credits will be applied to customer accounts.
- 7. The depreciation study filed by EKPC in the application is approved and the service lives and salvage values therein are approved for EKPC's depreciable assets on and after the date of this Order.

- 8. EKPC's request to be relieved of reporting requirements set forth in Case Nos. 1995-00135, 2006-00472, 2010-00449, 2015-00302, 2013-00174, and 2015-00422 is granted.
- 9. EKPC's request to be relieved of price elasticity reporting requirements set forth in Administrative Case No. 387 is granted.
- 10. EKPC's request to be relieved of reporting requirements established in Case No. 2012-00169 is denied. EKPC's reporting requirement its PJM membership is modified as set forth above. Beginning in 2022, EKPC shall file a report by May 31 each year identifying benefits and costs that accrue from its PJM membership and comparing them to benefits and costs if EKPC left PJM.
- 11. EKPC's request to be relieved of reporting requirements established in Case No. 2015-00267 is denied.
- 12. EKPC's revised proposal to amend the Minimum Monthly Charge section of Rate C is approved.
- 13. EKPC's proposal to establish a minimum demand of 15,000 kW for Rate G, is denied.
- 14. EKPC's proposal to add a provision to Rate G allowing for the possibility of a temporary waiver of the ratchet provision for new or expanding loads is denied.
- 15. EKPC's revised proposal to amend the Minimum Monthly Charge section of Rate G is approved.
- 16. EKPC's revised proposal to replace the version of Rate H filed with the application with the updated version of Rate H is approved.

- 17. EKPC's revised proposal to remove the references to "CPS 1" and "12 Mo" is approved.
- 18. Except for the tariffs that have been modified or denied in this Order, EKPC's proposed tariffs as originally filed and revised by the Settlement are approved as filed.
  - 19. EKPC shall continue to recover DSM costs in base rates.
- 20. Within 20 days of the date of this Order, EKPC shall file with the Commission, using the Commission's electronic Tariff Filing System, its revised tariffs as set forth in this Order reflecting that they were approved pursuant to this Order.
  - 21. This case is closed and removed from the Commission's docket.

# JOINT STIPULATION, SETTLEMENT AGREEMENT AND RECOMMENDATION

On April 1, 2021, East Kentucky Power Cooperative, Inc. ("EKPC") tendered its Application with the Kentucky Public Service Commission ("Commission"), pursuant to KRS 278.180, KRS 278.190 and other applicable law, for an adjustment of its wholesale rates, approval of a depreciation study, amortization of certain regulatory assets and other general relief ("Application"). The Application was accepted for filing on April 6, 2021. Motions for intervention by the Attorney General ("AG"), Nucor Steel Gallatin ("Nucor") and AppHarvest Morehead Farm, LLC ("AppHarvest") were granted on March 5, 2021, March 25, 2021 and April 27, 2021, respectively. EKPC, the AG, Nucor and AppHarvest are collectively referred to herein as the "Parties." The Parties have filed testimony supporting their respective positions relating to EKPC's Application. The Parties and the Commission Staff have also engaged in substantial discovery of the Parties' respective positions by issuing numerous information requests to which the Parties have responded.

The Parties, representing diverse interests and viewpoints, have reached a complete settlement of all the issues raised in this proceeding and have executed this Joint Stipulation,

Settlement Agreement and Recommendation ("Stipulation") for purposes of documenting and submitting their agreement to the Commission for consideration and approval. It is the intent and purpose of the Parties to express their agreement on a mutually satisfactory resolution of all issues in the instant proceeding.

The Parties understand that this Stipulation is not binding upon the Commission, but believe it is entitled to careful consideration by the Commission. The Parties agree that this Stipulation, viewed in its entirety, constitutes a reasonable resolution of all issues in this proceeding. The Parties request that the Commission issue an Order approving this Stipulation in its entirety pursuant to KRS 278.190, including the rate increase, rate structure, depreciation study, amortization of regulatory assets, relief from certain existing reporting obligations, approval of textual changes to tariffs and recovery of rate case expense as described herein. The request is based upon the belief that the Parties' participation in settlement negotiations and the materials on file with the Commission adequately support this Stipulation. Adoption of this Stipulation will eliminate the need for the Commission and the Parties to expend significant resources in litigation of this proceeding and will eliminate the possibility of, and any need for, rehearing or appeals of the Commission's final Order herein.

NOW, THEREFORE, for and in consideration of the mutual premises set forth above and the terms and conditions set forth herein, the Parties agree as follows:

1. <u>Revenue Increase</u>: The Parties agree that EKPC's adjusted base rate revenue requirement is \$481.565 million. This represents an increase of \$38.343 million over the test year revenue that would be collected at current rates. A summary of the adjustments agreed to by the Parties to arrive at this revenue increase are set forth in Exhibit A to this Stipulation.

2. <u>Revenue Allocation</u>. The Parties agree that that the foregoing revenue requirement will be allocated as follows:

| Rate Class             | Increase in Dollars | Percentage |
|------------------------|---------------------|------------|
|                        |                     | Increase   |
| Rate E                 | \$34,314,065        | 5.20%      |
| Rate B                 | \$1,548,673         | 2.60%      |
| Rate C                 | \$452,238           | 2.60%      |
| Rate G                 | \$663,320           | 2.60%      |
| Contract Steam         | \$278,674           | 2.60%      |
| Large Special Contract | \$1,086,030         | 2.60%      |
| Pumping Stations       | \$0                 | 0.00%      |
| Total                  | \$38,343,000        |            |

- 3. <u>Base Rate Times Interest Earned Ratio ("TIER") Ratio</u>: The Parties agree that EKPC should be authorized to continue to earn a 1.50 TIER for base rates.
- 4. <u>Environmental Surcharge</u>: The Parties agree that EKPC's TIER for its environmental surcharge should be reduced to 1.475. The Parties further agree that all changes for depreciation rates, interest expense for Construction Work in Progress ("CWIP"), and TIER would first be reflected in the monthly surcharge filing for the Expense Month of October 2021, which will be filed with the Commission on November 19, 2021. The Parties understand that the adjustments to CWIP and TIER will reduce revenues collected by EKPC through the environmental surcharge by \$7.1 million annually.
- 5. <u>Generation Maintenance Regulatory Asset/Liability</u>. The Parties agree that the normalized generation maintenance expense reflected in Exhibit A is \$81.067 million per year. Beginning with calendar year 2022, and in each year thereafter, EKPC will track its actual generation maintenance expense and record a regulatory asset for seventy-five percent (75%) of all expenses in excess of the normalized amount and, if the actual annual generation maintenance expense is less than the normalized generation maintenance expense, record a regulatory liability for seventy-five percent (75%) of the difference between the actual annual generation maintenance

expense and the normalized generation maintenance expense. EKPC agrees to make an annual filing with the Commission (on or before April 30<sup>th</sup> of each year) which sets forth its calculation of any regulatory asset or liability recorded for the prior year, and including a cumulative net calculation of all such assets or liabilities. In EKPC's next base rate case, the cumulative regulatory asset or regulatory liability shall be amortized and either recovered from, or returned to, EKPC's Owner-Members as appropriate over a reasonable period of time.

6. <u>Earnings Mechanism</u>: The Parties agree that EKPC should return any excess margins to its Owner-Members for contemporaneous pass-through to ratepayers in the form of a bill credit in the event that EKPC achieves per book margin in excess of a 1.40 TIER in any calendar year. Any excess margins will be returned to EKPC's Owner-Members for contemporaneous pass-through to ratepayers in the form of a bill credit that is allocated based upon the percentage of each rate class's total revenue for the most recent calendar year. EKPC agrees to make an annual filing with the Commission which sets forth its calculations of margins and any required bill credit on or before April 30<sup>th</sup> of each year. This earnings mechanism will remain in place until EKPC's base rates are next adjusted. EKPC will file a tariff for Commission review within thirty (30) days of the Commission entering a final Order approving this Stipulation.

# 7. <u>AppHarvest Matters</u>:

a. <u>Demand Response</u>: EKPC agrees to work in good faith with AppHarvest to develop a demand response program whereby AppHarvest will be able to participate in PJM Interconnection, LLC's ("PJM") demand response program with EKPC acting as its Curtailment Service Provider. EKPC shall charge a reasonable administrative fee to cover its costs for any such program. The use of the term "demand response" in this section includes, but is not limited

to, energy efficiency programs. Any program developed by AppHarvest and EKPC must be submitted to and approved by the Commission prior to being implemented.

- b. AgriTech Tariff: EKPC agrees to work in good faith with AppHarvest to develop an AgriTech Tariff that considers the unique energy requirements of large scale indoor agricultural technology. In particular, but without limitation, the Parties will study whether a reasonable and cost-effective commercial and industrial energy efficient lighting program similar to the general commercial and industrial lighting demand side management program that was terminated by EKPC in 2019 may be reinstated in this context. Any AgriTech Tariff must be submitted to and approved by the Commission.
- c. <u>Pass-Through Rate Mechanism</u>: Nothing in this Stipulation limits the ability of AppHarvest to litigate the issues it raised in the pass-through case filed by Fleming-Mason Energy Cooperative, Inc. and docketed by the Commission as Case No. 2021-00109.
- 8. <u>TGP Special Contract</u>: The Parties agree that EKPC shall inquire and consult with Fleming-Mason Energy Cooperative, Inc. and Taylor County Rural Electric Cooperative Corporation regarding the status and reasonableness of two Special Industrial Power Agreements with Tennessee Gas Pipeline Company.
- 9. Other Items: The Parties agree that, except as limited herein, all other requests in EKPC's Application should be approved, including, without limitation:
- a. <u>Depreciation Study</u>: EKPC's depreciation study and related accounting treatments should be approved with an effective date for the new deprecation rates to be the same day that EKPC's new rates become effective.

- b. <u>Amortization of Certain Regulatory Assets</u>: The four regulatory assets identified in EKPC's Application are acknowledged to be included within its revenue requirement and will be approved as proposed:
- i. Cancellation of the Smith Unit 1 generation station authorized in Case No. 2010-00449, consistent with the provisions of the Stipulation Agreement approved in Case No. 2015-00358;
- ii. Retirement of the William C. Dale Generation Station ("Dale Station"), specifically certain assets recovered through EKPC's environmental surcharge, pursuant to the Commission's Order in Case No. 2015-00302;
- iii. Depreciation and accretion expense associated with the Dale Station asbestos abatement asset retirement obligation, pursuant to Case No. 2014-00432; and
- iv. 2019 Major Maintenance expenses at the Spurlock generation station, as permitted by the Rural Utilities Service accounting treatment and consistent with the Commission's Order in Case No. 2019-00146.
- c. <u>Relief From Certain Existing Reporting Obligations</u>: EKPC should no longer be required to make certain informational filings with the Commission that appear to be obsolete:
- i. Monthly financial reporting relating to twelve (12) month margins, budgets, the calculation of twelve (12) month TIER and Debt Service Coverages ("DSC") and variable interest rates on outstanding loans;
- ii. Semi-Annual reports summarizing the status of mitigation efforts to reduce the balance of the Smith 1 regulatory asset;

- iii. Annual Report of Dale Station Projects 5 and 10 and Regulatory
  Asset Authority;
- iv. Annual comprehensive report detailing transmission rights, hedging strategies, and PJM benefits and costs;
- v. Annual report detailing the prior calendar year's interruptions or change in load of Nucor Gallatin Steel;
- vi. Annual operating reports setting forth details of the performance of the Bluegrass Station;
- vii. Annual report detailing the prior calendar year's interruption of AGC; and
- viii. Annual report discussing the consideration given to price elasticity in the forecasted demand, energy and reserve margin information already provided in relation to the annual resource assessment filed in compliance with Administrative Case 387;
- d. <u>Tariff Changes</u>: The Parties agree all proposed textual changes to EKPC's tariffs should be approved as set forth in the Application.
- e. <u>Rate Case Expense</u>: The Parties agree that EKPC should be authorized to recover its reasonable rate case expense (final amount to be filed within fifteen days following the conclusion of any hearing on EKPC's Application) on an amortized basis over three (3) years.
- 10. <u>Proof of Revenue</u>: Attached to this Stipulation as Exhibit B are updated tariffs that reflect the revenue requirement and revenue allocation set forth herein. Attached to this Stipulation as Exhibit C are proof-of-revenue sheets, showing that the rates set forth in Attachment B, plus projected off-system sales, leased property income and other operating revenues, will generate the

revenue needed to recover the Company's test year revenue requirement to which the Parties have agreed.

- 11. <u>Filing of Stipulation</u>: Following the execution of this Stipulation, the Parties shall cause the Stipulation to be filed with the Commission with a request to the Commission for consideration and approval of this Stipulation so that EKPC may begin billing under the approved adjusted rates for service rendered on and after October 1, 2021.
- 12. <u>Commission Approval</u>: The Parties to this Stipulation shall act in good faith and use their best efforts to recommend to the Commission that this Stipulation be accepted and approved. Each Party hereto waives all cross-examination of the witnesses of the other Party hereto except in support of the Stipulation or unless the Commission fails to adopt this Stipulation in its entirety. Each Party further stipulates and recommends that the Notice of Intent, Notice, Application, direct testimony, rebuttal testimony, pleadings and responses to data requests filed in this proceeding be admitted into the record. The Parties further agree and intend to support the reasonableness of this Stipulation before the Commission, and to cause their counsel to do the same in this proceeding and in any appeal from the Commission's adoption and/or enforcement of this Stipulation. If the Commission issues an order adopting this Stipulation in its entirety, each of the Parties hereto agrees that it shall file neither an application for rehearing with the Commission, nor an appeal to the Franklin County Circuit Court with respect to such order.
- 13. <u>Effect of Non-Approval</u>: If the Commission does not accept and approve this Stipulation in its entirety or imposes any additional conditions or requirements upon the signatory Parties, then: (a) any Party may elect, in writing docketed in this proceeding, within ten (10) days of such Commission Order, that this Stipulation shall be void and withdrawn by the Parties hereto from further consideration by the Commission and neither Party shall be bound by any of the

provisions herein; and (b) each Party shall have the right, within twenty (20) days of the Commission's Order, to file a petition for rehearing, including a notice of termination of and withdrawal from the Stipulation; and, (c) in the event of such termination and withdrawal of the Stipulation, neither the terms of this Stipulation nor any matters raised during the settlement negotiations shall be binding on any of the signatory Parties to this Stipulation or be construed against any of the signatory Parties. Should the Stipulation be voided or vacated for any reason after the Commission has approved the Stipulation and thereafter any implementation of the terms of the Stipulation has been made, then the Parties shall be returned to the *status quo* existing at the time immediately prior to the execution of this Stipulation.

- 14. <u>Commission Jurisdiction</u>: This Stipulation shall in no way be deemed to divest the Commission of jurisdiction under Chapter 278 of the Kentucky Revised Statutes.
- 15. <u>Successors and Assigns</u>: This Stipulation shall inure to the benefit of and be binding upon the Parties hereto, their successors and assigns.
- 16. <u>Complete Agreement</u>: This Stipulation constitutes the complete agreement and understanding among the Parties hereto, and any and all oral statements, representations or agreements made prior hereto or contained contemporaneously herewith shall be null and void and shall be deemed to have been merged into this Stipulation.
- 17. <u>Implementation of Stipulation</u>: For the purpose of this Stipulation only, the terms are based upon the independent analysis of the Parties to reflect a just and reasonable resolution of the issues herein and are the product of compromise and negotiation. Notwithstanding anything contained in the Stipulation, the Parties recognize and agree that the effects, if any, of any future events upon the operating income of EKPC are unknown and this Stipulation shall be implemented as written.

- 18. Admissibility and Non-Precedential Effect: Neither the Stipulation nor any of the terms set forth herein shall be admissible in any court or administrative agency, including the Commission, except insofar as such court or agency is addressing litigation arising out of the implementation of the terms herein or the approval of this Stipulation. This Stipulation shall not have any precedential value in this or any other jurisdiction.
- 19. <u>No Admissions</u>: Making and entering into this Stipulation shall not be deemed in any respect to constitute an admission by any Party that any computation, formula, allegation, assertion or contention made by any Party in these proceedings is true or valid. Nothing in this Stipulation shall be used or construed for any purpose to imply, suggest or otherwise indicate that the results produced through the compromise reflected herein represent fully the objectives of a Party.
- 20. <u>Authorizations</u>: The signatories hereto warrant that they have informed, advised, and consulted with the respective Parties hereto in regard to the contents of this Stipulation, and based upon the foregoing, are authorized to execute this Stipulation on behalf of the Parties hereto.
- 21. <u>Commission Approval</u>: This Stipulation is subject to the acceptance of and approval by the Commission.
- 22 <u>Interpretation of Stipulation</u>: This Stipulation is a product of negotiation among all Parties hereto, and no provision of this Stipulation shall be strictly construed in favor of or against any Party.
  - 23. <u>Counterparts</u>: This Stipulation may be executed in multiple counterparts.
- 24. <u>Future Proceedings</u>: Nothing in this Stipulation shall preclude, prevent or prejudice any Party hereto from raising any argument/issue or challenging any adjustment in any future rate case proceeding of EKPC.

#### Rate ES - Environmental Surcharge

#### Applicability

In all territories of owner-members of EKPC

#### Т

# **Availability**

This rate schedule shall apply to EKPC Rates B, C, E, and G and all special contracts with rates subject to adjustment upon the approval of the Commission.

т

#### Rate

The Environmental Surcharge shall provide for monthly adjustments based on a percent of revenues equal to the difference between the environmental compliance costs in the base period and in the current period based on the following formula:

CESF = E(m) / R(m)

MESF = CESF - BESF

MESF = Monthly Environmental Surcharge Factor CESF = Current Environmental Surcharge Factor BESF = Base Environmental Surcharge Factor of 0%

where E(m) is the total of each approved environmental compliance plan revenue requirement of environmental costs for the current expense month and R(m) is the revenue for the current expense month as expressed below.

#### **Definitions**

1. E(m) = [(RB/12)(RORB) + OE – BAS + (Over)Under Recovery

where:

- a. RB is the Environmental Compliance Rate Base, defined as electric plant in service for applicable environmental projects adjusted for accumulated depreciation, CWIP, cash working capital, spare parts and limestone inventory, emission allowance inventory;
- b. RORB is the Rate of Return on the Environmental Compliance Rate Base, designated as the average cost of debt for environmental compliance plan projects approved by the Commission plus application of a times-interest-earned ratio of 1.475;

DATE EFFECTIVE:

Service rendered on and after May 1, 2021

**ISSUED BY:** 

Anthony & Campbell,

President and Chief Executive Officer

Issued by authority of an Order of the Public Service Commission of Kentucky in Case No. 2021-00103 dated \_\_\_\_\_ \_\_\_, 2021.

P.S.C. No. 35, First Revised Sheet No. 21 Canceling P.S.C. No. 35, Original Sheet No. 21

#### Rate ES - Environmental Surcharge (continued)

- c. OE is the Monthly Pollution Control Operating Expenses, defined as the average of the twelve month operating and maintenance expense; depreciation expense, property taxes, insurance expense, emission allowance expense, and consulting fees.;
- d. BAS is the net proceeds from By-Products and Emission Allowance Sales, and;
  - e. (Over) or Under recovery amount resulting from the amortization of amounts determined by the Commission during six-month and two-year reviews and the one-month "true-up" adjustment.
- Total E(m) is multiplied by the "Member System Allocation Ratio" to arrive at Net E(m). The "Member System Allocation Ratio" is based on the ratio of the twelve (12)-month total revenue from sales to owner-members to which the Surcharge will be applied, ending with the current expense month, divided by the twelve (12)-month total revenue from sales to owner-members and off-system sales.
- 3. The revenue R(m) is the average monthly revenue, including base revenues and automatic adjustment clause revenues less Environmental Cost Recovery Surcharge revenues, for EKPC for the twelve (12)-months ending with the current expense month.
- 4. The current expense month (m) shall be the second month preceding the month in which the Environmental Surcharge is billed.

P.S.C. No. 35, Original First Revised Sheet No. 5 Canceling P.S.C. No. 34, Third Revised Sheet No. 7 35, Original Sheet No. 5

#### Rate B

# **Applicability**

In all territories of owner-member cooperatives ("owner-members") of East Kentucky Power Cooperative, Inc. ("EKPC").

# **Availability**

Available to all cooperative associations which are or shall be owner-members of EKPC and end-use retail members ("retail members") willing to which-execute EKPC-approved contracts with the end-use retail members (retail member). for demands of 500 kW or greater and a monthly minimum energy usage equal to or greater than 400 hours per kW of contract demand. Wholesale monthly contract demand shall be agreed between the owner-member and EKPC. The electric power and energy furnished hereunder shall be separately metered for each point of delivery.

# **Applicability**

Applicable to owner-members and retail members willing to contract for demands of 500 kW or greater and a monthly minimum energy usage equal to or greater than 400 hours per kW of contract demand. Wholesale monthly minimum demand shall be agreed between the owner-member and EKPC.

# **Monthly Rate**

|   | <b>4</b>         |
|---|------------------|
| Demand Charge per kW of Billing Demand in<br>Excess of <i>Contract</i> Minimum Demand | \$9.98           |
| Energy Charge per kWh   | \$ .038982 39884 |

#### **Billing Demand**

The billing demand (kilowatt demand) shall be the *contract* minimum demand plus any excess demand. Excess demand occurs when the retail member's highest demand during the current month, coincident with EKPC's system peak (coincident peak), exceeds the *contract* minimum demand. EKPC's system peak demand is the highest average rate at which energy is used during any fifteen (15)-minute interval in the below listed hours for each month and adjusted for power factor as provided herein:

| <u>Months</u>         | Hours Applicable for Demand Billing - EPT |
|-----------------------|---|
| October through April | 7:00 a.m. to 12:00 noon                   |
|                       | 5:00 p.m. to 10:00 p.m.                   |
| May through September | 10:00 a.m. to 10:00 p.m.                  |

#### **Minimum Monthly Charge**

The minimum monthly charge shall not be less than the sum of (a) and (b) below:

Demand Charge per kW of Contract Minimum Demand

- a. The product of the contract minimum demand multiplied by the demand charge, plus
- b. The product of the *contract* minimum demand multiplied by 400 hours and the energy charge per kWh minus the fuel base per kWh as established in the Fuel Adjustment Clause.

#### APPENDIX B

# APPENDIX TO AN ORDER OF THE KENTUCKY PUBLIC SERVICE COMMISSION IN CASE NO. 2021-00103 DATED SEP 30 2021

The following rates and charges are prescribed for the customers in the area served by East Kentucky Power Cooperative, Inc. All other rates and charges not specifically mentioned herein shall remain the same as those in effect under the authority of this Commission prior to the effective date of this Order.

#### WHOLESALE POWER RATE SCHEDULE

### Monthly Rate:

### Metering Point Charge:

- 1. Applicable to each metering point and to each substation
- 2. Charge: \$151.20

### Substation Charge:

1. Applicable to each substation based on size

| ., | ('horaoo' |
|----|-----------|
| ۷. | Charges:  |
|    |           |

| 1,000 to 2,999 kVa substation  | \$ 1,142.40 |
|--------------------------------|-------------|
| 3,000 to 7,499 kVa substation  | \$ 2,873.85 |
| 7,500 to 14,999 kVa substation | \$ 3,456.60 |
| 15,000 and over kVa substation | \$ 5,575.50 |

#### SCHEDULE B

#### Monthly Rate:

| Demand Charge per kW of Contract Demand | \$<br>7.49     |
|---|----------------|
| Demand Charge per kW of Billing Demand  |                |
| in Excess of Contract Demand            | \$<br>9.98     |
| Energy Charge per kWh                   | \$<br>0.039884 |

#### SCHEDULE C

### Monthly Rate:

| Demand Charge per kW of Billing Demand | \$<br>7.49     |
|--|----------------|
| Energy Charge per kWh                  | \$<br>0.039884 |

# <u>SCHEDULE E</u>
